

ABSTRACT

FUNDED PENSION PROCESSING DEVICE, METHOD, AND COMPUTER PROGRAM

[Problem] To provide a technique whereby a pension is accumulated through a commodity purchase and other consumption, and it is thereby possible to accumulate a pension while avoiding consumption stagnation. [Solution] A funded pension processing device (1) for providing, in response to a commodity purchase by a user, a funded pension service for accumulating a portion of the charge for the commodity as a funded pension for the user has a funded pension information DB (1C) for storing information pertaining to the funded pension accumulated in accordance with purchasing of the commodity by the user. When user identification information, information pertaining to a settlement amount accompanying the commodity purchase, and information pertaining to a funded pension sum that is set for the commodity are received from a store terminal (3) as settlement information of the commodity purchase by the user, a request for payment processing of the settlement amount to the store and a request for accumulation processing of the funded pension that is set for the commodity are transmitted together with the settlement information to a financial institution terminal (4). When notification that accumulation processing of the funded pension is completed is received from the financial institution terminal (4), information pertaining to the funded pension for which accumulation processing is completed is registered in a funded pension information DB (1C).
