(54) Title: DRUG DELIVERY DEVICE

FIG. 1A

(57) Abstract: A drug delivery device may include a housing having an opening, a drug storage container including a delivery member having an insertion end configured to extend at least partially through the opening during a delivery state, a plunger moveable toward a distal end of the drug storage container to expel a drug from the drug storage container, a guard moveably positioned adjacent to the opening, and a drive mechanism including a releaser member, a plunger guide, and a guard extension. The device may also include a container holder configured to support the drug storage container. The container holder may have a substantially tubular body portion and a pair of arms extending axially from a proximal end of the body portion, and the arms may be configured to abut a distal end surface of the guard extension to at least partially support the guard extension in at least a pre-delivery state.
