(54) **Title:** HAIR STYLING DEVICE

Fig.2

(57) **Abstract:** This invention relates to a hair styling device (10) having a body (12) defining a chamber (16) adapted to accommodate a length of hair (26), the length of hair being styled whilst it is located within the chamber. The chamber has a primary opening (24) through which the length of hair may pass into the chamber. A rotatable element (34) is provided which is adapted to engage the length of hair adjacent to the primary opening. An elongate member (20) is located within the chamber (16), the length of hair being wound around the elongate member by the rotatable element. The device has a handle (14) which may be gripped by a user, the handle comprising a first handle part (62) and a second handle part (60), the first handle part (62) being connected to the body (12) and the second handle part (60) being movable relative to the first handle part (62). The second handle part can carry a panel (56) which is adapted to close the primary opening (24).
