

**INFORMATION PROCESSING DEVICE, SUPPORT SYSTEM,
SUPPORT METHOD, AND SUPPORT PROGRAM**

ABSTRACT

An information processing device (100) includes an acquisition unit (120) that acquires an image indicating a board (300) including a name of the board and an inspection target (301 - 309) and a position table (111) as information indicating a correspondence relationship among the name of the board, a position of the inspection target, and a name of the inspection target, a detection unit (130) that detects the board (300) based on the image, detects the name of the board in an image region indicating the board (300), and detects the position of the inspection target (301 - 309) based on the image region indicating the board (300), and an association unit (140) that associates the board (300) and the inspection target (301 - 309) with each other based on the name of the board (300), the position of the inspection target (301 - 309), and the position table (111).
