FIG. 1

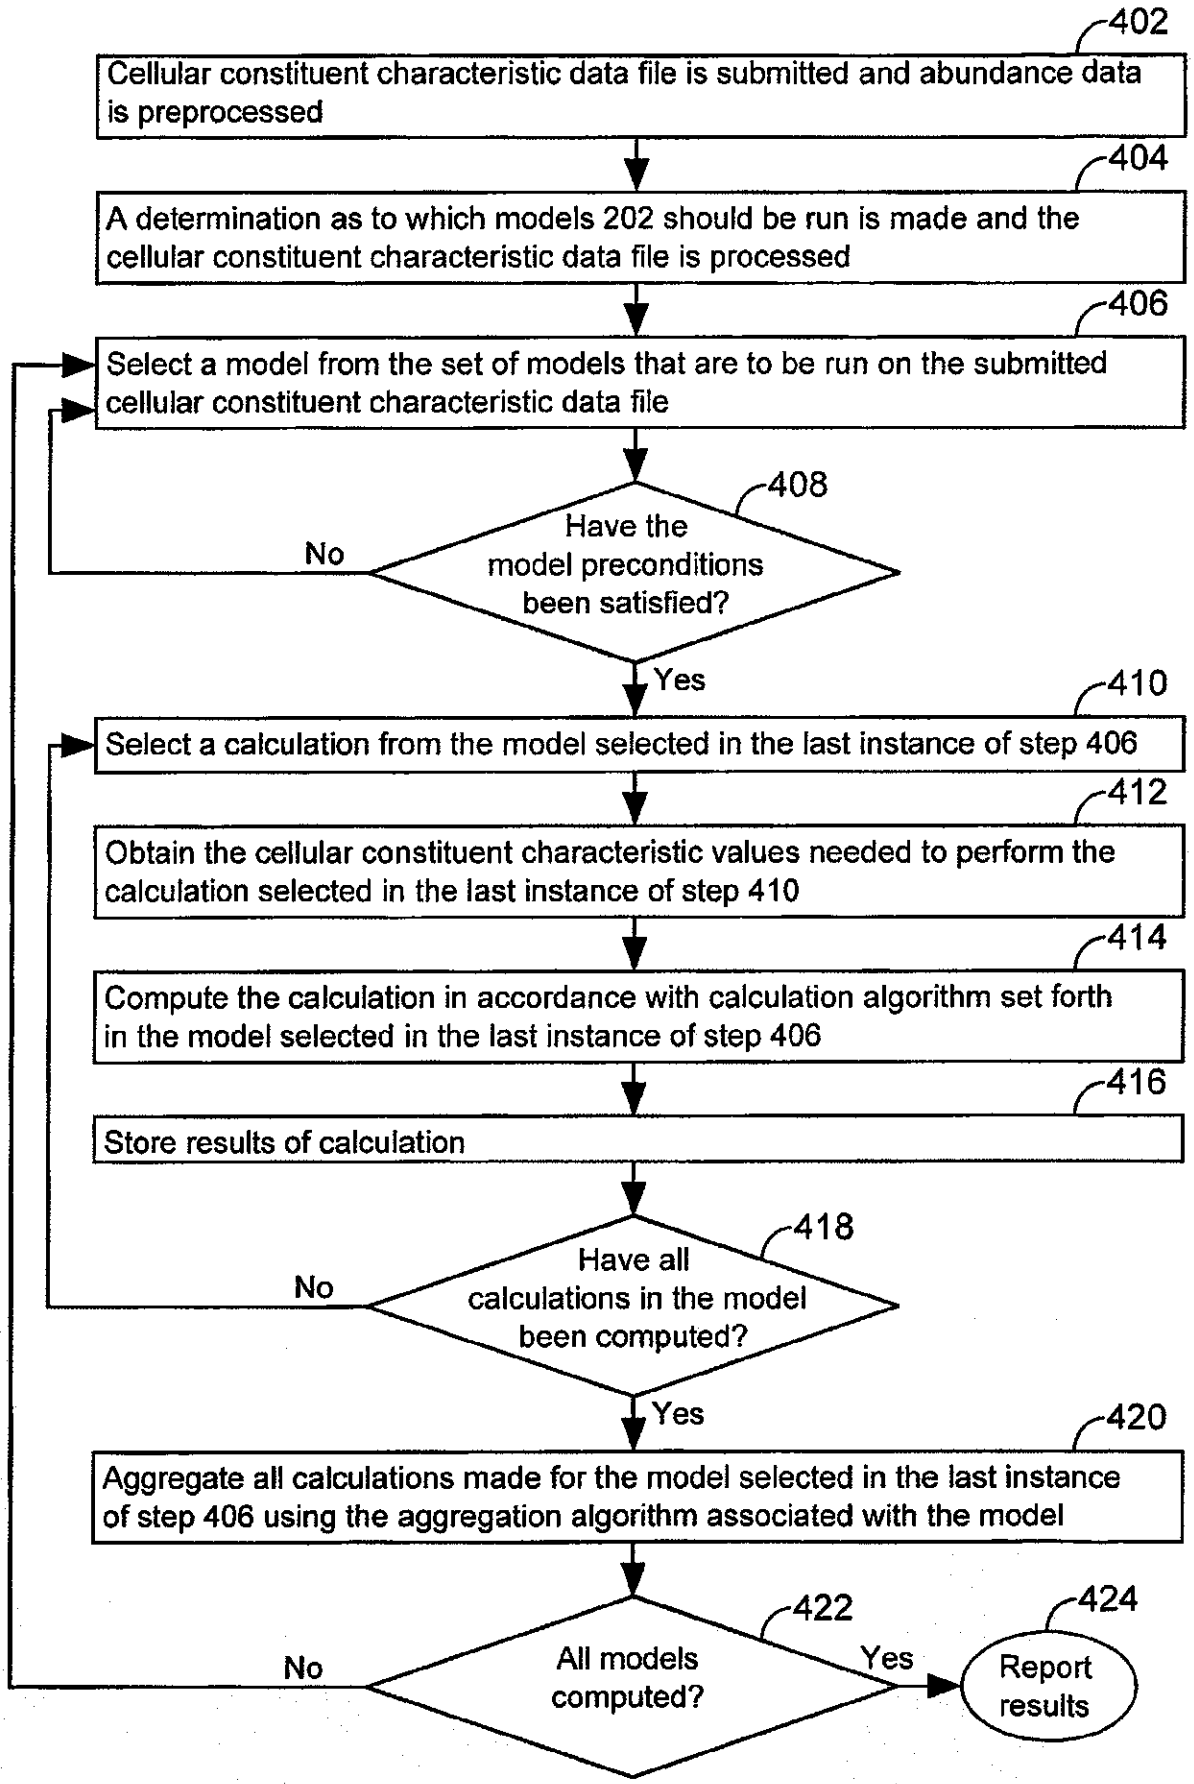

402
Cellular constituent characteristic data file is submitted and abundance data is preprocessed
404
A determination as to which models 202 should be run is made and the cellular constituent characteristic data file is processed
406
Select a model from the set of models that are to be run on the submitted cellular constituent characteristic data file
408
Have the model preconditions been satisfied?
No
Yes
410
Select a calculation from the model selected in the last instance of step 406
412
Obtain the cellular constituent characteristic values needed to perform the calculation selected in the last instance of step 410
414
Compute the calculation in accordance with calculation algorithm set forth in the model selected in the last instance of step 406
416
Store results of calculation
418
Have all calculations in the model been computed?
No
Yes
420
Aggregate all calculations made for the model selected in the last instance of step 406 using the aggregation algorithm associated with the model
422
All models computed?
No
Yes
424
Report results
