

METHOD FOR PROVIDING PRODUCT HAVING SUCKER LAYER

ABSTRACT OF THE DISCLOSURE

A sheet-like or non-sheet like product (1) includes a printed sucker layer. The sucker layer (6) has a given sucker pattern including a plurality of suckers (4). Each sucker (4) has such a shape as to ensure an adsorbing function as a sucker. The product can adhere or attach to a certain member, such as a notice board, a windowpane or a table, by means of the sucker layer (6) without using an adhesive or the like. The sucker layer is made of ultraviolet-reactive curing type ink or two-liquid reactive curing type ink prepared by mixing certain synthetic resin as a main component with a reactive curing agent, a plasticizer, an additive agent, a solvent and the like.
