

APPARATUS, SYSTEM AND METHOD FOR SYNCHRONIZING A PLURALITY OF ELECTRONIC CONTENT

5

ABSTRACT

10 Disclosed are an apparatus, system and method for synchronizing a plurality of electronic content. The apparatus for synchronizing a plurality of electronic content comprises a processor; a database for storing a first electronic content; an input module configured to remotely receive a second electronic content; a memory unit storing codes executable by the processor to convert the first electronic content to a
15 first file format and the second electronic content to a second file format; and a synchronizer module to combine the first electronic content with the second electronic content to form a synchronized content, the synchronized content having a third file format.
