(54) Title: DRIED REAGENTS

FIGURE 1

(57) Abstract: The present invention relates to a device comprising at least one reaction space with a single pre-dispensed dried reagent composition suitable for performing an assay method for detecting at least one analyte in a sample to be added to the reaction space, wherein the reagent composition comprises at least one set of analyte-specific proximity probes and a drying stabiliser, wherein the proximity probes in the set each comprise a binding domain for binding directly or indirectly to the analyte and a nucleic acid domain. The invention further relates to a method of performing a detection assay with use of the device, as well as a method of preparing the device.
