

ABSTRACT

The present invention provides structure protection sheets which can not only dramatically reduce a
5 construction period to place protective layers on surfaces of structures such as concrete but also protect structures for a long time. The present invention relates to a structure protection sheet, including: a polymer cement layer on a side facing a structure; and a resin layer on
10 the polymer cement layer, the structure protection sheet having a thickness distribution of not more than $\pm 100 \mu\text{m}$.
