(54) Title: SYSTEMS, METHODS AND SERVERS FOR REPAIR USING EITHER POINT-TO-POINT OR POINT-TO-MULTIPOINT TRANSMISSION

(57) Abstract: Systems and methods applicable, for instance, in data delivery. For example a service operator server and/or other computer might act to determine which of point-to-point repair mode and point-to-multipoint repair mode should be employed in the case where one or more receivers do not correctly receive dispatched data. As another example, the service operator server and/or other computer might calculate one or more estimates, request one or more values from one or more repair servers, and/or provide to one or more repair servers one or more directives regarding repair mode to be employed.
