ABSTRACT**IMAGE DATA PROCESSING SYSTEM**

5 An image data processing system includes a PDA (2), an image data processing
unit (3) for editing image data created by the PDA, and a personal computer. The above
units include communication units (16, 35, 47) which can communicate with one
another via a communication line a. The PDA includes an image input unit (12) for
creating the image data of a subject, image data-related information creating means (20)
10 for creating information related to the image data, and an input unit (14) for determining
an output format of image data and the like. The image data processing unit (3) includes
a data storage unit (34) for storing received image data and the like, a CPU (31) for
editing image data based on an input of output format information, and a printer (5) for
outputting the edited image data. The personal computer (4) includes a CPU (41) for
15 editing received image data.
