(54) Title: REGULATING VALVE WITH A MAINTAINED REGULATING CHARACTERISTIC AT DIFFERENT KV-VALUES WITHIN ONE AND THE SAME VALVE

(57) Abstract: The present invention relates to a device, designed to regulate the flow of a medium in a heating or cooling system, and it relates to a regulating valve (51) with a fastened mounted veil (14), which cooperates with a rotatable cone (11), which is machined and profiled, the complete valve obtaining a function, which implies, that its Kv- value can be changed within the same valve dimension, and that the flow characteristic is maintained irrespective of the changed Kv- value. The Kv- value of the valve can be changed or adjusted also subsequent to the mounting of the valve in an installation.
