(54) Title: SYSTEM AND METHOD OF ATTRACTING AND LODGING PCT NATIONAL PHASE APPLICATIONS

(57) Abstract: A computer implemented system and method of attracting and lodging PCT national phase patent applications. The computer system for lodging a PCT national phase application with a patent office has an interface which is adapted to receive a national phase filling instruction. The interface is in communication with a document generator which is adapted to generate a national phase entry message. The generator is in communication with a document sender which is adapted to send the national phase entry message to the patent office. When the interface receives a national phase filing instruction the document generator generates the national phase entry message and the document sender sends the message to the patent office thereby lodging the PCT national phase application.
