(54) Title: SYSTEM AND A METHOD FOR PRESENTING RELATED ITEMS TO A USER

(57) Abstract: A system and method for presenting related items to a user. A universal data store is provided which contains a plurality of items. A portion of the items contain relational information that allows relationships between two or more of the plurality of items to be determined. A shell presents a selected item to a user and is configured to utilize the relational information to present one or more items in the data store which are related to the selected item.
