(54) Title: COMBINATION TREATMENT

(57) Abstract: The present invention relates to a pharmaceutical composition comprising a first multispecific antibody (MA1) comprising one binding domain, which specifically binds to CD137 (CD137-BD), and one binding domain, which specifically binds to PDL1 (PDL1-BD); a second multispecific antibody (MA2) comprising at least one binding domain, which specifically binds to a tumor cell associated antigen (TAA-BD), and one binding domain, which specifically binds to CD3 (CD3-BD); and a pharmaceutically acceptable carrier. The present invention further relates to a kit comprising said first multispecific antibody MA1 and said second multispecific antibody MA2. The present invention further relates to the use as well as to methods of use of said pharmaceutical composition or said kit. Finally, the present invention relates to a method for treating a patient suffering from cancer, comprising the step of administering a first multispecific antibody (MA1) comprising one binding domain, which specifically binds to CD137 (CD137-BD), and one binding domain, which specifically binds to PDL1 (PDL1-BD), and a second multispecific antibody (MA2) comprising at least one binding domain, which specifically binds to a tumor cell associated antigen (TAA-BD), and one binding domain, which specifically binds to CD3 (CD3-BD).
