

ABSTRACT OF THE DISCLOSURE

CANOPY ASSEMBLY

A canopy assembly has at least one canopy device, at least one guiding
5 cable, at least one connection device, and a driving device. The at least one
canopy device is expandable along an expansion direction. Each one of the at
least one canopy device has a canopy element and multiple canopy clamping
members including a first canopy clamping member. The at least one guiding
cable is disposed above the at least one canopy device and extends along the
10 expansion direction. The at least one connection device is connected
respectively with the at least one canopy device and is mounted moveably on the
at least one guiding cable. The driving device is connected with the at least one
connection device to drive the at least one canopy device to expand along the
expansion direction.
