

**SUMMARY OF THE TECHNICAL CONTENT
OF THE INVENTION**

**SUPERABSORBENT ACRYLIC POLYMERS HAVING IMPROVED PROPERTIES
AND PROCESS FOR THE PRODUCTION THEREOF**

Representative:** Phillipe Haicour

Inventors: Shu Rong Rebre
Christian Collette
Thierry Guerin

Superabsorbent acrylic polymers for water and aqueous fluids, possessing improved properties, in particular a short gelling time, and possessing high gel strength and pronounced gel suction under pressure. These products are produced by means of a process involving double polymerization in an aqueous suspension utilizing a surfactant having a high hydrolipophilic balance during the first polymerization and a surfactant having a low hydrolipophilic balance during the second polymerization.
