

ABSTRACT

A plurality of grooves (28) are provided in a surface of the array substrate (20) facing the liquid crystal layer (50) to extend along a sealing material, and are spaced apart from each other in a width direction of the sealing material. An alignment film (27) covers
5 surfaces of some or all of the grooves located from a midway portion of the sealing material in a width direction thereof toward a display region (D), and is in contact with the sealing material, and part of the sealing material located from the midway portion in the width direction in a direction away from the display region is directly in contact with the array
10 substrate without the alignment film being provided between the seal material and the array substrate.
