

ABSTRACT

Aspects of present disclosure relate to systems and methods for enabling one or more investors to engage in financial trading across one or more geographies using one or more peer/proxy agents that undertake transactions on behalf of the one or more investors. The proposed system can be implemented in an online architecture to allow an originator to select a peer/proxy agent in a desired geography to enable him to undertake a transaction on behalf of the originator through the trading account of the selected peer/proxy agent, wherein the system can enable completion of the transaction by enabling the originator to transfer the transaction amount to the selected proxy agent.

ABSTRACT

**SYSTEM AND METHOD FOR CONDUCTING ONLINE TRADING THROUGH
PROXY AGENTS**

Aspects of present disclosure relate to systems and methods for enabling one or more investors to engage in financial trading across one or more geographies using one or more peer/proxy agents that undertake transactions on behalf of the one or more investors. The proposed system can be implemented in an online architecture to allow an originator to select a peer/proxy agent in a desired geography to enable him to undertake a transaction on behalf of the originator through the trading account of the selected peer/proxy agent, wherein the system can enable completion of the transaction by enabling the originator to transfer the transaction amount to the selected proxy agent.
