

Title of Invention: CUTTING APPARATUS, AND METHOD FOR
MANUFACTURING CUT PRODUCT

ABSTRACT

5 A cutting apparatus of the present invention includes a cutting table, a cutting
mechanism, a dressing table, a storage mechanism, and a transport mechanism. The
cutting table holds an object to be cut. The cutting mechanism cuts, using a blade, the
object to be cut held by the cutting table. The dressing table holds a dress board for
dressing the blade. The storage mechanism stores a plurality of dress boards in a stacked
10 manner. The transport mechanism includes a substrate transport unit and a dress board
transport unit capable of moving together with the substrate transport unit. The substrate
transport unit suctions the object to be cut and transports the suctioned object to be cut to
the cutting table. The dress board transport unit transports the dress board between the
storage mechanism and the dressing table.
