ABSTRACT

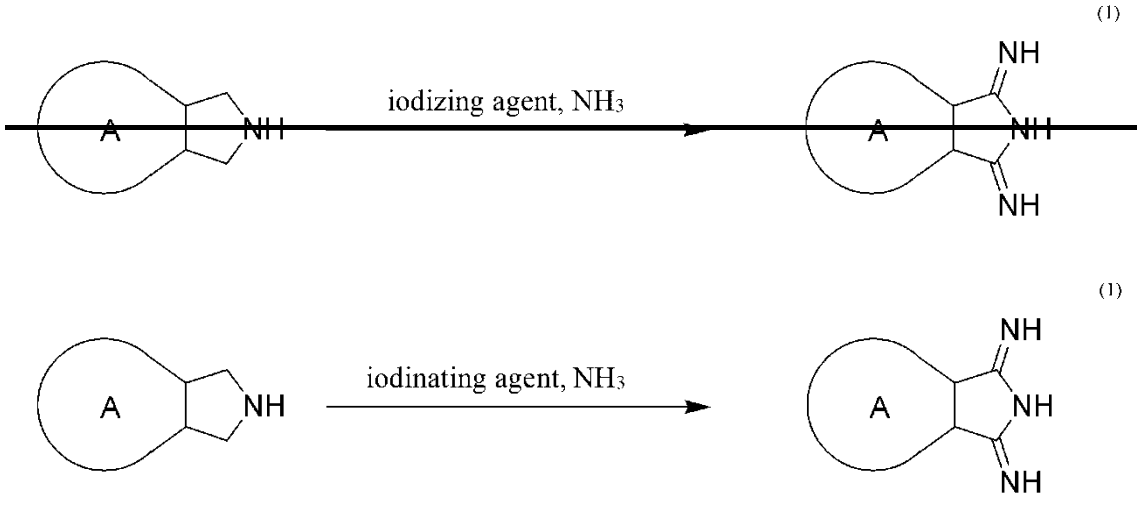

[Abstract]

[Problem]

Provided is a method for producing a diiminopyrrole compound suitable for improving producibility and eventually reducing a production cost by actively utilizing iodine, which is a resource that is mass-producible domestically in Japan.

[Solution]

A method for producing a diiminopyrrole compound includes producing a diiminopyrrole compound by mixing an aromatic 3-pyrroline compound, an iodinating agent, and ammonia based on Chemical Formula 1 below;

Here, a ring A is an aromatic group.
