

Abstract

Embodiments relate to methods, systems, and devices for managing trading information. The method includes receiving non-indicative price information and indicative price information from communications between a representative user and customer users. The method includes categorizing indicative and non-indicative price information. The method includes generating candidate trading records, including indicative price candidate trading records and non-indicative price candidate trading records. The method includes generating a confidence indicia for each indicative price candidate trading record and non-indicative price candidate trading record. The method includes ranking the candidate trading records, including ranking non-indicative price candidate trading records higher than indicative price candidate trading records when certain conditions are met, ranking indicative price candidate trading records higher than non-indicative price candidate trading records when certain conditions are met, ranking indicative price candidate trading records based on confidence indicia, and ranking non-indicative price candidate trading records based on confidence indicia.
