

**STREAMING OF VISIBILITY ENHANCERS**  
**FROM AIRCRAFT TOWED TARGETS**

**ABSTRACT**

5           The present invention discloses a method of, and apparatus for, deploying a  
fabric banner (7) as a target enhancer from a target pod (2) towed by a cable (5) from  
an aircraft (1) in flight. In order to lessen the mechanical shock on the cable (5) and its  
associated equipment (4), the target pad (2) is first deployed. After a delay time (20-35  
seconds) a time delay circuit (11) then deploys the banner.
