

Abstract

The present invention relates to a cannula (1), comprising a cannula body with a cannula tube (11) and a body part (10) attached to the proximal end of the cannula tube (11), a control clip (30) having a mounting body (31) with at least one control element (35, 36), said control clip (30) being attachable laterally on the body part to form a first configuration (I). In addition, the present invention relates to a cannula body, a contact clip (20) and a control clip (30) of a cannula (1) according to the invention.
