

PAYMENT VERIFICATION METHOD AND SYSTEM

ABSTRACT

The present specification discloses a payment verification method and system. A payment collection device generates verification information for a to-be-processed target payment transaction, and provides the verification information to a payment device. The payment device generates payment information, and provides payment information to the payment collection device. The payment information includes payment account information and obtained verification information. After obtaining the payment information, the payment collection device performs matching verification by using the verification information included in the payment information and the locally generated verification information. If the verification succeeds, the payment collection device completes a payment request by using the account information included in the payment information.
