

CARBONATE CONTAINING LIPID COMPOUNDS AND COMPOSITIONS FOR INTRACELLULAR DELIVERY OF THERAPEUTIC AGENTS

Related Applications

- 5 **[0001]** This application claims priority to, and the benefit of, U.S. Provisional Application No. 62/902,929, filed September 19, 2019, the entire content of which is incorporated herein by reference.

Field of Disclosure

- 10 **[0002]** The present disclosure provides novel compounds, compositions comprising such compounds, and methods involving lipid nanoparticle compositions to deliver one or more therapeutic and/or prophylactics to and/or produce polypeptides in mammalian cells or organs. In addition to a novel lipid, lipid nanoparticle compositions of the disclosure may include one or more cationic and/or ionizable amino lipids, phospholipids including
15 polyunsaturated lipids, PEG lipids, structural lipids, and/or therapeutic and/or prophylactics in specific fractions.

Background of the Disclosure

- 20 **[0003]** The effective targeted delivery of biologically active substances such as small molecule drugs, proteins, and nucleic acids represents a continuing medical challenge. In particular, the delivery of nucleic acids to cells is made difficult by the relative instability and low cell permeability of such species. Thus, there exists a need to develop methods and compositions to facilitate the delivery of therapeutic and/or prophylactics such as nucleic acids to cells.
- 25 **[0004]** Lipid-containing nanoparticle compositions, liposomes, and lipoplexes have proven effective as transport vehicles into cells and/or intracellular compartments for biologically active substances such as small molecule drugs, proteins, and nucleic acids. Such compositions generally include one or more “cationic” and/or amino (ionizable) lipids, phospholipids including polyunsaturated lipids, structural lipids (*e.g.*, sterols), and/or lipids
30 containing polyethylene glycol (PEG lipids). Cationic and/or ionizable lipids include, for example, amine-containing lipids that can be readily protonated. Though a variety of such

lipid-containing nanoparticle compositions have been demonstrated, improvements in safety, efficacy, and specificity are still lacking.

Summary of the Disclosure

[0005] The present disclosure provides novel compounds and compositions and methods involving the same.

[0006] In some aspects, the present disclosure relates to compound of Formula (A):

(A), or its N-oxide, or a salt or isomer thereof, wherein

m is selected from 5, 6, 7, 8, and 9;

R² and R³ are each independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl;

R⁴ is selected from -(CH₂)_nOH, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n₂ is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R¹⁰ is -N(R)₂, wherein each R is independently selected from the group consisting of C₁₋₆ alkyl, C₂₋₃ alkenyl, and H;

M and M' are each independently selected from -OC(O)O- and -C(O)O-; wherein at least one of M and M' is -OC(O)O-;

R^a is C₁₋₁₈ alkyl or C₂₋₁₈ alkenyl; and

Rⁿ is a C₃-C₁₃ alkyl, optionally substituted with OH.

Detailed Description

[0007] The disclosure relates to novel lipids and lipid nanoparticles (e.g., empty LNPs or loaded LNPs) including a novel lipid. The disclosure also provides methods of delivering a therapeutic and/or prophylactic to a mammalian cell, specifically delivering a therapeutic and/or prophylactic to a mammalian organ, producing a polypeptide of interest in a mammalian cell, improving levels of protein produced in a mammalian cell as compared to LNPs comprising other lipids, and treating a disease or disorder in a mammal in need thereof. For example, a method of producing a polypeptide of interest in a cell involves contacting a nanoparticle comprising an mRNA with a mammalian cell, whereby the mRNA may be

translated to produce the polypeptide of interest. A method of delivering a therapeutic and/or prophylactic to a mammalian cell or organ may involve administration of a nanoparticle composition including the therapeutic and/or prophylactic to a subject, in which the administration involves contacting the cell or organ with the composition, whereby the therapeutic and/or prophylactic is delivered to the cell or organ. Such methods of delivery can be in vitro or in vivo.

[0008] The present disclosure provides lipids including a central amine moiety and at least one biodegradable group. The lipids described herein may be advantageously used in lipid nanoparticle compositions for the delivery of therapeutic and/or prophylactics to mammalian cells or organs. For example, the lipids described herein have little or no immunogenicity. For example, the lipid compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) has a lower immunogenicity as compared to a reference lipid (*e.g.*, MC3, KC2, or DLinDMA). For example, a formulation comprising a lipid disclosed herein and a therapeutic or prophylactic agent has an increased therapeutic index as compared to a corresponding formulation which comprise a reference lipid (*e.g.*, MC3, KC2, or DLinDMA) and the same therapeutic or prophylactic agent.

[0009] In some aspects, the disclosure relates to a compound of Formula (B):

R⁴ is selected from -(CH₂)_nOH, wherein n is selected from 1, 2, 3, 4, and 5, and

R¹⁰ is -N(R)₂, wherein each R is independently selected from the group consisting of C₁₋₆ alkyl, C₂₋₃ alkenyl, and H;

R^{αα}, R^{αβ}, and R^{αγ} are each independently selected from the group consisting of H, C₁₋₁₂ alkyl, and C₂₋₁₂ alkenyl, wherein at least one of R^{αα}, R^{αβ}, and R^{αγ} is selected from the group consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl; and

R' is a C₁₋₁₂ alkyl or C₂₋₁₂ alkenyl.

[0010] In some aspects, the disclosure relates to a compound of Formula (A1), (A2), or

wherein

m is selected from 5, 6, 7, 8, and 9;

- 5 R^2 and R^3 are each independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl;

R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is -N(R)₂, wherein each R is independently selected from the group consisting of C₁₋₆ alkyl, C₂₋₃ alkenyl, and H;

10

$R^{a\alpha}$, $R^{a\beta}$, and $R^{a\gamma}$ are each independently selected from the group consisting of H, C₁₋₁₂ alkyl, and C₂₋₁₂ alkenyl, wherein at least one of $R^{a\alpha}$, $R^{a\beta}$, and $R^{a\gamma}$ is selected from the group consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl;

- 15 R'' is a C₃-C₁₃ alkyl, optionally substituted with OH; and
 R' is a C₁₋₁₂ alkyl or C₂₋₁₂ alkenyl.

[0011] In some aspects, the disclosure relates to a compound of Formula (I):

or a salt or isomer thereof, wherein:

R^1 is selected from the group consisting of C_{5-30} alkyl, C_{5-20} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R''M'R'$;

R^2 and R^3 are independently selected from the group consisting of H, C_{1-14} alkyl, C_{2-14} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^*OR^{**}$, or R^2 and R^3 , together with the atom to which they are attached, form a heterocycle or carbocycle;

R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is $-N(R)_2$, wherein each R is independently selected from the group consisting of C_{1-6} alkyl, C_{2-3} alkenyl, and H;

each R^5 is independently selected from the group consisting of OH, C_{1-3} alkyl, C_{2-3} alkenyl, and H;

each R^6 is independently selected from the group consisting of OH, C_{1-3} alkyl, C_{2-3} alkenyl, and H;

M is selected from $-OC(O)O-$, $-OC(O)-NR^M-C(O)O-$, $-O-M''-O-$, $-OC(O)N(R^M)-$, $-N(R^M)C(O)O-$, $-NR^MC(O)NR^M-$, $-O-N=C(R^M)-$, SO-, -OS-, $-S(R^M)_2O-$, $-O-S(R^M)_2-$, $-S(O)O-$, $-OS(O)-$, in which M'' is a bond, $-(CH_2)_zC(O)-$, C_{1-13} alkyl, C_{2-13} alkenyl, $-B(R^{**})-$, $-Si(R^{**})_2-$, $-S(R^{**})_2-$, or $-S(O)-$, wherein z is 1, 2, 3, or 4;

M' is selected from $-OC(O)O-$, $-C(O)O-$, $-OC(O)-$, $-OC(O)-M''-C(O)O-$, $-OC(O)-NR^M-C(O)O-$, $-O-M''-O-$, $-C(O)N(R^M)-$, $-N(R^M)C(O)-$, $-OC(O)N(R^M)-$, $-N(R^M)C(O)O-$, $-NR^MC(O)NR^M-$, $-O-N=C(R^M)-$, $-C(O)-$, $-C(S)-$, $-C(S)S-$, $-SC(S)-$, $-CH(OH)-$, $-P(O)(OR^M)O-$, $-S(O)_2-$, $-S-S-$, $-SO-$, $-OS-$, $S(R^M)_2O-$, $-O-S(R^M)_2-$, $-S(O)O-$, $-OS(O)-$, an aryl group, and a heteroaryl group, in which M'' is a bond, $-(CH_2)_zC(O)-$, C_{1-13} alkyl, C_{2-13} alkenyl, $-B(R^{**})-$, $-Si(R^{**})_2-$, $-S(R^{**})_2-$, or $-S(O)-$, wherein z is 1, 2, 3, or 4;

R^7 is selected from the group consisting of C_{1-3} alkyl, C_{2-3} alkenyl, and H;

each R is independently selected from the group consisting of C_{1-6} alkyl, C_{1-3} alkyl-aryl, C_{2-3} alkenyl, and H;

each R' is independently selected from the group consisting of C_{1-18} alkyl, C_{2-18} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, $(CH_2)_qOR^*$, and H,

and each q is independently selected from 1, 2, and 3;

each R^M is independently selected from the group consisting of H, C₁₋₆ alkyl and C₂₋₆ alkenyl;

each R'' is independently selected from the group consisting of C₃₋₁₅ alkyl and C₃₋₁₅ alkenyl;

5 each R''' is selected from the group consisting of C₁₋₁₅ alkyl and C₂₋₁₅ alkenyl;

each R^* is independently selected from the group consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl;

each R^{**} is independently selected from the group consisting of H, OH, C₁₋₁₂ alkyl, C₂₋₁₂ alkenyl, $(CH_2)_qOR^*$, and $(CH_2)_qOH$;

10 each Y is independently a C₃₋₆ carbocycle; and

m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

[0012] In some aspects, the disclosure relates to a compound of Formula (I'):

or a salt or isomer thereof, wherein:

15 R^1 is selected from the group consisting of C₅₋₃₀ alkyl, C₅₋₂₀ alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R''M'R'$;

R^2 and R^3 are independently selected from the group consisting of H, C₁₋₁₄ alkyl, C₂₋₁₄ alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^*OR^{**}$, or R^2 and R^3 , together with the atom to which they are attached, form a heterocycle or carbocycle;

20 R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is $-N(R)_2$, wherein each R is independently selected from the group consisting of C₁₋₆ alkyl, C₂₋₃ alkenyl, and H;

each R^5 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

25 each R^6 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

M is selected from $-\text{OC}(\text{O})\text{O}-$, $-\text{C}(\text{O})\text{O}-$, $-\text{OC}(\text{O})-$, $-\text{OC}(\text{O})-\text{M}''-\text{C}(\text{O})\text{O}-$, $-\text{OC}(\text{O})-\text{NR}^{\text{M}}-\text{C}(\text{O})\text{O}-$, $-\text{O}-\text{M}''-\text{O}-$, $-\text{C}(\text{O})\text{N}(\text{R}^{\text{M}})-$, $-\text{N}(\text{R}^{\text{M}})\text{C}(\text{O})-$, $-\text{OC}(\text{O})\text{N}(\text{R}^{\text{M}})-$, $-\text{N}(\text{R}^{\text{M}})\text{C}(\text{O})\text{O}-$, $-\text{NR}^{\text{M}}\text{C}(\text{O})\text{NR}^{\text{M}}-$, $-\text{O}-\text{N}=\text{C}(\text{R}^{\text{M}})-$, $-\text{C}(\text{O})-$, $-\text{C}(\text{S})-$, $-\text{C}(\text{S})\text{S}-$, $-\text{SC}(\text{S})-$, $-\text{CH}(\text{OH})-$, $-\text{P}(\text{O})(\text{OR}^{\text{M}})\text{O}-$, $-\text{S}(\text{O})_2-$, $-\text{S}-\text{S}-$, $-\text{SO}-$, $-\text{OS}-$, $\text{S}(\text{R}^{\text{M}})_2\text{O}-$, $-\text{O}-\text{S}(\text{R}^{\text{M}})_2-$, $-\text{S}(\text{O})\text{O}-$, $-\text{OS}(\text{O})-$, an aryl group, and a

5 heteroaryl group, in which M'' is a bond, $-(\text{CH}_2)_z\text{C}(\text{O})-$, C_{1-13} alkyl, C_{2-13} alkenyl, $-\text{B}(\text{R}^{**})-$, $-\text{Si}(\text{R}^{**})_2-$, $-\text{S}(\text{R}^{**})_2-$, or $-\text{S}(\text{O})-$, wherein z is 1, 2, 3, or 4;

M' is selected from $-\text{OC}(\text{O})\text{O}-$, $-\text{OC}(\text{O})-\text{NR}^{\text{M}}-\text{C}(\text{O})\text{O}-$, $-\text{O}-\text{M}''-\text{O}-$, $-\text{OC}(\text{O})\text{N}(\text{R}^{\text{M}})-$, $-\text{N}(\text{R}^{\text{M}})\text{C}(\text{O})\text{O}-$, $-\text{NR}^{\text{M}}\text{C}(\text{O})\text{NR}^{\text{M}}-$, $-\text{O}-\text{N}=\text{C}(\text{R}^{\text{M}})-$, $\text{SO}-$, $-\text{OS}-$, $-\text{S}(\text{R}^{\text{M}})_2\text{O}-$, $-\text{O}-\text{S}(\text{R}^{\text{M}})_2-$, $-\text{S}(\text{O})\text{O}-$, $-\text{OS}(\text{O})-$, in which M'' is a bond, $-(\text{CH}_2)_z\text{C}(\text{O})-$, C_{1-13} alkyl, C_{2-13} alkenyl,

10 $-\text{B}(\text{R}^{**})-$, $-\text{Si}(\text{R}^{**})_2-$, $-\text{S}(\text{R}^{**})_2-$, or $-\text{S}(\text{O})-$, wherein z is 1, 2, 3, or 4;

R^7 is selected from the group consisting of C_{1-3} alkyl, C_{2-3} alkenyl, and H;

each R' is independently selected from the group consisting of C_{1-18} alkyl, C_{2-18} alkenyl, $-\text{R}^*\text{YR}^{**}$, $-\text{YR}^{**}$, $(\text{CH}_2)_q\text{OR}^*$, and H,

and each q is independently selected from 1, 2, and 3;

15 each R^{M} is independently selected from the group consisting of H, C_{1-6} alkyl and C_{2-6} alkenyl;

each R'' is independently selected from the group consisting of C_{3-15} alkyl and C_{3-15} alkenyl;

each R''' is selected from the group consisting of C_{1-15} alkyl and C_{2-15} alkenyl;

20 each R^* is independently selected from the group consisting of C_{1-12} alkyl and C_{2-12} alkenyl;

each R^{**} is independently selected from the group consisting of H, OH, C_{1-12} alkyl, C_{2-12} alkenyl, $(\text{CH}_2)_q\text{OR}^*$, and $(\text{CH}_2)_q\text{OH}$;

each Y is independently a C_{3-6} carbocycle;

25 m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

[0013] In some aspects, the disclosure relates to a compound of Formula (I-X):

(I-X) or its N-oxide, or a salt or isomer thereof, wherein:

R^1 is selected from the group consisting of C_{5-30} alkyl, C_{5-20} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R''M'R'$;

R^2 and R^3 are independently selected from the group consisting of H, C_{1-14} alkyl, C_{2-14} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^*OR^{**}$, or R^2 and R^3 , together with the atom to which they are attached, form a heterocycle or carbocycle;

R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is $-N(R)_2$, wherein each R is independently selected from the group consisting of C_{1-6} alkyl, C_{2-3} alkenyl, and H;

each R^5 is independently selected from the group consisting of OH, C_{1-3} alkyl, C_{2-3} alkenyl, and H;

each R^6 is independently selected from the group consisting of OH, C_{1-3} alkyl, C_{2-3} alkenyl, and H;

M' is selected from $-OC(O)O-$, $-C(O)O-$, $-OC(O)-$, $-OC(O)-M''-C(O)O-$, $-OC(O)-NR^M-C(O)O-$, $-O-M''-O-$, $-C(O)N(R^M)-$, $-N(R^M)C(O)-$, $-OC(O)N(R^M)-$, $-N(R^M)C(O)O-$, $-NR^MC(O)NR^M-$, $-O-N=C(R^M)-$, $-C(O)-$, $-C(S)-$, $-C(S)S-$, $-SC(S)-$, $-CH(OH)-$, $-P(O)(OR^M)O-$, $-S(O)_2-$, $-S-S-$, $-SO-$, $-OS-$, $S(R^M)_2O-$, $-O-S(R^M)_2-$, $-S(O)O-$, $-OS(O)-$, an aryl group, and a heteroaryl group, in which M'' is a bond, $-(CH_2)_zC(O)-$, C_{1-13} alkyl, C_{2-13} alkenyl, $-B(R^{**})-$, $-Si(R^{**})_2-$, $-S(R^{**})_2-$, or $-S(O)-$, wherein z is 1, 2, 3, or 4;

each R' is independently selected from the group consisting of C_{1-18} alkyl, C_{2-18} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, $(CH_2)_qOR^*$, and H,

and each q is independently selected from 1, 2, and 3;

each R^M is independently selected from the group consisting of H, C_{1-6} alkyl and C_{2-6} alkenyl;

each R'' is independently selected from the group consisting of C_{3-15} alkyl and C_{3-15} alkenyl;

each R^{**} is selected from the group consisting of C_{1-15} alkyl and C_{2-15} alkenyl;

each R^* is independently selected from the group consisting of C_{1-12} alkyl and C_{2-12} alkenyl;

each R^{**} is independently selected from the group consisting of H, OH, C_{1-12} alkyl,

C₂₋₁₂ alkenyl, (CH₂)_qOR*, and (CH₂)_qOH;

each Y is independently a C₃₋₆ carbocycle; and

m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

[0014] In certain embodiments, a subset of compounds of Formula (I) or (I') includes

5 those of Formula (IA):

or its N-oxide, or a salt or isomer thereof, wherein *l* is selected from 1, 2, 3, 4, and 5; *m* is selected from 5, 6, 7, 8, and 9; and R² and R³ are independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl.

10 **[0015]** In certain embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (II):

or its N-oxide, or a salt or isomer thereof, wherein *l* is selected from 1, 2, 3, 4, and 5; and R² and R³ are independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl.

15 **[0016]** In other embodiments, a subset of compounds of Formula (II) includes those of Formula (IIa):

or its N-oxide, or a salt or isomer thereof, wherein

20 *l* is selected from 1, 2, 3, 4, and 5;

M₁ is M'; and

R^2 and R^3 are independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl.

[0017] In other embodiments, a subset of compounds of Formula (II) includes those of Formula (IIb):

or its N-oxide, or a salt or isomer thereof, wherein

l is selected from 1, 2, 3, 4, and 5;

M_1 is M^+ ; and

R^2 and R^3 are independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl.

[0018] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (Ia):

(Ia), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0019] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (Ib):

(Ib), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0020] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (Ic):

(Ic), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0021] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (Id):

(Id), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0022] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (Ie):

(Ie), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0023] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (If):

(If), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0024] In other embodiments, a subset of compounds of Formula (I) or (I') includes those of Formula (Ig):

(Ig), or its N-oxide, or a salt or isomer thereof, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

[0025] In some aspects, the disclosure relates to a compound of Formula (I-Y):

(I-Y), or its N-oxide, or a salt or isomer thereof, wherein:

R¹ is selected from the group consisting of C₅₋₃₀ alkyl, C₅₋₂₀ alkenyl, -R*YR*'', -YR*'', and -R''M'R';

R² and R³ are independently selected from the group consisting of H, C₁₋₁₄ alkyl, C₂₋₁₄ alkenyl, -R*YR*'', -YR*'', and -R*OR*'', or R² and R³, together with the atom to which they are attached, form a heterocycle or carbocycle;

R⁴ is selected from -(CH₂)_nOH, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n₂ is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R¹⁰ is -N(R)₂, wherein each R is independently selected from the group consisting of C₁₋₆ alkyl, C₂₋₃ alkenyl, and H;

each R⁵ is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

each R⁶ is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

M' is selected from -OC(O)O-, -C(O)O-, -OC(O)-, -OC(O)-M''-C(O)O-, -OC(O)-NR^M-C(O)O-, -O-M''-O-, -C(O)N(R^M)-, -N(R^M)C(O)-, -OC(O)N(R^M)-, -N(R^M)C(O)O-, -NR^MC(O)NR^M-, -O-N=C(R^M)-, -C(O)-, -C(S)-, -C(S)S-, -SC(S)-, -CH(OH)-, -P(O)(OR^M)O-, -S(O)₂-, -S-S-, -SO-, -OS-, S(R^M)₂O-, -O-S(R^M)₂-, -S(O)O-, -OS(O)-, an aryl group, and a

heteroaryl group, in which M'' is a bond, $-(CH_2)_zC(O)-$, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, $-B(R^{**})-$, $-Si(R^{**})_2-$, $-S(R^{**})_2-$, or $-S(O)-$, wherein z is 1, 2, 3, or 4;

each R' is independently selected from the group consisting of C₁₋₁₈ alkyl, C₂₋₁₈ alkenyl, $-R^*YR^{**}$, $-YR^{**}$, $(CH_2)_qOR^*$, and H,

5 and each q is independently selected from 1, 2, and 3;

each R^M is independently selected from the group consisting of H, C₁₋₆ alkyl and C₂₋₆ alkenyl;

each R'' is independently selected from the group consisting of C₃₋₁₅ alkyl and C₃₋₁₅ alkenyl;

10 each R''' is selected from the group consisting of C₁₋₁₅ alkyl and C₂₋₁₅ alkenyl;

each R* is independently selected from the group consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl;

each R** is independently selected from the group consisting of H, OH, C₁₋₁₂ alkyl, C₂₋₁₂ alkenyl, $(CH_2)_qOR^*$, and $(CH_2)_qOH$;

15 each Y is independently a C₃₋₆ carbocycle; and

m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

[0026] In some embodiments, a subset of compounds of Formula (I-Y) includes those of Formula (I-Ya):

(I-Ya), or its N-oxide, or a salt or isomer thereof, wherein each R''

20 independently is selected from H, OH, and C₁₋₆ alkyl, l is selected from 2, 3, 4, 5, and 6, and m is selected from 5, 6, 7, 8, and 9.

[0027] The compounds of any one of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) include one or more of the following features when applicable.

25 [0028] In some embodiments, R^a is : ; wherein denotes a point of attachment;

$R^{a\alpha}$, $R^{a\beta}$, and $R^{a\gamma}$ are each independently selected from the group consisting of H, C_{1-12} alkyl, and C_{2-12} alkenyl, wherein at least one of $R^{a\alpha}$, $R^{a\beta}$, and $R^{a\gamma}$ is selected from the group consisting of C_{1-12} alkyl and C_{2-12} alkenyl; and

R' is a C_{1-12} alkyl or C_{2-12} alkenyl.

- 5 [0029] In some embodiments, M and M' are each $-\text{OC}(\text{O})\text{O}-$. In some embodiments, M is

$-\text{C}(\text{O})\text{O}-$ and M' is $-\text{OC}(\text{O})\text{O}-$. In some embodiments, M is $-\text{OC}(\text{O})\text{O}-$ and M' is $-\text{C}(\text{O})\text{O}-$.

[0030] In some embodiments, l is 1, 3, or 5. In some embodiments, l is 1, 3, or 4. In some embodiments, l is 5.

[0032] In some embodiments, R^4 is $-(\text{CH}_2)_2\text{OH}$.

[0033] In some embodiments, R^2 and R^3 are independently C_{3-14} alkyl or C_{3-14} alkenyl.

- [0034] In some embodiments, R^a is selected from C_4 alkyl, C_4 alkenyl, C_5 alkyl, C_5 alkenyl, C_6 alkyl, C_6 alkenyl, C_7 alkyl, C_7 alkenyl, C_9 alkyl, C_9 alkenyl, C_{11} alkyl, C_{11} alkenyl, C_{17} alkyl, C_{17} alkenyl, C_{18} alkyl, and C_{18} alkenyl, each of which is either linear or branched.

- [0035] In some embodiments, R' is C_4 alkyl or C_4 alkenyl. In some embodiments, R' is C_5 alkyl or C_5 alkenyl. In some embodiments, R' is C_6 alkyl or C_6 alkenyl. In some embodiments, R' is C_7 alkyl or C_7 alkenyl. In some embodiments, R' is C_8 alkyl or C_8 alkenyl. In some embodiments, R' is C_9 alkyl or C_9 alkenyl. In some embodiments, R' is C_{10} alkyl or C_{10} alkenyl. In some embodiments, R' is C_{11} alkyl or C_{11} alkenyl.

[0036] In certain embodiments, R^a is branched C_{1-18} alkyl. For example, R^a is

- 25 [0037] In some embodiments, R'' is selected from the group consisting of C_{3-15} alkyl and C_{3-15} alkenyl. In some embodiments, R'' is C_3 alkyl, C_4 alkyl, C_5 alkyl, C_6 alkyl, C_7 alkyl, or C_8 alkyl. In some embodiments, R'' is C_9 alkyl, C_{10} alkyl, C_{11} alkyl, C_{12} alkyl, C_{13} alkyl, C_{14} alkyl, or C_{15} alkyl.

[0038] In some embodiments, R^2 and R^3 are independently C_{5-14} alkyl or C_{5-14} alkenyl.

[0039] In some embodiments, R^2 and R^3 are the same. In some embodiments, R^2 and R^3 are C_8 alkyl. In certain embodiments, R^2 and R^3 are C_2 alkyl. In other embodiments, R^2 and R^3 are C_3 alkyl. In some embodiments, R^2 and R^3 are C_4 alkyl. In certain embodiments, R^2 and R^3 are C_5 alkyl. In other embodiments, R^2 and R^3 are C_6 alkyl. In some embodiments, R^2 and R^3 are C_7 alkyl.

[0040] In other embodiments, R^2 and R^3 are different. In certain embodiments, R^2 is C_8 alkyl. In some embodiments, R^3 is C_{1-7} (e.g., C_1 , C_2 , C_3 , C_4 , C_5 , C_6 , or C_7 alkyl) or C_9 alkyl.

[0041] In some embodiments, R^3 is C_1 alkyl. In some embodiments, R^3 is C_2 alkyl. In some embodiments, R^3 is C_3 alkyl. In some embodiments, R^3 is C_4 alkyl. In some embodiments, R^3 is C_5 alkyl. In some embodiments, R^3 is C_6 alkyl. In some embodiments, R^3 is C_7 alkyl. In some embodiments, R^3 is C_9 alkyl.

[0042] In some embodiments, m is 5, 6, 7, 8, or 9. In some embodiments, m is 5, 7, or 9. For example, in some embodiments, m is 5. For example, in some embodiments, m is 7. For example, in some embodiments, m is 9.

[0043] In some embodiments, n is 2, 3, or 4. In some embodiments, n is 2. In some embodiments, n is 4. In some embodiments, n is not 3.

[0044] In some embodiments, n_2 is 2, 3, or 4. In some embodiments, n_2 is 2. In some embodiments, n_2 is 4. In some embodiments, n_2 is not 3.

[0045] In some embodiments, the compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) is selected from Table 1.

[0046] The central amine moiety of a lipid according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) may be protonated at a physiological pH. Thus, a lipid may have a positive or partial positive charge at physiological pH. Such lipids may be referred to as cationic or ionizable (amino)lipids. Lipids may also be zwitterionic, i.e., neutral molecules having both a positive and a negative charge.

Definitions

[0047] As used herein, the term “alkyl” or “alkyl group” means a linear or branched, saturated hydrocarbon including one or more carbon atoms (*e.g.*, one, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, twenty, or more carbon atoms), which is optionally substituted. The notation “C₁₋₁₄ alkyl” means an optionally substituted linear or branched, saturated

hydrocarbon including 1-14 carbon atoms. Unless otherwise specified, an alkyl group described herein refers to both unsubstituted and substituted alkyl groups.

[0048] As used herein, the term “alkenyl” or “alkenyl group” means a linear or branched hydrocarbon including two or more carbon atoms (*e.g.*, two, three, four, five, six, seven, 5 eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, twenty, or more carbon atoms) and at least one double bond, which is optionally substituted. The notation “C₂₋₁₄ alkenyl” means an optionally substituted linear or branched hydrocarbon including 2-14 carbon atoms and at least one carbon-carbon double bond. An alkenyl group may include one, two, three, four, or more carbon-carbon double bonds. For 10 example, C₁₈ alkenyl may include one or more double bonds. A C₁₈ alkenyl group including two double bonds may be a linoleyl group. Unless otherwise specified, an alkenyl group described herein refers to both unsubstituted and substituted alkenyl groups.

[0049] As used herein, the term “alkynyl” or “alkynyl group” means a linear or branched hydrocarbon including two or more carbon atoms (*e.g.*, two, three, four, five, six, seven, 15 eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, twenty, or more carbon atoms) and at least one carbon-carbon triple bond, which is optionally substituted. The notation “C₂₋₁₄ alkynyl” means an optionally substituted linear or branched hydrocarbon including 2-14 carbon atoms and at least one carbon-carbon triple bond. An alkynyl group may include one, two, three, four, or more carbon-carbon triple 20 bonds. For example, C₁₈ alkynyl may include one or more carbon-carbon triple bonds. Unless otherwise specified, an alkynyl group described herein refers to both unsubstituted and substituted alkynyl groups.

[0050] As used herein, the term “carbocycle” or “carbocyclic group” means an optionally substituted mono- or multi-cyclic system including one or more rings of carbon atoms. Rings 25 may be three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, or twenty membered rings. The notation “C₃₋₆ carbocycle” means a carbocycle including a single ring having 3-6 carbon atoms. Carbocycles may include one or more carbon-carbon double or triple bonds and may be non-aromatic or aromatic (*e.g.*, cycloalkyl or aryl groups). Examples of carbocycles include 30 cyclopropyl, cyclopentyl, cyclohexyl, phenyl, naphthyl, and 1,2-dihydronaphthyl groups. The term “cycloalkyl” as used herein means a non-aromatic carbocycle and may or may not include any double or triple bond. Unless otherwise specified, carbocycles described herein

refers to both unsubstituted and substituted carbocycle groups, i.e., optionally substituted carbocycles. In some embodiments, the carbocycle is a C₃₋₈ cycloalkyl. In some embodiments, the carbocycle is a C₃₋₆ cycloalkyl. In some embodiments, the carbocycle is a C₆₋₁₀ aryl.

5 **[0051]** “Aryl” includes groups with aromaticity, including “conjugated,” or multicyclic systems with at least one aromatic ring and do not contain any heteroatom in the ring structure. Examples include phenyl, benzyl, 1,2,3,4-tetrahydronaphthalenyl, etc. In some embodiments, an “aryl” is a C₆₋₁₀ carbocycle with aromaticity (e.g. an “aryl” is a C₆₋₁₀ aryl).

10 **[0052]** As used herein, the term “heterocycle” or “heterocyclic group” means an optionally substituted mono- or multi-cyclic system including one or more rings, where at least one ring includes at least one heteroatom. Heteroatoms may be, for example, nitrogen, oxygen, or sulfur atoms. Rings may be three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, or fourteen membered rings. Heterocycles may include one or more double or triple bonds and may be non-aromatic or aromatic (e.g., heterocycloalkyl or heteroaryl groups). Examples of heterocycles include imidazolyl, imidazolidinyl, oxazolyl, oxazolidinyl, thiazolyl, thiazolidinyl, pyrazolidinyl, pyrazolyl, isoxazolidinyl, isoxazolyl, isothiazolidinyl, isothiazolyl, morpholinyl, pyrrolyl, pyrrolidinyl, furyl, tetrahydrofuryl, thiophenyl, pyridinyl, piperidinyl, quinolyl, and isoquinolyl groups. The term “heterocycloalkyl” as used herein means a non-aromatic heterocycle and may or may not include any double or triple bond. Unless otherwise specified, heterocycles described herein refers to both unsubstituted and substituted heterocycle groups, i.e., optionally substituted heterocycles. In some embodiments, the heterocycle is a 4 to 12-membered heterocycloalkyl. In some embodiments, the heterocycle is a 5- or 6-membered heteroaryl.

20 **[0053]** “Heteroaryl” groups are aryl groups, as defined above, except having from one to four heteroatoms in the ring structure, and may also be referred to as “aryl heterocycles” or “heteroaromatics.” As used herein, the term “heteroaryl” is intended to include a stable 5-, 6-, or 7-membered monocyclic or 7-, 8-, 9-, 10-, 11- or 12-membered bicyclic aromatic heterocyclic ring which consists of carbon atoms and one or more heteroatoms, e.g., 1 or 1-2 or 1-3 or 1-4 or 1-5 or 1-6 heteroatoms, or e.g., 1, 2, 3, 4, 5, or 6 heteroatoms, independently selected from the group consisting of nitrogen, oxygen sulfur, and boron. The nitrogen atom may be substituted or unsubstituted (i.e., N or NR wherein R is H or other substituents, as defined). The nitrogen and sulfur heteroatoms may optionally be oxidized (i.e., N→O and

$S(O)_p$, where $p = 1$ or 2). It is to be noted that total number of S and O atoms in the aromatic heterocycle is not more than 1.

- [0054] Examples of heteroaryl groups include pyrrole, furan, thiophene, thiazole, isothiazole, imidazole, triazole, tetrazole, pyrazole, oxazole, isoxazole, pyridine, pyrazine, pyridazine, pyrimidine, and the like.
- [0055] Furthermore, the terms “aryl” and “heteroaryl” include multicyclic aryl and heteroaryl groups, *e.g.*, tricyclic, bicyclic, *e.g.*, naphthalene, benzoxazole, benzodioxazole, benzothiazole, benzoimidazole, benzothiophene, quinoline, isoquinoline, naphthrydine, indole, benzofuran, purine, benzofuran, deazapurine, indolizine.
- [0056] As used herein, a “biodegradable group” is a group that may facilitate faster metabolism of a lipid in a mammalian entity. A biodegradable group may be selected from the group consisting of, but is not limited to, $-C(O)O-$, $-OC(O)-$, $-C(O)N(R')$, $-N(R')C(O)-$, $-C(O)-$, $-C(S)-$, $-C(S)S-$, $-SC(S)-$, $-CH(OH)-$, $-P(O)(OR')O-$, $-S(O)_2-$, an aryl group, and a heteroaryl group. As used herein, an “aryl group” is an optionally substituted carbocyclic group including one or more aromatic rings. Examples of aryl groups include phenyl and naphthyl groups. As used herein, a “heteroaryl group” is an optionally substituted heterocyclic group including one or more aromatic rings. Examples of heteroaryl groups include pyrrolyl, furyl, thiophenyl, imidazolyl, oxazolyl, and thiazolyl. Both aryl and heteroaryl groups may be optionally substituted. For example, M and M' can be selected from the non-limiting group consisting of optionally substituted phenyl, oxazole, and thiazole. In the formulas herein, M and M' can be independently selected from the list of biodegradable groups above. Unless otherwise specified, aryl or heteroaryl groups described herein refers to both unsubstituted and substituted groups, *i.e.*, optionally substituted aryl or heteroaryl groups.
- [0057] Alkyl, alkenyl, and cyclyl (*e.g.*, carbocyclyl and heterocyclyl) groups may be optionally substituted unless otherwise specified. Optional substituents may be selected from the group consisting of, but are not limited to, a halogen atom (*e.g.*, a chloride, bromide, fluoride, or iodide group), a carboxylic acid (*e.g.*, $-C(O)OH$), an alcohol (*e.g.*, a hydroxyl, $-OH$), an ester (*e.g.*, $-C(O)OR$ or $-OC(O)R$), an aldehyde (*e.g.*, $-C(O)H$), a carbonyl (*e.g.*, $-C(O)R$, alternatively represented by $C=O$), an acyl halide (*e.g.*, $-C(O)X$, in which X is a halide selected from bromide, fluoride, chloride, and iodide), a carbonate (*e.g.*, $-OC(O)OR$), an alkoxy (*e.g.*,

- OR), an acetal (*e.g.*, $-\text{C}(\text{OR})_2\text{R}^{\text{'''}}$, in which each OR are alkoxy groups that can be the same or different and $\text{R}^{\text{'''}}$ is an alkyl or alkenyl group), a phosphate (*e.g.*, $\text{P}(\text{O})_4^{3-}$), a thiol (*e.g.*, $-\text{SH}$), a sulfoxide (*e.g.*, $-\text{S}(\text{O})\text{R}$), a sulfinic acid (*e.g.*, $-\text{S}(\text{O})\text{OH}$), a sulfonic acid (*e.g.*, $-\text{S}(\text{O})_2\text{OH}$), a thial (*e.g.*, $-\text{C}(\text{S})\text{H}$), a sulfate (*e.g.*, $\text{S}(\text{O})_4^{2-}$), a sulfonyl (*e.g.*, $-\text{S}(\text{O})_2-$), an amide (*e.g.*, $-\text{C}(\text{O})\text{NR}_2$, or
- 5 $-\text{N}(\text{R})\text{C}(\text{O})\text{R}$), an azido (*e.g.*, $-\text{N}_3$), a nitro (*e.g.*, $-\text{NO}_2$), a cyano (*e.g.*, $-\text{CN}$), an isocyano (*e.g.*, $-\text{NC}$), an acyloxy (*e.g.*, $-\text{OC}(\text{O})\text{R}$), an amino (*e.g.*, $-\text{NR}_2$, $-\text{NRH}$, or $-\text{NH}_2$), a carbamoyl (*e.g.*, $-\text{OC}(\text{O})\text{NR}_2$, $-\text{OC}(\text{O})\text{NRH}$, or $-\text{OC}(\text{O})\text{NH}_2$), a sulfonamide (*e.g.*, $-\text{S}(\text{O})_2\text{NR}_2$, $-\text{S}(\text{O})_2\text{NRH}$, $-\text{S}(\text{O})_2\text{NH}_2$, $-\text{N}(\text{R})\text{S}(\text{O})_2\text{R}$, $-\text{N}(\text{H})\text{S}(\text{O})_2\text{R}$, $-\text{N}(\text{R})\text{S}(\text{O})_2\text{H}$, or $-\text{N}(\text{H})\text{S}(\text{O})_2\text{H}$), an alkyl group, an
- 10 alkenyl group, and a cyclyl (*e.g.*, carbocyclyl or heterocyclyl) group. In any of the preceding, R is an alkyl or alkenyl group, as defined herein. In some embodiments, the substituent groups themselves may be further substituted with, for example, one, two, three, four, five, or six substituents as defined herein. For example, a C_{1-6} alkyl group may be further substituted with one, two, three, four, five, or six substituents as described herein.
- 15 **[0058]** Compounds of the disclosure that contain nitrogens can be converted to N-oxides by treatment with an oxidizing agent (*e.g.*, 3-chloroperoxybenzoic acid (*m*CPBA) and/or hydrogen peroxides) to afford other compounds of the disclosure. Thus, all shown and claimed nitrogen-containing compounds are considered, when allowed by valency and structure, to include both the compound as shown and its N-oxide derivative (which can be
- 20 designated as $\text{N}\rightarrow\text{O}$ or N^+-O^-). Furthermore, in other instances, the nitrogens in the compounds of the disclosure can be converted to N-hydroxy or N-alkoxy compounds. For example, N-hydroxy compounds can be prepared by oxidation of the parent amine by an oxidizing agent such as *m*-CPBA. All shown and claimed nitrogen-containing compounds are also considered, when allowed by valency and structure, to cover both the compound as
- 25 shown and its N-hydroxy (*i.e.*, N-OH) and N-alkoxy (*i.e.*, N-OR, wherein R is substituted or unsubstituted C_{1-6} alkyl, C_{1-6} alkenyl, C_{1-6} alkynyl, 3-14-membered carbocycle or 3-14-membered heterocycle) derivatives.
- [0059]** About, Approximately: As used herein, the terms “approximately” and “about,” as applied to one or more values of interest, refer to a value that is similar to a stated reference
- 30 value. In certain embodiments, the term “approximately” or “about” refers to a range of values that fall within 25%, 20%, 19%, 18%, 17%, 16%, 15%, 14%, 13%, 12%, 11%, 10%, 9%, 8%, 7%, 6%, 5%, 4%, 3%, 2%, 1%, or less in either direction (greater than or less than)

of the stated reference value unless otherwise stated or otherwise evident from the context (except where such number would exceed 100% of a possible value). For example, when used in the context of an amount of a given compound in a lipid component of a nanoparticle composition, “about” may mean +/- 10% of the recited value. For instance, a nanoparticle
5 composition including a lipid component having about 40% of a given compound may include 30-50% of the compound.

[0060] As used herein, the term “compound,” is meant to include all isomers and isotopes of the structure depicted. “Isotopes” refers to atoms having the same atomic number but different mass numbers resulting from a different number of neutrons in the nuclei. For
10 example, isotopes of hydrogen include tritium and deuterium. Further, a compound, salt, or complex of the present disclosure can be prepared in combination with solvent or water molecules to form solvates and hydrates by routine methods.

[0061] As used herein, the term “contacting” means establishing a physical connection between two or more entities. For example, contacting a mammalian cell with a nanoparticle
15 composition means that the mammalian cell and a nanoparticle are made to share a physical connection. Methods of contacting cells with external entities both in vivo and ex vivo are well known in the biological arts. For example, contacting a nanoparticle composition and a mammalian cell disposed within a mammal may be performed by varied routes of administration (*e.g.*, intravenous, intramuscular, intradermal, and subcutaneous) and may
20 involve varied amounts of lipid nanoparticles (*e.g.*, empty LNPs or loaded LNPs). Moreover, more than one mammalian cell may be contacted by a nanoparticle composition.

[0062] As used herein, the term “delivering” means providing an entity to a destination. For example, delivering a therapeutic and/or prophylactic to a subject may involve administering a nanoparticle composition including the therapeutic and/or prophylactic to the
25 subject (*e.g.*, by an intravenous, intramuscular, intradermal, or subcutaneous route). Administration of a nanoparticle composition to a mammal or mammalian cell may involve contacting one or more cells with the nanoparticle composition.

[0063] As used herein, the term “enhanced delivery” means delivery of more (*e.g.*, at least 1.5 fold more, at least 2-fold more, at least 3-fold more, at least 4-fold more, at least 5-
30 fold more, at least 6-fold more, at least 7-fold more, at least 8-fold more, at least 9-fold more, at least 10-fold more) of a therapeutic and/or prophylactic by a nanoparticle to a target tissue of interest (*e.g.*, mammalian liver) compared to the level of delivery of a therapeutic and/or

prophylactic by a control nanoparticle to a target tissue of interest (*e.g.*, MC3, KC2, or DLinDMA). The level of delivery of a nanoparticle to a particular tissue may be measured by comparing the amount of protein produced in a tissue to the weight of said tissue, comparing the amount of therapeutic and/or prophylactic in a tissue to the weight of said

5 tissue, comparing the amount of protein produced in a tissue to the amount of total protein in said tissue, or comparing the amount of therapeutic and/or prophylactic in a tissue to the amount of total therapeutic and/or prophylactic in said tissue. It will be understood that the enhanced delivery of a nanoparticle to a target tissue need not be determined in a subject being treated, it may be determined in a surrogate such as an animal model (*e.g.*, a rat model).

10 In certain embodiments, a nanoparticle composition including a compound according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) has substantively the same level of delivery enhancement regardless of administration routes. For example, certain compounds disclosed herein exhibit similar delivery enhancement when they are used for delivering a therapeutic and/or

15 prophylactic either intravenously or intramuscularly. In other embodiments, certain compounds disclosed herein exhibit a higher level of delivery enhancement when they are used for delivering a therapeutic and/or prophylactic intramuscularly than intravenously.

[0064] As used herein, the term “specific delivery,” “specifically deliver,” or “specifically delivering” means delivery of more (*e.g.*, at least 1.5 fold more, at least 2-fold

20 more, at least 3-fold more, at least 4-fold more, at least 5-fold more, at least 6-fold more, at least 7-fold more, at least 8-fold more, at least 9-fold more, at least 10-fold more) of a therapeutic and/or prophylactic by a nanoparticle to a target tissue of interest (*e.g.*, mammalian liver) compared to an off-target tissue (*e.g.*, mammalian spleen). The level of delivery of a nanoparticle to a particular tissue may be measured by comparing the amount of

25 protein produced in a tissue to the weight of said tissue, comparing the amount of therapeutic and/or prophylactic in a tissue to the weight of said tissue, comparing the amount of protein produced in a tissue to the amount of total protein in said tissue, or comparing the amount of therapeutic and/or prophylactic in a tissue to the amount of total therapeutic and/or prophylactic in said tissue. For example, for renovascular targeting, a therapeutic and/or

30 prophylactic is specifically provided to a mammalian kidney as compared to the liver and spleen if 1.5, 2-fold, 3-fold, 5-fold, 10-fold, 15 fold, or 20 fold more therapeutic and/or prophylactic per 1 g of tissue is delivered to a kidney compared to that delivered to the liver

or spleen following systemic administration of the therapeutic and/or prophylactic. It will be understood that the ability of a nanoparticle to specifically deliver to a target tissue need not be determined in a subject being treated, it may be determined in a surrogate such as an animal model (*e.g.*, a rat model).

5 [0065] As used herein, “encapsulation efficiency” refers to the amount of a therapeutic and/or prophylactic that becomes part of a nanoparticle composition, relative to the initial total amount of therapeutic and/or prophylactic used in the preparation of a nanoparticle composition. For example, if 97 mg of therapeutic and/or prophylactic are encapsulated in a nanoparticle composition out of a total 100 mg of therapeutic and/or prophylactic initially
10 provided to the composition, the encapsulation efficiency may be given as 97%. As used herein, “encapsulation” may refer to complete, substantial, or partial enclosure, confinement, surrounding, or encasement.

[0066] As used herein, “encapsulation”, “encapsulated”, “loaded”, and “associated” may refer to complete, substantial, or partial enclosure, confinement, surrounding, or encasement.

15 As used herein, “encapsulation” or “association” may refer to the process of confining an individual nucleic acid molecule within a nanoparticle and/or establishing a physiochemical relationship between an individual nucleic acid molecule and a nanoparticle. As used herein, an “empty nanoparticle” may refer to a nanoparticle that is substantially free of a therapeutic or prophylactic agent. As used herein, an “empty nanoparticle” or an “empty lipid
20 nanoparticle” may refer to a nanoparticle that is substantially free of a nucleic acid. As used herein, an “empty nanoparticle” or an “empty lipid nanoparticle” may refer to a nanoparticle that is substantially free of a nucleotide or a polypeptide. As used herein, an “empty nanoparticle” or an “empty lipid nanoparticle” may refer to a nanoparticle that consists substantially of only lipid components. As used herein, a “loaded nanoparticle” or a “loaded
25 lipid nanoparticle” (also referred to as a “full nanoparticle” or a “full lipid nanoparticle”) may refer to a nanoparticle comprising the components of the empty nanoparticle, and a therapeutic or prophylactic agent. As used herein, a “loaded nanoparticle” or a “loaded lipid nanoparticle” (also referred to as a “full nanoparticle” or a “full lipid nanoparticle”) may refer to a nanoparticle comprising the components of the empty nanoparticle, and a nucleotide or
30 polypeptide. As used herein, a “loaded nanoparticle” or a “loaded lipid nanoparticle” (also referred to as a “full nanoparticle” or a “full lipid nanoparticle”) may refer to a nanoparticle comprising the components of the empty nanoparticle, and a nucleic acid.

[0067] As used herein, “expression” of a nucleic acid sequence refers to translation of an mRNA into a polypeptide or protein and/or post-translational modification of a polypeptide or protein.

[0068] As used herein, the term “in vitro” refers to events that occur in an artificial
5 environment, *e.g.*, in a test tube or reaction vessel, in cell culture, in a Petri dish, etc., rather than within an organism (*e.g.*, animal, plant, or microbe).

[0069] As used herein, the term “in vivo” refers to events that occur within an organism (*e.g.*, animal, plant, or microbe or cell or tissue thereof).

[0070] As used herein, the term “ex vivo” refers to events that occur outside of an
10 organism (*e.g.*, animal, plant, or microbe or cell or tissue thereof). Ex vivo events may take place in an environment minimally altered from a natural (*e.g.*, in vivo) environment.

[0071] As used herein, the term “isomer” means any geometric isomer, tautomer, zwitterion, stereoisomer, enantiomer, or diastereomer of a compound. Compounds may include one or more chiral centers and/or double bonds and may thus exist as stereoisomers,
15 such as double-bond isomers (*i.e.*, geometric E/Z isomers) or diastereomers (*e.g.*, enantiomers (*i.e.*, (+) or (-)) or *cis/trans* isomers). The present disclosure encompasses any and all isomers of the compounds described herein, including stereomerically pure forms (*e.g.*, geometrically pure, enantiomerically pure, or diastereomerically pure) and enantiomeric and stereoisomeric mixtures, *e.g.*, racemates. Enantiomeric and stereomeric mixtures of
20 compounds and means of resolving them into their component enantiomers or stereoisomers are well-known.

[0072] “Tautomer” is one of two or more structural isomers that exist in equilibrium and is readily converted from one isomeric form to another. This conversion results in the formal migration of a hydrogen atom accompanied by a switch of adjacent conjugated double bonds.
25 Tautomers exist as a mixture of a tautomeric set in solution. In solutions where tautomerization is possible, a chemical equilibrium of the tautomers will be reached. The exact ratio of the tautomers depends on several factors, including temperature, solvent and pH. The concept of tautomers that are interconvertible by tautomerization is called tautomerism.

[0073] Of the various types of tautomerism that are possible, two are commonly
30 observed. In keto-enol tautomerism a simultaneous shift of electrons and a hydrogen atom occurs. Ring-chain tautomerism arises as a result of the aldehyde group (-CHO) in a sugar

chain molecule reacting with one of the hydroxy groups (-OH) in the same molecule to give it a cyclic (ring-shaped) form as exhibited by glucose.

- [0074] Common tautomeric pairs are: ketone-enol, amide-nitrile, lactam-lactim, amide-imidic acid tautomerism in heterocyclic rings (*e.g.*, in nucleobases such as guanine, thymine and cytosine), imine-enamine and enamine-enamine. An example of tautomerism in di-
- 5 substituted guanidine is shown below.

- [0075] It is to be understood that the compounds of the disclosure may be depicted as different tautomers. It should also be understood that when compounds have tautomeric
- 10 forms, all tautomeric forms are intended to be included in the scope of the disclosure, and the naming of the compounds does not exclude any tautomer form.

[0076] As used herein, a “lipid component” is that component of a nanoparticle composition that includes one or more lipids. For example, the lipid component may include one or more cationic/ionizable, PEGylated, structural, or other lipids, such as phospholipids.

- 15 [0077] As used herein, a “linker” is a moiety connecting two moieties, for example, the connection between two nucleosides of a cap species. A linker may include one or more groups including but not limited to phosphate groups (*e.g.*, phosphates, boranophosphates, thiophosphates, selenophosphates, and phosphonates), alkyl groups, amides, or glycerols. For example, two nucleosides of a cap analog may be linked at their 5' positions by a
- 20 triphosphate group or by a chain including two phosphate moieties and a boranophosphate moiety.

- [0078] As used herein, “methods of administration” may include intravenous, intramuscular, intradermal, subcutaneous, or other methods of delivering a composition to a subject. A method of administration may be selected to target delivery (*e.g.*, to specifically
- 25 deliver) to a specific region or system of a body.

[0079] As used herein, “modified” means non-natural. For example, an RNA may be a modified RNA. That is, an RNA may include one or more nucleobases, nucleosides, nucleotides, or linkers that are non-naturally occurring. A “modified” species may also be referred to herein as an “altered” species. Species may be modified or altered chemically,

structurally, or functionally. For example, a modified nucleobase species may include one or more substitutions that are not naturally occurring.

[0080] As used herein, the “N:P ratio” is the molar ratio of ionizable (in the physiological pH range) nitrogen atoms in a lipid to phosphate groups in an RNA, *e.g.*, in a nanoparticle composition including a lipid component and an RNA.

[0081] As used herein, a “nanoparticle composition” is a composition comprising one or more lipids. Nanoparticle compositions are typically sized on the order of micrometers or smaller and may include a lipid bilayer. Nanoparticle compositions encompass lipid nanoparticles (LNPs), liposomes (*e.g.*, lipid vesicles), and lipoplexes. For example, a nanoparticle composition may be a liposome having a lipid bilayer with a diameter of 500 nm or less.

[0082] As used herein, “naturally occurring” means existing in nature without artificial aid.

[0083] As used herein, “patient” refers to a subject who may seek or be in need of treatment, requires treatment, is receiving treatment, will receive treatment, or a subject who is under care by a trained professional for a particular disease or condition.

[0084] As used herein, a “PEG lipid” or “PEGylated lipid” refers to a lipid comprising a polyethylene glycol component.

[0085] The phrase “pharmaceutically acceptable” is used herein to refer to those compounds, materials, compositions, and/or dosage forms which are, within the scope of sound medical judgment, suitable for use in contact with the tissues of human beings and animals without excessive toxicity, irritation, allergic response, or other problem or complication, commensurate with a reasonable benefit/risk ratio.

[0086] The phrase “pharmaceutically acceptable excipient,” as used herein, refers to any ingredient other than the compounds described herein (for example, a vehicle capable of suspending, complexing, or dissolving the active compound) and having the properties of being substantially nontoxic and non-inflammatory in a patient. Excipients may include, for example: anti-adherents, antioxidants, binders, coatings, compression aids, disintegrants, dyes (colors), emollients, emulsifiers, fillers (diluent), film formers or coatings, flavors, fragrances, glidants (flow enhancers), lubricants, preservatives, printing inks, sorbents, suspending or dispersing agents, sweeteners, and waters of hydration. Exemplary excipients include, but are not limited to: butylated hydroxytoluene (BHT), calcium carbonate, calcium

phosphate (dibasic), calcium stearate, croscarmellose, cross-linked polyvinyl pyrrolidone, citric acid, crospovidone, cysteine, ethylcellulose, gelatin, hydroxypropyl cellulose, hydroxypropyl methylcellulose, lactose, magnesium stearate, maltitol, mannitol, methionine, methylcellulose, methyl paraben, microcrystalline cellulose, polyethylene glycol, polyvinyl pyrrolidone, povidone, pregelatinized starch, propyl paraben, retinyl palmitate, shellac, silicon dioxide, sodium carboxymethyl cellulose, sodium citrate, sodium starch glycolate, sorbitol, starch (corn), stearic acid, sucrose, talc, titanium dioxide, vitamin A, vitamin E (alpha-tocopherol), vitamin C, xylitol, and other species disclosed herein.

[0087] In the present specification, the structural formula of the compound represents a certain isomer for convenience in some cases, but the present disclosure includes all isomers, such as geometrical isomers, optical isomers based on an asymmetrical carbon, stereoisomers, tautomers, and the like, it being understood that not all isomers may have the same level of activity. In addition, a crystal polymorphism may be present for the compounds represented by the formula. It is noted that any crystal form, crystal form mixture, or anhydride or hydrate thereof is included in the scope of the present disclosure.

[0088] The term “crystal polymorphs”, “polymorphs” or “crystal forms” means crystal structures in which a compound (or a salt or solvate thereof) can crystallize in different crystal packing arrangements, all of which have the same elemental composition. Different crystal forms usually have different X-ray diffraction patterns, infrared spectral, melting points, density hardness, crystal shape, optical and electrical properties, stability and solubility. Recrystallization solvent, rate of crystallization, storage temperature, and other factors may cause one crystal form to dominate. Crystal polymorphs of the compounds can be prepared by crystallization under different conditions.

[0089] Compositions may also include salts of one or more compounds. Salts may be pharmaceutically acceptable salts. As used herein, “pharmaceutically acceptable salts” refers to derivatives of the disclosed compounds wherein the parent compound is altered by converting an existing acid or base moiety to its salt form (*e.g.*, by reacting a free base group with a suitable organic acid). Examples of pharmaceutically acceptable salts include, but are not limited to, mineral or organic acid salts of basic residues such as amines; alkali or organic salts of acidic residues such as carboxylic acids; and the like. Representative acid addition salts include acetate, adipate, alginate, ascorbate, aspartate, benzenesulfonate, benzoate, bisulfate, borate, butyrate, camphorate, camphorsulfonate, citrate, cyclopentanepropionate,

- digluconate, dodecylsulfate, ethanesulfonate, fumarate, glucoheptonate, glycerophosphate, hemisulfate, heptonate, hexanoate, hydrobromide, hydrochloride, hydroiodide, 2-hydroxy-ethanesulfonate, lactobionate, lactate, laurate, lauryl sulfate, malate, maleate, malonate, methanesulfonate, 2-naphthalenesulfonate, nicotinate, nitrate, oleate, oxalate, palmitate,
- 5 pamoate, pectinate, persulfate, 3-phenylpropionate, phosphate, picrate, pivalate, propionate, stearate, succinate, sulfate, tartrate, thiocyanate, toluenesulfonate, undecanoate, valerate salts, and the like. Representative alkali or alkaline earth metal salts include sodium, lithium, potassium, calcium, magnesium, and the like, as well as nontoxic ammonium, quaternary ammonium, and amine cations, including, but not limited to ammonium,
- 10 tetramethylammonium, tetraethylammonium, methylamine, dimethylamine, trimethylamine, triethylamine, ethylamine, and the like. The pharmaceutically acceptable salts of the present disclosure include the conventional non-toxic salts of the parent compound formed, for example, from non-toxic inorganic or organic acids. The pharmaceutically acceptable salts of the present disclosure can be synthesized from the parent compound which contains a basic
- 15 or acidic moiety by conventional chemical methods. Generally, such salts can be prepared by reacting the free acid or base forms of these compounds with a stoichiometric amount of the appropriate base or acid in water or in an organic solvent, or in a mixture of the two; generally, nonaqueous media like ether, ethyl acetate, ethanol, isopropanol, or acetonitrile are preferred.
- 20 **[0090]** As used herein, a “phospholipid” is a lipid that includes a phosphate moiety and one or more carbon chains, such as unsaturated fatty acid chains. A phospholipid may include one or more multiple (*e.g.*, double or triple) bonds (*e.g.*, one or more unsaturations). Particular phospholipids may facilitate fusion to a membrane. For example, a cationic phospholipid may interact with one or more negatively charged phospholipids of a membrane
- 25 (*e.g.*, a cellular or intracellular membrane). Fusion of a phospholipid to a membrane may allow one or more elements of a lipid-containing composition to pass through the membrane permitting, *e.g.*, delivery of the one or more elements to a cell.
- [0091]** As used herein, the “polydispersity index,” or “PDI” is a ratio that describes the homogeneity of the particle size distribution of a system. A small value, *e.g.*, less than 0.3,
- 30 indicates a narrow particle size distribution.
- [0092]** As used herein, the term “polypeptide” or “polypeptide of interest” refers to a polymer of amino acid residues typically joined by peptide bonds that can be produced

naturally (*e.g.*, isolated or purified) or synthetically. The terms "polypeptide," "peptide," and "protein" are used interchangeably herein to refer to polymers of amino acids of any length. The polymer can comprise modified amino acids. The terms also encompass an amino acid polymer that has been modified naturally or by intervention; for example, disulfide bond
5 formation, glycosylation, lipidation, acetylation, phosphorylation, or any other manipulation or modification, such as conjugation with a labeling component. Also included within the definition are, for example, polypeptides containing one or more analogs of an amino acid (including, for example, unnatural amino acids such as homocysteine, ornithine, p-acetylphenylalanine, D-amino acids, and creatine), as well as other modifications known in
10 the art. The term, as used herein, refers to proteins, polypeptides, and peptides of any size, structure, or function. Polypeptides include encoded polynucleotide products, naturally occurring polypeptides, synthetic polypeptides, homologs, orthologs, paralogs, fragments and other equivalents, variants, and analogs of the foregoing. A polypeptide can be a monomer or can be a multi-molecular complex such as a dimer, trimer or tetramer. They can also
15 comprise single chain or multichain polypeptides. Most commonly disulfide linkages are found in multichain polypeptides. The term polypeptide can also apply to amino acid polymers in which one or more amino acid residues are an artificial chemical analogue of a corresponding naturally occurring amino acid. In some embodiments, a "peptide" can be less than or equal to 50 amino acids long, *e.g.*, about 5, 10, 15, 20, 25, 30, 35, 40, 45, or 50 amino
20 acids long.

[0093] As used herein, an "RNA" refers to a ribonucleic acid that may be naturally or non-naturally occurring. For example, an RNA may include modified and/or non-naturally occurring components such as one or more nucleobases, nucleosides, nucleotides, or linkers. An RNA may include a cap structure, a chain terminating nucleoside, a stem loop, a poly A
25 sequence, and/or a polyadenylation signal. An RNA may have a nucleotide sequence encoding a polypeptide of interest.

[0094] As used herein, a "DNA" refers to a deoxyribonucleic acid that may be naturally or non-naturally occurring. For example, a DNA may be a synthetic molecule, *e.g.*, a synthetic DNA molecule produced *in vitro*. In some embodiments, the DNA molecule is a
30 recombinant molecule. As used herein, a "recombinant DNA molecule" refers to a DNA molecule that does not exist as a natural product, but is produced using molecular biology techniques.

[0095] As used herein, a “single unit dose” is a dose of any therapeutic administered in one dose/at one time/single route/single point of contact, i.e., single administration event.

[0096] As used herein, a “split dose” is the division of single unit dose or total daily dose into two or more doses.

5 [0097] As used herein, a “total daily dose” is an amount given or prescribed in 24 hour period. It may be administered as a single unit dose.

[0098] As used herein, “size” or “mean size” in the context of lipid nanoparticles (e.g., empty LNPs or loaded LNPs) refers to the mean diameter of a nanoparticle composition.

[0099] As used herein, the term “subject” or “patient” refers to any organism to which a
10 composition in accordance with the disclosure may be administered, e.g., for experimental, diagnostic, prophylactic, and/or therapeutic purposes. Typical subjects include animals (e.g., mammals such as mice, rats, rabbits, non-human primates, and humans) and/or plants.

[00100] As used herein, “targeted cells” refers to any one or more cells of interest. The cells may be found in vitro, in vivo, in situ, or in the tissue or organ of an organism. The
15 organism may be an animal, preferably a mammal, more preferably a human and most preferably a patient.

[00101] As used herein “target tissue” refers to any one or more tissue types of interest in which the delivery of a therapeutic and/or prophylactic would result in a desired biological and/or pharmacological effect. Examples of target tissues of interest include specific tissues,
20 organs, and systems or groups thereof. In particular applications, a target tissue may be a kidney, a lung, a spleen, vascular endothelium in vessels (e.g., intra-coronary or intra-femoral), or tumor tissue (e.g., via intratumoral injection). An “off-target tissue” refers to any one or more tissue types in which the expression of the encoded protein does not result in a desired biological and/or pharmacological effect. In particular applications, off-target
25 tissues may include the liver and the spleen.

[00102] The term “therapeutic agent” or “prophylactic agent” refers to any agent that, when administered to a subject, has a therapeutic, diagnostic, and/or prophylactic effect and/or elicits a desired biological and/or pharmacological effect. Therapeutic agents are also referred to as “actives” or “active agents.” Such agents include, but are not limited to,
30 cytotoxins, radioactive ions, chemotherapeutic agents, small molecule drugs, proteins, and nucleic acids.

[00103] As used herein, the term “therapeutically effective amount” means an amount of an agent to be delivered (*e.g.*, nucleic acid, drug, composition, therapeutic agent, diagnostic agent, prophylactic agent, etc.) that is sufficient, when administered to a subject suffering from or susceptible to an infection, disease, disorder, and/or condition, to treat, improve
5 symptoms of, diagnose, prevent, and/or delay the onset of the infection, disease, disorder, and/or condition.

[00104] As used herein, “transfection” refers to the introduction of a species (*e.g.*, an RNA) into a cell. Transfection may occur, for example, *in vitro*, *ex vivo*, or *in vivo*.

[00105] As used herein, the term “treating” refers to partially or completely alleviating, ameliorating, improving, relieving, delaying onset of, inhibiting progression of, reducing severity of, and/or reducing incidence of one or more symptoms or features of a particular
10 infection, disease, disorder, and/or condition. For example, “treating” cancer may refer to inhibiting survival, growth, and/or spread of a tumor. Treatment may be administered to a subject who does not exhibit signs of a disease, disorder, and/or condition and/or to a subject
15 who exhibits only early signs of a disease, disorder, and/or condition for the purpose of decreasing the risk of developing pathology associated with the disease, disorder, and/or condition.

[00106] As used herein, the “zeta potential” is the electrokinetic potential of a lipid, *e.g.*, in a particle composition.

20 ***Nanoparticle compositions***

[00107] The disclosure also features lipid nanoparticles comprising a compound according to (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) as described herein.

[00108] In some embodiments, the largest dimension of a nanoparticle composition is 1
25 μm or shorter (*e.g.*, 1 μm , 900 nm, 800 nm, 700 nm, 600 nm, 500 nm, 400 nm, 300 nm, 200 nm, 175 nm, 150 nm, 125 nm, 100 nm, 75 nm, 50 nm, or shorter), *e.g.*, when measured by dynamic light scattering (DLS), transmission electron microscopy, scanning electron microscopy, or another method. Nanoparticle compositions include, for example, lipid nanoparticles (LNPs; *e.g.*, empty LNPs or loaded LNPs), liposomes, lipid vesicles, and
30 lipoplexes. In some embodiments, nanoparticle compositions are vesicles including one or more lipid bilayers. In certain embodiments, a nanoparticle composition includes two or more concentric bilayers separated by aqueous compartments. Lipid bilayers may be

functionalized and/or cross-linked to one another. Lipid bilayers may include one or more ligands, proteins, or channels.

[00109] Nanoparticle compositions comprise a lipid component including at least one compound according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb). For example, the lipid component of a nanoparticle composition may include one or more of compounds of Table 1. Nanoparticle compositions may also include a variety of other components. For example, the lipid component of a nanoparticle composition may include one or more other lipids in addition to a lipid according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb).

Cationic/ionizable lipids

[00110] The lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or more cationic and/or ionizable lipids (e.g., lipids that may have a positive or partial positive charge at physiological pH) in addition to a lipid according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb). Cationic and/or ionizable lipids may be selected from the non-limiting group consisting of 3-(didodecylamino)-N1,N1,4-tridodecyl-1-piperazineethanamine (KL10), N1-[2-(didodecylamino)ethyl]-N1,N4,N4-tridodecyl-1,4-piperazinediethanamine (KL22), 14,25-ditridecyl-15,18,21,24-tetraaza-octatriacontane (KL25), 1,2-dilinoleyloxy-N,N-dimethylaminopropane (DLin-DMA), 2,2-dilinoleyloxy-4-dimethylaminomethyl-[1,3]-dioxolane (DLin-K-DMA), heptatriaconta-6,9,28,31-tetraen-19-yl 4-(dimethylamino)butanoate (DLin-MC3-DMA), 2,2-dilinoleyloxy-4-(2-dimethylaminoethyl)-[1,3]-dioxolane (DLin-KC2-DMA), 1,2-dioleyloxy-N,N-dimethylaminopropane (DODMA), 2-({8-[(3 β)-cholest-5-en-3-yloxy]octyl}oxy)-N,N-dimethyl-3-[(9Z,12Z)-octadeca-9,12-dien-1-yloxy]propan-1-amine (Octyl-CLinDMA), (2R)-2-({8-[(3 β)-cholest-5-en-3-yloxy]octyl}oxy)-N,N-dimethyl-3-[(9Z,12Z)-octadeca-9,12-dien-1-yloxy]propan-1-amine (Octyl-CLinDMA (2R)), and (2S)-2-({8-[(3 β)-cholest-5-en-3-yloxy]octyl}oxy)-N,N-dimethyl-3-[(9Z,12Z)-octadeca-9,12-dien-1-yloxy]propan-1-amine (Octyl-CLinDMA (2S)). In addition to these, a cationic lipid may also be a lipid including a cyclic amine group.

Structural lipids

[00111] The lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or more structural lipids. Structural lipids can be selected from the group consisting of, but are

not limited to, cholesterol, fecosterol, sitosterol, ergosterol, campesterol, stigmasterol, brassicasterol, tomatidine, tomatine, ursolic acid, alpha-tocopherol, and mixtures thereof. In some embodiments, the structural lipid is cholesterol. In some embodiments, the structural lipid includes cholesterol and a corticosteroid (such as prednisolone, dexamethasone, prednisone, and hydrocortisone), or a combination thereof. In some embodiments, the

Phospholipids

[00112] The lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or more phospholipids, such as one or more (poly)unsaturated lipids. Phospholipids may assemble into one or more lipid bilayers. In general, phospholipids may include a phospholipid moiety and one or more fatty acid moieties. For example, a phospholipid may be a lipid according to Formula (IV):

in which R_p represents a phospholipid moiety and R^A and R^B represent fatty acid moieties with or without unsaturation that may be the same or different. A phospholipid moiety may be selected from the non-limiting group consisting of phosphatidyl choline, phosphatidyl ethanolamine, phosphatidyl glycerol, phosphatidyl serine, phosphatidic acid, 2-lysophosphatidyl choline, and a sphingomyelin. A fatty acid moiety may be selected from the non-limiting group consisting of lauric acid, myristic acid, myristoleic acid, palmitic acid, palmitoleic acid, stearic acid, oleic acid, linoleic acid, alpha-linolenic acid, erucic acid, phytanic acid, arachidic acid, arachidonic acid, eicosapentaenoic acid, behenic acid, docosapentaenoic acid, and docosahexaenoic acid. Non-natural species including natural species with modifications and substitutions including branching, oxidation, cyclization, and

alkynes are also contemplated. For example, a phospholipid may be functionalized with or cross-linked to one or more alkynes (*e.g.*, an alkenyl group in which one or more double bonds is replaced with a triple bond). Under appropriate reaction conditions, an alkyne group may undergo a copper-catalyzed cycloaddition upon exposure to an azide. Such reactions may be useful in functionalizing a lipid bilayer of a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) to facilitate membrane permeation or cellular recognition or in conjugating a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) to a useful component such as a targeting or imaging moiety (*e.g.*, a dye).

[00113] Phospholipids useful in the compositions and methods may be selected from the non-limiting group consisting of 1,2-distearoyl-*sn*-glycero-3-phosphocholine (DSPC), 1,2-dioleoyl-*sn*-glycero-3-phosphoethanolamine (DOPE), 1,2-dilinoleoyl-*sn*-glycero-3-phosphocholine (DLPC), 1,2-dimyristoyl-*sn*-glycero-phosphocholine (DMPC), 1,2-dioleoyl-*sn*-glycero-3-phosphocholine (DOPC), 1,2-dipalmitoyl-*sn*-glycero-3-phosphocholine (DPPC), 1,2-diundecanoyl-*sn*-glycero-phosphocholine (DUPC), 1-palmitoyl-2-oleoyl-*sn*-glycero-3-phosphocholine (POPC), 1,2-di-O-octadecenyl-*sn*-glycero-3-phosphocholine (18:0 Diether PC), 1-oleoyl-2-cholesterylhemisuccinoyl-*sn*-glycero-3-phosphocholine (OChemSPC), 1-hexadecyl-*sn*-glycero-3-phosphocholine (C16 Lyso PC), 1,2-dilinolenoyl-*sn*-glycero-3-phosphocholine, 1,2-diarachidonoyl-*sn*-glycero-3-phosphocholine, 1,2-didocosaheptaenoyl-*sn*-glycero-3-phosphocholine, 1,2-diphytanoyl-*sn*-glycero-3-phosphoethanolamine (ME 16.0 PE), 1,2-distearoyl-*sn*-glycero-3-phosphoethanolamine, 1,2-dilinoleoyl-*sn*-glycero-3-phosphoethanolamine, 1,2-dilinolenoyl-*sn*-glycero-3-phosphoethanolamine, 1,2-diarachidonoyl-*sn*-glycero-3-phosphoethanolamine, 1,2-didocosaheptaenoyl-*sn*-glycero-3-phosphoethanolamine, 1,2-dioleoyl-*sn*-glycero-3-phosphorac-(1-glycerol) sodium salt (DOPG), dipalmitoylphosphatidylglycerol (DPPG), palmitoyl-oleoylphosphatidylethanolamine (POPE), distearoyl-phosphatidyl-ethanolamine (DSPE), dipalmitoyl phosphatidyl ethanolamine (DPPE), dimyristoylphosphoethanolamine (DMPE), 1-stearoyl-2-oleoyl-phosphatidylethanolamine (SOPE), 1-stearoyl-2-oleoyl-phosphatidylcholine (SOPC), sphingomyelin, phosphatidylcholine, phosphatidylethanolamine, phosphatidylserine, phosphatidylinositol, phosphatidic acid, palmitoyl-oleoyl phosphatidylcholine, lysophosphatidylcholine, lysophosphatidylethanolamine (LPE), and mixtures thereof. In some embodiments, a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) includes DSPC. In certain embodiments,

a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) includes DOPE. In some embodiments, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) includes both DSPC and DOPE.

5 PEG lipids

[00114] The lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or more PEG or PEG-modified lipids. Such species may be alternately referred to as PEGylated lipids. A PEG lipid is a lipid modified with polyethylene glycol. A PEG lipid may be selected from the non-limiting group consisting of PEG-modified

phosphatidylethanolamines, PEG-modified phosphatidic acids, PEG-modified ceramides (PEG-CER), PEG-modified dialkylamines, PEG-modified diacylglycerols (PEG-DEG), PEG-modified dialkylglycerols, and mixtures thereof. For example, a PEG lipid may be PEG-c-DOMG, PEG-DMG, PEG-DLPE, PEG-DMPE, PEG-DPPC, or a PEG-DSPE lipid.

[00115] In certain embodiments, the PEG lipid is selected from the group consisting of a PEG-modified phosphatidylethanolamine, a PEG-modified phosphatidic acid, a PEG-modified ceramide, a PEG-modified dialkylamine, a PEG-modified diacylglycerol, and a PEG-modified dialkylglycerol.

[00116] In certain embodiments, PEG lipid is selected from the group consisting of 1,2-dimyristoyl-sn-glycerol methoxypolyethylene glycol (PEG-DMG), 1,2-distearoyl-sn-glycero-3-phosphoethanolamine-N-[amino(polyethylene glycol)] (PEG-DSPE), PEG-disteryl glycerol (PEG-DSG), PEG-dipalmetoleyl, PEG-dioleyl, PEG-distearyl, PEG-diacylglycamide (PEG-DAG), PEG-dipalmitoyl phosphatidylethanolamine (PEG-DPPE), or PEG-1,2-dimyristyloxylpropyl-3-amine (PEG-c-DMA). For example, in some embodiments, the PEG lipid is PEG-DMG.

25 **[00117]** In certain embodiments, the PEG lipid is a compound of Formula (PL-I):

or a salt thereof, wherein:

R^{3PL1} is $-OR^{OPL1}$.

R^{OPL1} is hydrogen, optionally substituted alkyl, or an oxygen protecting group;

30 r^{PL1} is an integer between 1 and 100, inclusive;

- L^1 is optionally substituted C_{1-10} alkylene, wherein at least one methylene of the optionally substituted C_{1-10} alkylene is independently replaced with optionally substituted carbocyclylene, optionally substituted heterocyclylene, optionally substituted arylene, optionally substituted heteroarylene, O, $N(R^{NPL1})$, S, C(O), C(O) $N(R^{NPL1})$, $NR^{NPL1}C(O)$, -
- 5 C(O)O, OC(O), OC(O)O, OC(O) $N(R^{NPL1})$, $NR^{NPL1}C(O)O$, or $NR^{NPL1}C(O)N(R^{NPL1})$;

D is a moiety obtained by click chemistry or a moiety cleavable under physiological conditions;

m^{PL1} is 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, or 10;

- 10 each instance of L^2 is independently a bond or optionally substituted C_{1-6} alkylene, wherein one methylene unit of the optionally substituted C_{1-6} alkylene is optionally replaced with O, $N(R^{NPL1})$, S, C(O), C(O) $N(R^{NPL1})$, $NR^{NPL1}C(O)$, C(O)O, OC(O), OC(O)O, -
- OC(O) $N(R^{NPL1})$, $NR^{NPL1}C(O)O$, or $NR^{NPL1}C(O)N(R^{NPL1})$;

- each instance of R^{2SL} is independently optionally substituted C_{1-30} alkyl, optionally
- 15 substituted C_{1-30} alkenyl, or optionally substituted C_{1-30} alkynyl; optionally wherein one or more methylene units of R^{2SL} are independently replaced with optionally substituted carbocyclylene, optionally substituted heterocyclylene, optionally substituted arylene, optionally substituted heteroarylene, $N(R^{NPL1})$, O, S, C(O), C(O) $N(R^{NPL1})$, $NR^{NPL1}C(O)$, -
- $NR^{NPL1}C(O)N(R^{NPL1})$, C(O)O, OC(O), OC(O)O, OC(O) $N(R^{NPL1})$, $NR^{NPL1}C(O)O$, C(O)S, -
- 20 SC(O), C(=NR^{NPL1}), C(=NR^{NPL1}) $N(R^{NPL1})$, $NR^{NPL1}C(=NR^{NPL1})$, -
- $NR^{NPL1}C(=NR^{NPL1})N(R^{NPL1})$, C(S), C(S) $N(R^{NPL1})$, $NR^{NPL1}C(S)$, $NR^{NPL1}C(S)N(R^{NPL1})$, S(O), -
- OS(O), S(O)O, OS(O)O, OS(O)₂, S(O)₂O, OS(O)₂O, $N(R^{NPL1})S(O)$, S(O) $N(R^{NPL1})$, -
- $N(R^{NPL1})S(O)N(R^{NPL1})$, OS(O) $N(R^{NPL1})$, $N(R^{NPL1})S(O)O$, S(O)₂, $N(R^{NPL1})S(O)$ ₂, -
- S(O)₂ $N(R^{NPL1})$, $N(R^{NPL1})S(O)$ ₂ $N(R^{NPL1})$, OS(O)₂ $N(R^{NPL1})$, or $N(R^{NPL1})S(O)$ ₂O;

- 25 each instance of R^{NPL1} is independently hydrogen, optionally substituted alkyl, or a nitrogen protecting group;

Ring B is optionally substituted carbocyclyl, optionally substituted heterocyclyl, optionally substituted aryl, or optionally substituted heteroaryl; and

p^{SL} is 1 or 2.

[00123] In certain embodiments, the PEG lipid is a compound of Formula (PEG-1):

[00124] In certain embodiments, the PEG lipid is a compound of Formula (PL-III):

(PL-III), or a salt or isomer thereof, wherein

5 s^{PL1} is an integer between 1 and 100.

[00125] In certain embodiments, the PEG lipid is a compound of following formula:

[00126] In certain embodiments, the incorporation of lipids of one of formulae (PL-I), PL-I-OH), (PL-II), (PL-II-OH), (PL-III), PEG_{2k}-DMG, or PEG-1 in the nanoparticle formulation
 10 can improve the pharmacokinetics and/or biodistribution of the lipid nanoparticle formulations. For example, incorporation of lipids of one of formulae (PL-II-OH), (PL-IIa-OH), (PL-II), or PEG-1 in the nanoparticle formulation can reduce the accelerated blood clearance (ABC) effect.

Adjuvants

15 [00127] In some embodiments, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) that includes one or more lipids described herein may further include one or more adjuvants, e.g., Glucopyranosyl Lipid Adjuvant (GLA), CpG oligodeoxynucleotides (e.g., Class A or B), poly(I:C), aluminum hydroxide, and Pam3CSK4.

Therapeutic agents

20 [00128] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may include one or more therapeutic and/or prophylactics. The disclosure features methods of delivering a therapeutic and/or prophylactic to a mammalian cell or organ, producing a polypeptide of interest in a mammalian cell, and treating a disease or disorder in a mammal in need thereof comprising

administering to a mammal and/or contacting a mammalian cell with a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including a therapeutic and/or prophylactic.

[00129] Therapeutic and/or prophylactics include biologically active substances and are alternately referred to as “active agents.” A therapeutic and/or prophylactic may be a
5 substance that, once delivered to a cell or organ, brings about a desirable change in the cell, organ, or other bodily tissue or system. Such species may be useful in the treatment of one or more diseases, disorders, or conditions. In some embodiments, a therapeutic and/or prophylactic is a small molecule drug useful in the treatment of a particular disease, disorder, or condition.

10 [00130] In some embodiments, a therapeutic and/or prophylactic is a vaccine, a compound (e.g., a polynucleotide or nucleic acid molecule that encodes a protein or polypeptide or peptide or a protein or polypeptide or protein) that elicits an immune response, and/or another therapeutic and/or prophylactic. Vaccines include compounds and preparations that are capable of providing immunity against one or more conditions related to infectious diseases
15 and can include mRNAs encoding infectious disease derived antigens and/or epitopes. Vaccines also include compounds and preparations that direct an immune response against cancer cells and can include mRNAs encoding tumor cell derived antigens, epitopes, and/or neopeptides. In some embodiments, a vaccine and/or a compound capable of eliciting an immune response is administered intramuscularly via a composition of the disclosure.

20 [00131] In other embodiments, a therapeutic and/or prophylactic is a protein, for example a protein needed to augment or replace a naturally-occurring protein of interest. Such proteins or polypeptides may be naturally occurring, or may be modified using methods known in the art, e.g., to increase half life. Exemplary proteins are intracellular, transmembrane, or secreted.

25 *Polynucleotides and nucleic acids*

[00132] In some embodiments, the therapeutic agent is an agent that enhances (i.e., increases, stimulates, upregulates) protein expression. Non-limiting examples of types of therapeutic agents that can be used for enhancing protein expression include RNAs, mRNAs, dsRNAs, CRISPR/Cas9 technology, ssDNAs and DNAs (e.g., expression vectors). The
30 agent that upregulates protein expression may upregulate expression of a naturally occurring or non-naturally occurring protein (e.g., a chimeric protein that has been modified to improve

half life, or one that comprises desirable amino acid changes). Exemplary proteins include intracellular, transmembrane, or secreted proteins, peptides, or polypeptides.

[00133] In some embodiments, the therapeutic agent is a DNA therapeutic agent. The DNA molecule can be a double-stranded DNA, a single-stranded DNA (ssDNA), or a
5 molecule that is a partially double-stranded DNA, i.e., has a portion that is double-stranded and a portion that is single-stranded. In some cases the DNA molecule is triple-stranded or is partially triple-stranded, i.e., has a portion that is triple stranded and a portion that is double stranded. The DNA molecule can be a circular DNA molecule or a linear DNA molecule.

[00134] A DNA therapeutic agent can be a DNA molecule that is capable of transferring a
10 gene into a cell, e.g., that encodes and can express a transcript. In other embodiments, the DNA molecule is a synthetic molecule, e.g., a synthetic DNA molecule produced in vitro. In some embodiments, the DNA molecule is a recombinant molecule. Non-limiting exemplary DNA therapeutic agents include plasmid expression vectors and viral expression vectors.

[00135] The DNA therapeutic agents described herein, e.g., DNA vectors, can include a
15 variety of different features. The DNA therapeutic agents described herein, e.g., DNA vectors, can include a non-coding DNA sequence. For example, a DNA sequence can include at least one regulatory element for a gene, e.g., a promoter, enhancer, termination element, polyadenylation signal element, splicing signal element, and the like. In some embodiments, the non-coding DNA sequence is an intron. In some embodiments, the non-
20 coding DNA sequence is a transposon. In some embodiments, a DNA sequence described herein can have a non-coding DNA sequence that is operatively linked to a gene that is transcriptionally active. In other embodiments, a DNA sequence described herein can have a non-coding DNA sequence that is not linked to a gene, i.e., the non-coding DNA does not regulate a gene on the DNA sequence.

[00136] In some embodiments, in the loaded LNP of the disclosure, the one or more
25 therapeutic and/or prophylactic agents is a nucleic acid. In some embodiments, the one or more therapeutic and/or prophylactic agents is selected from the group consisting of a ribonucleic acid (RNA) and a deoxyribonucleic acid (DNA).

[00137] For example, in some embodiments, when the therapeutic and/or prophylactic
30 agents is a DNA, the DNA is selected from the group consisting of a double-stranded DNA, a single-stranded DNA (ssDNA), a partially double-stranded DNA, a triple stranded DNA, and

a partially triple-stranded DNA. In some embodiments, the DNA is selected from the group consisting of a circular DNA, a linear DNA, and mixtures thereof.

[00138] In some embodiments, in the loaded LNP of the disclosure, the one or more therapeutic and/or prophylactic agents is selected from the group consisting of a plasmid expression vector, a viral expression vector, and mixtures thereof.

[00139] For example, in some embodiments, when the therapeutic and/or prophylactic agents is a RNA, the RNA is selected from the group consisting of a single-stranded RNA, a double-stranded RNA (dsRNA), a partially double-stranded RNA, and mixtures thereof. In some embodiments, the RNA is selected from the group consisting of a circular RNA, a linear RNA, and mixtures thereof.

[00140] For example, in some embodiments, when the therapeutic and/or prophylactic agents is a RNA, the RNA is selected from the group consisting of a short interfering RNA (siRNA), an asymmetrical interfering RNA (aiRNA), a RNA interference (RNAi) molecule, a microRNA (miRNA), an antagomir, an antisense RNA, a ribozyme, a Dicer-substrate RNA (dsRNA), a small hairpin RNA (shRNA), a messenger RNA (mRNA), locked nucleic acids (LNAs) and CRISPR/Cas9 technology, and mixtures thereof.

[00141] For example, in some embodiments, when the therapeutic and/or prophylactic agents is a RNA, the RNA is selected from the group consisting of a small interfering RNA (siRNA), an asymmetrical interfering RNA (aiRNA), a microRNA (miRNA), a Dicer-substrate RNA (dsRNA), a small hairpin RNA (shRNA), a messenger RNA (mRNA), and mixtures thereof.

[00142] In some embodiments, the one or more therapeutic and/or prophylactic agents is an mRNA. In some embodiments, the one or more therapeutic and/or prophylactic agents is a modified mRNA (mmRNA).

[00143] In some embodiments, the one or more therapeutic and/or prophylactic agents is an mRNA that incorporates a micro-RNA binding site (miR binding site). Further, in some embodiments, an mRNA includes one or more of a stem loop, a chain terminating nucleoside, a polyA sequence, a polyadenylation signal, and/or a 5' cap structure.

[00144] An mRNA may be a naturally or non-naturally occurring mRNA. An mRNA may include one or more modified nucleobases, nucleosides, or nucleotides, as described below, in which case it may be referred to as a "modified mRNA" or "mmRNA." As described herein "nucleoside" is defined as a compound containing a sugar molecule (e.g., a pentose or

ribose) or derivative thereof in combination with an organic base (e.g., a purine or pyrimidine) or a derivative thereof (also referred to herein as “nucleobase”). As described herein, “nucleotide” is defined as a nucleoside including a phosphate group.

[00145] An mRNA may include a 5' untranslated region (5'-UTR), a 3' untranslated region (3'-UTR), and/or a coding region (e.g., an open reading frame). An mRNA may include any suitable number of base pairs, including tens (e.g., 10, 20, 30, 40, 50, 60, 70, 80, 90 or 100), hundreds (e.g., 200, 300, 400, 500, 600, 700, 800, or 900) or thousands (e.g., 1000, 2000, 3000, 4000, 5000, 6000, 7000, 8000, 9000, 10,000) of base pairs. Any number (e.g., all, some, or none) of nucleobases, nucleosides, or nucleotides may be an analog of a canonical species, substituted, modified, or otherwise non-naturally occurring. In certain embodiments, all of a particular nucleobase type may be modified. In some embodiments, all uracils or uridines are modified. When all nucleobases, nucleosides, or nucleotides are modified, *e.g.*, all uracils or uridines, the mRNA can be referred to as “fully modified”, *e.g.*, for uracil or uridine.

[00146] In some embodiments, an mRNA as described herein may include a 5' cap structure, a chain terminating nucleotide, optionally a Kozak sequence (also known as a Kozak consensus sequence), a stem loop, a polyA sequence, and/or a polyadenylation signal.

[00147] A 5' cap structure or cap species is a compound including two nucleoside moieties joined by a linker and may be selected from a naturally occurring cap, a non-naturally occurring cap or cap analog, or an anti-reverse cap analog (ARCA). A cap species may include one or more modified nucleosides and/or linker moieties. For example, a natural mRNA cap may include a guanine nucleotide and a guanine (G) nucleotide methylated at the 7 position joined by a triphosphate linkage at their 5' positions, *e.g.*, m7G(5')ppp(5')G, commonly written as m7GpppG. A cap species may also be an anti-reverse cap analog. A non-limiting list of possible cap species includes m7GpppG, m7Gpppm7G, m73'dGpppG, m27,O3'GpppG, m27,O3'GppppG, m27,O2'GppppG, m7Gpppm7G, m73'dGpppG, m27,O3'GpppG, m27,O3'GppppG, and m27,O2'GppppG.

[00148] An mRNA may instead or additionally include a chain terminating nucleoside. For example, a chain terminating nucleoside may include those nucleosides deoxygenated at the 2' and/or 3' positions of their sugar group. Such species may include 3' deoxyadenosine (cordycepin), 3' deoxyuridine, 3' deoxycytosine, 3' deoxyguanosine, 3' deoxythymine, and 2',3' dideoxynucleosides, such as 2',3' dideoxyadenosine, 2',3' dideoxyuridine, 2',3'

dideoxycytosine, 2',3' dideoxyguanosine, and 2',3' dideoxythymine. In some embodiments, incorporation of a chain terminating nucleotide into an mRNA, for example at the 3'-terminus, may result in stabilization of the mRNA.

[00149] An mRNA may instead or additionally include a stem loop, such as a histone stem
 5 loop. A stem loop may include 2, 3, 4, 5, 6, 7, 8, or more nucleotide base pairs. For example, a stem loop may include 4, 5, 6, 7, or 8 nucleotide base pairs. A stem loop may be located in any region of an mRNA. For example, a stem loop may be located in, before, or after an untranslated region (a 5' untranslated region or a 3' untranslated region), a coding region, or a poly A sequence or tail. In some embodiments, a stem loop may affect one or
 10 more function(s) of an mRNA, such as initiation of translation, translation efficiency, and/or transcriptional termination.

[00150] An mRNA may instead or additionally include a poly A sequence and/or polyadenylation signal. A poly A sequence may be comprised entirely or mostly of adenine nucleotides or analogs or derivatives thereof. A poly A sequence may also comprise
 15 stabilizing nucleotides or analogs. For example, a poly A sequence can include deoxythymidine, *e.g.*, inverted (or reverse linkage) deoxythymidine (dT), as a stabilizing nucleotide or analog. Details on using inverted dT and other stabilizing poly A sequence modifications can be found, for example, in WO2017/049275 A2, the content of which is incorporated herein by reference. A poly A sequence may be a tail located adjacent to a 3'
 20 untranslated region of an mRNA. In some embodiments, a poly A sequence may affect the nuclear export, translation, and/or stability of an mRNA.

[00151] An mRNA may instead or additionally include a microRNA binding site. MicroRNA binding sites (or miR binding sites) can be used to regulate mRNA expression in various tissues or cell types. In exemplary embodiments, miR binding sites are engineered
 25 into 3' UTR sequences of an mRNA to regulate, *e.g.*, enhance degradation of mRNA in cells or tissues expressing the cognate miR. Such regulation is useful to regulate or control "off-target" expression in mRNAs, *i.e.*, expression in undesired cells or tissues *in vivo*. Details on using miR binding sites can be found, for example, in WO 2017/062513 A2, the content of which is incorporated herein by reference.

[00152] In some embodiments, an mRNA is a bicistronic mRNA comprising a first coding
 30 region and a second coding region with an intervening sequence comprising an internal ribosome entry site (IRES) sequence that allows for internal translation initiation between the

first and second coding regions, or with an intervening sequence encoding a self-cleaving peptide, such as a 2A peptide. IRES sequences and 2A peptides are typically used to enhance expression of multiple proteins from the same vector. A variety of IRES sequences are known and available in the art and may be used, including, e.g., the encephalomyocarditis virus IRES.

[00153] In some embodiments, an mRNA of the disclosure comprises one or more modified nucleobases, nucleosides, or nucleotides (termed “modified mRNAs” or “mmRNAs”). In some embodiments, modified mRNAs may have useful properties, including enhanced stability, intracellular retention, enhanced translation, and/or the lack of a substantial induction of the innate immune response of a cell into which the mRNA is introduced, as compared to a reference unmodified mRNA. Therefore, use of modified mRNAs may enhance the efficiency of protein production, intracellular retention of nucleic acids, as well as possess reduced immunogenicity.

[00154] In some embodiments, an mRNA includes one or more (e.g., 1, 2, 3 or 4) different modified nucleobases, nucleosides, or nucleotides. In some embodiments, an mRNA includes one or more (e.g., 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 20, 30, 40, 50, 60, 70, 80, 90, 100, or more) different modified nucleobases, nucleosides, or nucleotides. In some embodiments, the modified mRNA may have reduced degradation in a cell into which the mRNA is introduced, relative to a corresponding unmodified mRNA.

[00155] In some embodiments, the modified nucleobase is a modified uracil. Exemplary nucleobases and nucleosides having a modified uracil include pseudouridine (ψ), pyridin-4-one ribonucleoside, 5-aza-uridine, 6-aza-uridine, 2-thio-5-aza-uridine, 2-thio-uridine (s2U), 4-thio-uridine (s4U), 4-thio-pseudouridine, 2-thio-pseudouridine, 5-hydroxy-uridine (ho5U), 5-aminoallyl-uridine, 5-halo-uridine (e.g., 5-iodo-uridine or 5-bromo-uridine), 3-methyl-uridine (m3U), 5-methoxy-uridine (mo5U), uridine 5-oxyacetic acid (cmo5U), uridine 5-oxyacetic acid methyl ester (mcmo5U), 5-carboxymethyl-uridine (cm5U), 1-carboxymethyl-pseudouridine, 5-carboxyhydroxymethyl-uridine (chm5U), 5-carboxyhydroxymethyl-uridine methyl ester (mchm5U), 5-methoxycarbonylmethyl-uridine (mcm5U), 5-methoxycarbonylmethyl-2-thio-uridine (mcm5s2U), 5-aminomethyl-2-thio-uridine (nm5s2U), 5-methylaminomethyl-uridine (mnm5U), 5-methylaminomethyl-2-thio-uridine (mnm5s2U), 5-methylaminomethyl-2-seleno-uridine (mnm5se2U), 5-carbamoylmethyl-uridine (ncm5U), 5-carboxymethylaminomethyl-uridine (cmnm5U), 5-

carboxymethylaminomethyl-2-thio-uridine (cmnm5s2U), 5-propynyl-uridine, 1-propynyl-pseudouridine, 5-taurinomethyl-uridine (tm5U), 1-taurinomethyl-pseudouridine, 5-taurinomethyl-2-thio-uridine (tm5s2U), 1-taurinomethyl-4-thio-pseudouridine, 5-methyl-uridine (m5U, i.e., having the nucleobase deoxythymine), 1-methyl-pseudouridine (m1ψ), 5-methyl-2-thio-uridine (m5s2U), 1-methyl-4-thio-pseudouridine (m1s4ψ), 4-thio-1-methyl-pseudouridine, 3-methyl-pseudouridine (m3ψ), 2-thio-1-methyl-pseudouridine, 1-methyl-1-deaza-pseudouridine, 2-thio-1-methyl-1-deaza-pseudouridine, dihydrouridine (D), dihydropseudouridine, 5,6-dihydrouridine, 5-methyl-dihydrouridine (m5D), 2-thio-dihydrouridine, 2-thio-dihydropseudouridine, 2-methoxy-uridine, 2-methoxy-4-thio-uridine, 4-methoxy-pseudouridine, 4-methoxy-2-thio-pseudouridine, N1-methyl-pseudouridine, 3-(3-amino-3-carboxypropyl)uridine (acp3U), 1-methyl-3-(3-amino-3-carboxypropyl)pseudouridine (acp3ψ), 5-(isopentenylaminomethyl)uridine (inm5U), 5-(isopentenylaminomethyl)-2-thio-uridine (inm5s2U), α-thio-uridine, 2'-O-methyl-uridine (Um), 5,2'-O-dimethyl-uridine (m5Um), 2'-O-methyl-pseudouridine (ψm), 2-thio-2'-O-methyl-uridine (s2Um), 5-methoxycarbonylmethyl-2'-O-methyl-uridine (mcm5Um), 5-carbamoylmethyl-2'-O-methyl-uridine (ncm5Um), 5-carboxymethylaminomethyl-2'-O-methyl-uridine (cmnm5Um), 3,2'-O-dimethyl-uridine (m3Um), and 5-(isopentenylaminomethyl)-2'-O-methyl-uridine (inm5Um), 1-thio-uridine, deoxythymidine, 2'-F-ara-uridine, 2'-F-uridine, 2'-OH-ara-uridine, 5-(2-carbomethoxyvinyl) uridine, and 5-[3-(1-E-propenylamino)]uridine.

[00156] In some embodiments, the modified nucleobase is a modified cytosine.

Exemplary nucleobases and nucleosides having a modified cytosine include 5-aza-cytidine, 6-aza-cytidine, pseudoisocytidine, 3-methyl-cytidine (m3C), N4-acetyl-cytidine (ac4C), 5-formyl-cytidine (f5C), N4-methyl-cytidine (m4C), 5-methyl-cytidine (m5C), 5-halo-cytidine (e.g., 5-iodo-cytidine), 5-hydroxymethyl-cytidine (hm5C), 1-methyl-pseudoisocytidine, pyrrolo-cytidine, pyrrolo-pseudoisocytidine, 2-thio-cytidine (s2C), 2-thio-5-methyl-cytidine, 4-thio-pseudoisocytidine, 4-thio-1-methyl-pseudoisocytidine, 4-thio-1-methyl-1-deaza-pseudoisocytidine, 1-methyl-1-deaza-pseudoisocytidine, zebularine, 5-aza-zebularine, 5-methyl-zebularine, 5-aza-2-thio-zebularine, 2-thio-zebularine, 2-methoxy-cytidine, 2-methoxy-5-methyl-cytidine, 4-methoxy-pseudoisocytidine, 4-methoxy-1-methyl-pseudoisocytidine, lysidine (k2C), α-thio-cytidine, 2'-O-methyl-cytidine (Cm), 5,2'-O-dimethyl-cytidine (m5Cm), N4-acetyl-2'-O-methyl-cytidine (ac4Cm), N4,2'-O-dimethyl-

cytidine (m4Cm), 5-formyl-2'-O-methyl-cytidine (f5Cm), N4,N4,2'-O-trimethyl-cytidine (m42Cm), 1-thio-cytidine, 2'-F-ara-cytidine, 2'-F-cytidine, and 2'-OH-ara-cytidine.

[00157] In some embodiments, the modified nucleobase is a modified adenine. Exemplary nucleobases and nucleosides having a modified adenine include a-thio-adenosine, 2-amino-
 5 purine, 2, 6-diaminopurine, 2-amino-6-halo-purine (e.g., 2-amino-6-chloro-purine), 6-halo-
 purine (e.g., 6-chloro-purine), 2-amino-6-methyl-purine, 8-azido-adenosine, 7-deaza-adenine,
 7-deaza-8-aza-adenine, 7-deaza-2-amino-purine, 7-deaza-8-aza-2-amino-purine, 7-deaza-2,6-
 diaminopurine, 7-deaza-8-aza-2,6-diaminopurine, 1-methyl-adenosine (m1A), 2-methyl-
 adenine (m2A), N6-methyl-adenosine (m6A), 2-methylthio-N6-methyl-adenosine (ms2m6A),
 10 N6-isopentenyl-adenosine (i6A), 2-methylthio-N6-isopentenyl-adenosine (ms2i6A), N6-(cis-
 hydroxyisopentenyl)adenosine (io6A), 2-methylthio-N6-(cis-hydroxyisopentenyl)adenosine
 (ms2io6A), N6-glycylcarbamoyl-adenosine (g6A), N6-threonylcarbamoyl-adenosine (t6A),
 N6-methyl-N6-threonylcarbamoyl-adenosine (m6t6A), 2-methylthio-N6-threonylcarbamoyl-
 adenosine (ms2g6A), N6,N6-dimethyl-adenosine (m62A), N6-hydroxynorvalylcarbamoyl-
 15 adenosine (hn6A), 2-methylthio-N6-hydroxynorvalylcarbamoyl-adenosine (ms2hn6A), N6-
 acetyl-adenosine (ac6A), 7-methyl-adenine, 2-methylthio-adenine, 2-methoxy-adenine, α -
 thio-adenosine, 2'-O-methyl-adenosine (Am), N6,2'-O-dimethyl-adenosine (m6Am),
 N6,N6,2'-O-trimethyl-adenosine (m62Am), 1,2'-O-dimethyl-adenosine (m1Am), 2'-O-
 ribosyladenosine (phosphate) (Ar(p)), 2-amino-N6-methyl-purine, 1-thio-adenosine, 8-azido-
 20 adenosine, 2'-F-ara-adenosine, 2'-F-adenosine, 2'-OH-ara-adenosine, and N6-(19-amino-
 pentaaxanonadecyl)-adenosine.

[00158] In some embodiments, the modified nucleobase is a modified guanine. Exemplary nucleobases and nucleosides having a modified guanine include a-thio-guanosine,
 inosine (I), 1-methyl-inosine (m1I), wyosine (imG), methylwyosine (mimG), 4-demethyl-
 25 wyosine (imG-14), isowyosine (imG2), wybutosine (yW), peroxywybutosine (o2yW),
 hydroxywybutosine (OhyW), undermodified hydroxywybutosine (OhyW*), 7-deaza-
 guanosine, queuosine (Q), epoxyqueuosine (oQ), galactosyl-queuosine (galQ), mannosyl-
 queuosine (manQ), 7-cyano-7-deaza-guanosine (preQ0), 7-aminomethyl-7-deaza-guanosine
 (preQ1), archaeosine (G⁺), 7-deaza-8-aza-guanosine, 6-thio-guanosine, 6-thio-7-deaza-
 30 guanosine, 6-thio-7-deaza-8-aza-guanosine, 7-methyl-guanosine (m7G), 6-thio-7-methyl-
 guanosine, 7-methyl-inosine, 6-methoxy-guanosine, 1-methyl-guanosine (m1G), N2-methyl-
 guanosine (m2G), N2,N2-dimethyl-guanosine (m22G), N2,7-dimethyl-guanosine (m2,7G),

N2, N2,7-dimethyl-guanosine (m2,2,7G), 8-oxo-guanosine, 7-methyl-8-oxo-guanosine, 1-methyl-6-thio-guanosine, N2-methyl-6-thio-guanosine, N2,N2-dimethyl-6-thio-guanosine, α -thio-guanosine, 2'-O-methyl-guanosine (Gm), N2-methyl-2'-O-methyl-guanosine (m2Gm), N2,N2-dimethyl-2'-O-methyl-guanosine (m22Gm), 1-methyl-2'-O-methyl-guanosine
 5 (m1Gm), N2,7-dimethyl-2'-O-methyl-guanosine (m2,7Gm), 2'-O-methyl-inosine (Im), 1,2'-O-dimethyl-inosine (m1Im), 2'-O-ribosylguanosine (phosphate) (Gr(p)), 1-thio-guanosine, O6-methyl-guanosine, 2'-F-ara-guanosine, and 2'-F-guanosine.

[00159] In some embodiments, an mRNA of the disclosure includes a combination of one or more of the aforementioned modified nucleobases (e.g., a combination of 2, 3 or 4 of the
 10 aforementioned modified nucleobases.)

[00160] In some embodiments, the modified nucleobase is pseudouridine (ψ), N1-methylpseudouridine (m1 ψ), 2-thiouridine, 4'-thiouridine, 5-methylcytosine, 2-thio-1-methyl-1-deaza-pseudouridine, 2-thio-1-methyl-pseudouridine, 2-thio-5-aza-uridine, 2-thio-dihydropseudouridine, 2-thio-dihydrouridine, 2-thio-pseudouridine, 4-methoxy-2-thio-
 15 pseudouridine, 4-methoxy-pseudouridine, 4-thio-1-methyl-pseudouridine, 4-thio-pseudouridine, 5-aza-uridine, dihydropseudouridine, 5-methoxyuridine, or 2'-O-methyluridine. In some embodiments, an mRNA of the disclosure includes a combination of one or more of the aforementioned modified nucleobases (e.g., a combination of 2, 3 or 4 of the aforementioned modified nucleobases.) In some embodiments, the modified nucleobase is
 20 N1-methylpseudouridine (m1 ψ) and the mRNA of the disclosure is fully modified with N1-methylpseudouridine (m1 ψ). In some embodiments, N1-methylpseudouridine (m1 ψ) represents from 75-100% of the uracils in the mRNA. In some embodiments, N1-methylpseudouridine (m1 ψ) represents 100% of the uracils in the mRNA.

[00161] In some embodiments, the modified nucleobase is a modified cytosine.
 25 Exemplary nucleobases and nucleosides having a modified cytosine include N4-acetylcytidine (ac4C), 5-methyl-cytidine (m5C), 5-halo-cytidine (e.g., 5-iodo-cytidine), 5-hydroxymethyl-cytidine (hm5C), 1-methyl-pseudoisocytidine, 2-thio-cytidine (s2C), 2-thio-5-methyl-cytidine. In some embodiments, an mRNA of the disclosure includes a combination of one or more of the aforementioned modified nucleobases (e.g., a combination
 30 of 2, 3 or 4 of the aforementioned modified nucleobases.)

[00162] In some embodiments, the modified nucleobase is a modified adenine. Exemplary nucleobases and nucleosides having a modified adenine include 7-deaza-adenine, 1-methyl-

adenosine (m1A), 2-methyl-adenine (m2A), N6-methyl-adenosine (m6A). In some embodiments, an mRNA of the disclosure includes a combination of one or more of the aforementioned modified nucleobases (e.g., a combination of 2, 3 or 4 of the aforementioned modified nucleobases.)

- 5 **[00163]** In some embodiments, the modified nucleobase is a modified guanine. Exemplary nucleobases and nucleosides having a modified guanine include inosine (I), 1-methyl-inosine (m1I), wyosine (imG), methylwyosine (mimG), 7-deaza-guanosine, 7-cyano-7-deaza-guanosine (preQ0), 7-aminomethyl-7-deaza-guanosine (preQ1), 7-methyl-guanosine (m7G), 1-methyl-guanosine (m1G), 8-oxo-guanosine, 7-methyl-8-oxo-guanosine. In some
10 embodiments, an mRNA of the disclosure includes a combination of one or more of the aforementioned modified nucleobases (e.g., a combination of 2, 3 or 4 of the aforementioned modified nucleobases.)

- [00164]** In some embodiments, the modified nucleobase is 1-methyl-pseudouridine (m1ψ), 5-methoxy-uridine (mo5U), 5-methyl-cytidine (m5C), pseudouridine (ψ), α-thio-guanosine,
15 or α-thio-adenosine. In some embodiments, an mRNA of the disclosure includes a combination of one or more of the aforementioned modified nucleobases (e.g., a combination of 2, 3 or 4 of the aforementioned modified nucleobases.)

- [00165]** In some embodiments, the mRNA comprises pseudouridine (ψ). In some embodiments, the mRNA comprises pseudouridine (ψ) and 5-methyl-cytidine (m5C). In
20 some embodiments, the mRNA comprises 1-methyl-pseudouridine (m1ψ). In some embodiments, the mRNA comprises 1-methyl-pseudouridine (m1ψ) and 5-methyl-cytidine (m5C). In some embodiments, the mRNA comprises 2-thiouridine (s2U). In some embodiments, the mRNA comprises 2-thiouridine and 5-methyl-cytidine (m5C). In some embodiments, the mRNA comprises 5-methoxy-uridine (mo5U). In some embodiments, the
25 mRNA comprises 5-methoxy-uridine (mo5U) and 5-methyl-cytidine (m5C). In some embodiments, the mRNA comprises 2'-O-methyl uridine. In some embodiments, the mRNA comprises 2'-O-methyl uridine and 5-methyl-cytidine (m5C). In some embodiments, the mRNA comprises N6-methyl-adenosine (m6A). In some embodiments, the mRNA comprises N6-methyl-adenosine (m6A) and 5-methyl-cytidine (m5C).

- 30 **[00166]** In certain embodiments, an mRNA of the disclosure is uniformly modified (i.e., fully modified, modified through-out the entire sequence) for a particular modification. For example, an mRNA can be uniformly modified with N1-methylpseudouridine (m1ψ) or 5-

methyl-cytidine (m5C), meaning that all uridines or all cytosine nucleosides in the mRNA sequence are replaced with N1-methylpseudouridine (m1ψ) or 5-methyl-cytidine (m5C). Similarly, mRNAs of the disclosure can be uniformly modified for any type of nucleoside residue present in the sequence by replacement with a modified residue such as those set forth above.

5 [00167] In some embodiments, an mRNA of the disclosure may be modified in a coding region (e.g., an open reading frame encoding a polypeptide). In other embodiments, an mRNA may be modified in regions besides a coding region. For example, in some embodiments, a 5'-UTR and/or a 3'-UTR are provided, wherein either or both may independently contain one or more different nucleoside modifications. In such embodiments, nucleoside modifications may also be present in the coding region.

[00168] The mmRNAs of the disclosure can include a combination of modifications to the sugar, the nucleobase, and/or the internucleoside linkage. These combinations can include any one or more modifications described herein.

15 [00169] Where a single modification is listed, the listed nucleoside or nucleotide represents 100 percent of that A, U, G or C nucleotide or nucleoside having been modified. Where percentages are listed, these represent the percentage of that particular A, U, G or C nucleobase triphosphate of the total amount of A, U, G, or C triphosphate present. For example, the combination: 25 % 5-Aminoallyl-CTP + 75 % CTP/ 25 % 5-Methoxy-UTP + 75 % UTP refers to a polynucleotide where 25% of the cytosine triphosphates are 5-Aminoallyl-CTP while 75% of the cytosines are CTP; whereas 25% of the uracils are 5-methoxy UTP while 75% of the uracils are UTP. Where no modified UTP is listed then the naturally occurring ATP, UTP, GTP and/or CTP is used at 100% of the sites of those nucleotides found in the polynucleotide. In this example all of the GTP and ATP nucleotides are left unmodified.

25 [00170] The mRNAs of the present disclosure, or regions thereof, may be codon optimized. Codon optimization methods are known in the art and may be useful for a variety of purposes: matching codon frequencies in host organisms to ensure proper folding, bias GC content to increase mRNA stability or reduce secondary structures, minimize tandem repeat codons or base runs that may impair gene construction or expression, customize transcriptional and translational control regions, insert or remove proteins trafficking sequences, remove/add post translation modification sites in encoded proteins (e.g.,

glycosylation sites), add, remove or shuffle protein domains, insert or delete restriction sites, modify ribosome binding sites and mRNA degradation sites, adjust translation rates to allow the various domains of the protein to fold properly, or to reduce or eliminate problem secondary structures within the polynucleotide. Codon optimization tools, algorithms and services are known in the art; non-limiting examples include services from GeneArt (Life Technologies), DNA2.0 (Menlo Park, CA) and/or proprietary methods. In some embodiments, the mRNA sequence is optimized using optimization algorithms, e.g., to optimize expression in mammalian cells or enhance mRNA stability.

5 [00171] In certain embodiments, the present disclosure includes polynucleotides having at least 80%, at least 85%, at least 90%, at least 95%, at least 98%, or at least 99% sequence identity to any of the polynucleotide sequences described herein.

[00172] mRNAs of the present disclosure may be produced by means available in the art, including but not limited to in vitro transcription (IVT) and synthetic methods. Enzymatic (IVT), solid-phase, liquid-phase, combined synthetic methods, small region synthesis, and ligation methods may be utilized. In some embodiments, mRNAs are made using IVT enzymatic synthesis methods. Accordingly, the present disclosure also includes polynucleotides, e.g., DNA, constructs and vectors that may be used to in vitro transcribe an mRNA described herein.

15 [00173] Non-natural modified nucleobases may be introduced into polynucleotides, e.g., mRNA, during synthesis or post-synthesis. In certain embodiments, modifications may be on internucleoside linkages, purine or pyrimidine bases, or sugar. In particular embodiments, the modification may be introduced at the terminal of a polynucleotide chain or anywhere else in the polynucleotide chain; with chemical synthesis or with a polymerase enzyme.

[00174] Either enzymatic or chemical ligation methods may be used to conjugate polynucleotides or their regions with different functional moieties, such as targeting or delivery agents, fluorescent labels, liquids, nanoparticles, etc. Therapeutic Agents for Reducing Protein Expression

[00175] In some embodiments, the therapeutic agent is a therapeutic agent that reduces (i.e., decreases, inhibits, downregulates) protein expression. Non-limiting examples of types of therapeutic agents that can be used for reducing protein expression include mRNAs that incorporate a micro-RNA binding site(s) (miR binding site), microRNAs (miRNAs), antagomirs, small (short) interfering RNAs (siRNAs) (including shortmers and dicer-

substrate RNAs), RNA interference (RNAi) molecules, antisense RNAs, ribozymes, small hairpin RNAs (shRNAs), locked nucleic acids (LNAs) and CRISPR/Cas9 technology.

Peptide/Polypeptide Therapeutic Agents

[00176] In some embodiments, the therapeutic agent is a peptide therapeutic agent. In
5 some embodiments the therapeutic agent is a polypeptide therapeutic agent.

[00177] In some embodiments, the peptide or polypeptide is naturally-derived, e.g., isolated from a natural source. In other embodiments, the peptide or polypeptide is a synthetic molecule, e.g., a synthetic peptide or polypeptide produced in vitro. In some
10 embodiments, the peptide or polypeptide is a recombinant molecule. In some embodiments, the peptide or polypeptide is a chimeric molecule. In some embodiments, the peptide or polypeptide is a fusion molecule. In some embodiments, the peptide or polypeptide therapeutic agent of the composition is a naturally occurring peptide or polypeptide. In some
15 embodiments, the peptide or polypeptide therapeutic agent of the composition is a modified version of a naturally occurring peptide or polypeptide (e.g., contains less than 3, less than 5, less than 10, less than 15, less than 20, or less than 25 amino substitutions, deletions, or additions compared to its wild type, naturally occurring peptide or polypeptide counterpart).

[00178] In some embodiments, in the loaded LNP of the disclosure, the one or more therapeutic and/or prophylactic agents is a polynucleotide or a polypeptide.

Other components

[00179] A lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or
20 more components in addition to those described in the preceding sections. For example, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or more small hydrophobic molecules such as a vitamin (e.g., vitamin A or vitamin E) or a sterol.

[00180] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may also include one or
25 more permeability enhancer molecules, carbohydrates, polymers, surface altering agents, or other components. Carbohydrates may include simple sugars (e.g., glucose) and polysaccharides (e.g., glycogen and derivatives and analogs thereof).

[00181] A polymer may be included in and/or used to encapsulate or partially encapsulate
30 a nanoparticle composition. A polymer may be biodegradable and/or biocompatible. A polymer may be selected from, but is not limited to, polyamines, polyethers, polyamides, polyesters, polycarbamates, polyureas, polycarbonates, polystyrenes, polyimides, polysulfones, polyurethanes, polyacetylenes, polyethylenes, polyethyleneimines,

polyisocyanates, polyacrylates, polymethacrylates, polyacrylonitriles, and polyarylates. For example, a polymer may include poly(caprolactone) (PCL), ethylene vinyl acetate polymer (EVA), poly(lactic acid) (PLA), poly(L-lactic acid) (PLLA), poly(glycolic acid) (PGA), poly(lactic acid-co-glycolic acid) (PLGA), poly(L-lactic acid-co-glycolic acid) (PLLGA),

5 poly(D,L-lactide) (PDLA), poly(L-lactide) (PLLA), poly(D,L-lactide-co-caprolactone), poly(D,L-lactide-co-caprolactone-co-glycolide), poly(D,L-lactide-co-PEO-co-D,L-lactide), poly(D,L-lactide-co-PPO-co-D,L-lactide), polyalkyl cyanoacrylate, polyurethane, poly-L-lysine (PLL), hydroxypropyl methacrylate (HPMA), polyethyleneglycol, poly-L-glutamic acid, poly(hydroxy acids), polyanhydrides, polyorthoesters, poly(ester amides), polyamides,

10 poly(ester ethers), polycarbonates, polyalkylenes such as polyethylene and polypropylene, polyalkylene glycols such as poly(ethylene glycol) (PEG), polyalkylene oxides (PEO), polyalkylene terephthalates such as poly(ethylene terephthalate), polyvinyl alcohols (PVA), polyvinyl ethers, polyvinyl esters such as poly(vinyl acetate), polyvinyl halides such as poly(vinyl chloride) (PVC), polyvinylpyrrolidone (PVP), polysiloxanes, polystyrene (PS),

15 polyurethanes, derivatized celluloses such as alkyl celluloses, hydroxyalkyl celluloses, cellulose ethers, cellulose esters, nitro celluloses, hydroxypropylcellulose, carboxymethylcellulose, polymers of acrylic acids, such as poly(methyl(meth)acrylate) (PMMA), poly(ethyl(meth)acrylate), poly(butyl(meth)acrylate), poly(isobutyl(meth)acrylate), poly(hexyl(meth)acrylate), poly(isodecyl(meth)acrylate), poly(lauryl(meth)acrylate),

20 poly(phenyl(meth)acrylate), poly(methyl acrylate), poly(isopropyl acrylate), poly(isobutyl acrylate), poly(octadecyl acrylate) and copolymers and mixtures thereof, polydioxanone and its copolymers, polyhydroxyalkanoates, polypropylene fumarate, polyoxymethylene, poloxamers, polyoxamines, poly(ortho)esters, poly(butyric acid), poly(valeric acid), poly(lactide-co-caprolactone), trimethylene carbonate, poly(*N*-acryloylmorpholine) (PAcM),

25 poly(2-methyl-2-oxazoline) (PMOX), poly(2-ethyl-2-oxazoline) (PEOZ), and polyglycerol.

[00182] Surface altering agents may include, but are not limited to, anionic proteins (*e.g.*, bovine serum albumin), surfactants (*e.g.*, cationic surfactants such as dimethyldioctadecyl-ammonium bromide), sugars or sugar derivatives (*e.g.*, cyclodextrin), nucleic acids, polymers (*e.g.*, heparin, polyethylene glycol, and poloxamer), mucolytic agents (*e.g.*, acetylcysteine,

30 mugwort, bromelain, papain, clerodendrum, bromhexine, carbocysteine, eprazinone, mesna, ambroxol, sobrerol, domiodol, letosteine, streptonin, tiopronin, gelsolin, thymosin β 4, dornase alfa, neltenequine, and erdosteine), and DNases (*e.g.*, rhDNase). A surface altering agent may

be disposed within a nanoparticle and/or on the surface of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) (e.g., by coating, adsorption, covalent linkage, or other process).

[00183] A lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may also comprise one or more functionalized lipids. For example, a lipid may be functionalized with an alkyne group that, when exposed to an azide under appropriate reaction conditions, may undergo a cycloaddition reaction. In particular, a lipid bilayer may be functionalized in this fashion with one or more groups useful in facilitating membrane permeation, cellular recognition, or imaging. The surface of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may also be conjugated with one or more useful antibodies. Functional groups and conjugates useful in targeted cell delivery, imaging, and membrane permeation are well known in the art.

[00184] In addition to these components, lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may include any substance useful in pharmaceutical compositions. For example, the lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may include one or more pharmaceutically acceptable excipients or accessory ingredients such as, but not limited to, one or more solvents, dispersion media, diluents, dispersion aids, suspension aids, granulating aids, disintegrants, fillers, glidants, liquid vehicles, binders, surface active agents, isotonic agents, thickening or emulsifying agents, buffering agents, lubricating agents, oils, preservatives, and other species. Excipients such as waxes, butters, coloring agents, coating agents, flavorings, and perfuming agents may also be included.

[00185] Examples of diluents may include, but are not limited to, calcium carbonate, sodium carbonate, calcium phosphate, dicalcium phosphate, calcium sulfate, calcium hydrogen phosphate, sodium phosphate lactose, sucrose, cellulose, microcrystalline cellulose, kaolin, mannitol, sorbitol, inositol, sodium chloride, dry starch, cornstarch, powdered sugar, and/or combinations thereof. Granulating and dispersing agents may be selected from the non-limiting list consisting of potato starch, corn starch, tapioca starch, sodium starch glycolate, clays, alginic acid, guar gum, citrus pulp, agar, bentonite, cellulose and wood products, natural sponge, cation-exchange resins, calcium carbonate, silicates, sodium carbonate, cross-linked poly(vinyl-pyrrolidone) (crospovidone), sodium carboxymethyl starch (sodium starch glycolate), carboxymethyl cellulose, cross-linked sodium carboxymethyl cellulose (croscarmellose), methylcellulose, pregelatinized starch (starch 1500), microcrystalline starch, water insoluble starch, calcium carboxymethyl cellulose,

magnesium aluminum silicate (VEEGUM®), sodium lauryl sulfate, quaternary ammonium compounds, and/or combinations thereof.

- [00186]** Surface active agents and/or emulsifiers may include, but are not limited to, natural emulsifiers (*e.g.* acacia, agar, alginic acid, sodium alginate, tragacanth, chondrux, cholesterol, xanthan, pectin, gelatin, egg yolk, casein, wool fat, cholesterol, wax, and lecithin), colloidal clays (*e.g.* bentonite [aluminum silicate] and VEEGUM® [magnesium aluminum silicate]), long chain amino acid derivatives, high molecular weight alcohols (*e.g.* stearyl alcohol, cetyl alcohol, oleyl alcohol, triacetin monostearate, ethylene glycol distearate, glyceryl monostearate, and propylene glycol monostearate, polyvinyl alcohol), carbomers (*e.g.* carboxy polymethylene, polyacrylic acid, acrylic acid polymer, and carboxyvinyl polymer), carrageenan, cellulosic derivatives (*e.g.* carboxymethylcellulose sodium, powdered cellulose, hydroxymethyl cellulose, hydroxypropyl cellulose, hydroxypropyl methylcellulose, methylcellulose), sorbitan fatty acid esters (*e.g.* polyoxyethylene sorbitan monolaurate [TWEEN®20], polyoxyethylene sorbitan [TWEEN® 60], polyoxyethylene sorbitan monooleate [TWEEN®80], sorbitan monopalmitate [SPAN®40], sorbitan monostearate [SPAN®60], sorbitan tristearate [SPAN®65], glyceryl monooleate, sorbitan monooleate [SPAN®80]), polyoxyethylene esters (*e.g.* polyoxyethylene monostearate [MYRJ® 45], polyoxyethylene hydrogenated castor oil, polyethoxylated castor oil, polyoxymethylene stearate, and SOLUTOL®), sucrose fatty acid esters, polyethylene glycol fatty acid esters (*e.g.* CREMOPHOR®), polyoxyethylene ethers, (*e.g.* polyoxyethylene lauryl ether [BRIJ® 30]), poly(vinyl-pyrrolidone), diethylene glycol monolaurate, triethanolamine oleate, sodium oleate, potassium oleate, ethyl oleate, oleic acid, ethyl laurate, sodium lauryl sulfate, PLURONIC®F 68, POLOXAMER® 188, cetrimonium bromide, cetylpyridinium chloride, benzalkonium chloride, docusate sodium, and/or combinations thereof.
- [00187]** A binding agent may be starch (*e.g.* cornstarch and starch paste); gelatin; sugars (*e.g.* sucrose, glucose, dextrose, dextrin, molasses, lactose, lactitol, mannitol); natural and synthetic gums (*e.g.*, acacia, sodium alginate, extract of Irish moss, panwar gum, ghatti gum, mucilage of isapol husks, carboxymethylcellulose, methylcellulose, ethylcellulose, hydroxyethylcellulose, hydroxypropyl cellulose, hydroxypropyl methylcellulose, microcrystalline cellulose, cellulose acetate, poly(vinyl-pyrrolidone), magnesium aluminum silicate (VEEGUM®), and larch arabogalactan); alginates; polyethylene oxide; polyethylene

glycol; inorganic calcium salts; silicic acid; polymethacrylates; waxes; water; alcohol; and combinations thereof, or any other suitable binding agent.

- [00188]** Examples of preservatives may include, but are not limited to, antioxidants, chelating agents, antimicrobial preservatives, antifungal preservatives, alcohol preservatives, acidic preservatives, and/or other preservatives. Examples of antioxidants include, but are not limited to, alpha tocopherol, ascorbic acid, acorbyl palmitate, butylated hydroxyanisole, butylated hydroxytoluene, monothioglycerol, potassium metabisulfite, propionic acid, propyl gallate, sodium ascorbate, sodium bisulfite, sodium metabisulfite, and/or sodium sulfite. Examples of chelating agents include ethylenediaminetetraacetic acid (EDTA), citric acid monohydrate, disodium edetate, dipotassium edetate, edetic acid, fumaric acid, malic acid, phosphoric acid, sodium edetate, tartaric acid, and/or trisodium edetate. Examples of antimicrobial preservatives include, but are not limited to, benzalkonium chloride, benzethonium chloride, benzyl alcohol, bronopol, cetrimide, cetylpyridinium chloride, chlorhexidine, chlorobutanol, chlorocresol, chloroxylenol, cresol, ethyl alcohol, glycerin, hexetidine, imidurea, phenol, phenoxyethanol, phenylethyl alcohol, phenylmercuric nitrate, propylene glycol, and/or thimerosal. Examples of antifungal preservatives include, but are not limited to, butyl paraben, methyl paraben, ethyl paraben, propyl paraben, benzoic acid, hydroxybenzoic acid, potassium benzoate, potassium sorbate, sodium benzoate, sodium propionate, and/or sorbic acid. Examples of alcohol preservatives include, but are not limited to, ethanol, polyethylene glycol, benzyl alcohol, phenol, phenolic compounds, bisphenol, chlorobutanol, hydroxybenzoate, and/or phenylethyl alcohol. Examples of acidic preservatives include, but are not limited to, vitamin A, vitamin C, vitamin E, beta-carotene, citric acid, acetic acid, dehydroascorbic acid, ascorbic acid, sorbic acid, and/or phytic acid. Other preservatives include, but are not limited to, tocopherol, tocopherol acetate, deteroxime mesylate, cetrimide, butylated hydroxyanisole (BHA), butylated hydroxytoluene (BHT), ethylenediamine, sodium lauryl sulfate (SLS), sodium lauryl ether sulfate (SLES), sodium bisulfite, sodium metabisulfite, potassium sulfite, potassium metabisulfite, GLYDANT PLUS®, PHENONIP®, methylparaben, GERMALL® 115, GERMABEN®II, NEOLONE™, KATHON™, and/or EUXYL®.
- [00189]** Examples of buffering agents include, but are not limited to, citrate buffer solutions, acetate buffer solutions, phosphate buffer solutions, ammonium chloride, calcium carbonate, calcium chloride, calcium citrate, calcium gluconate, calcium gluceptate, calcium

gluconate, d-gluconic acid, calcium glycerophosphate, calcium lactate, calcium lactobionate, propanoic acid, calcium levulinate, pentanoic acid, dibasic calcium phosphate, phosphoric acid, tribasic calcium phosphate, calcium hydroxide phosphate, potassium acetate, potassium chloride, potassium gluconate, potassium mixtures, dibasic potassium phosphate, monobasic potassium phosphate, potassium phosphate mixtures, sodium acetate, sodium bicarbonate, sodium chloride, sodium citrate, sodium lactate, dibasic sodium phosphate, monobasic sodium phosphate, sodium phosphate mixtures, tromethamine, amino-sulfonate buffers (e.g., HEPES), magnesium hydroxide, aluminum hydroxide, alginic acid, pyrogen-free water, isotonic saline, Ringer's solution, ethyl alcohol, and/or combinations thereof. Lubricating agents may selected from the non-limiting group consisting of magnesium stearate, calcium stearate, stearic acid, silica, talc, malt, glyceryl behenate, hydrogenated vegetable oils, polyethylene glycol, sodium benzoate, sodium acetate, sodium chloride, leucine, magnesium lauryl sulfate, sodium lauryl sulfate, and combinations thereof.

[00190] Examples of oils include, but are not limited to, almond, apricot kernel, avocado, babassu, bergamot, black current seed, borage, cade, camomile, canola, caraway, carnauba, castor, cinnamon, cocoa butter, coconut, cod liver, coffee, corn, cotton seed, emu, eucalyptus, evening primrose, fish, flaxseed, geraniol, gourd, grape seed, hazel nut, hyssop, isopropyl myristate, jojoba, kukui nut, lavandin, lavender, lemon, litsea cubeba, macademia nut, mallow, mango seed, meadowfoam seed, mink, nutmeg, olive, orange, orange roughy, palm, palm kernel, peach kernel, peanut, poppy seed, pumpkin seed, rapeseed, rice bran, rosemary, safflower, sandalwood, sasquana, savoury, sea buckthorn, sesame, shea butter, silicone, soybean, sunflower, tea tree, thistle, tsubaki, vetiver, walnut, and wheat germ oils as well as butyl stearate, caprylic triglyceride, capric triglyceride, cyclomethicone, diethyl sebacate, dimethicone 360, simethicone, isopropyl myristate, mineral oil, octyldodecanol, oleyl alcohol, silicone oil, and/or combinations thereof.

Formulations

[00191] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may include a lipid component and one or more additional components, such as a therapeutic and/or prophylactic. A lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be designed for one or more specific applications or targets. The elements of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be selected based on a particular application or target, and/or based on the efficacy, toxicity, expense, ease of use, availability, or other feature of

one or more elements. Similarly, the particular formulation of a nanoparticle composition may be selected for a particular application or target according to, for example, the efficacy and toxicity of particular combinations of elements.

[00192] The lipid component of a nanoparticle composition may include, for example, a lipid according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid (such as an unsaturated lipid, *e.g.*, DOPE or DSPC), a PEG lipid, and a structural lipid. The elements of the lipid component may be provided in specific fractions.

[00193] In some embodiments, the lipid component of a nanoparticle composition includes a lipid according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a PEG lipid, and a structural lipid. In certain embodiments, the lipid component of the nanoparticle composition includes about 30 mol % to about 60 mol % compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), about 0 mol % to about 30 mol % phospholipid, about 18.5 mol % to about 48.5 mol % structural lipid, and about 0 mol % to about 10 mol % of PEG lipid, provided that the total mol % does not exceed 100%. In some embodiments, the lipid component of the nanoparticle composition includes about 35 mol % to about 55 mol % compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), about 5 mol % to about 25 mol % phospholipid, about 30 mol % to about 40 mol % structural lipid, and about 0 mol % to about 10 mol % of PEG lipid. In a particular embodiment, the lipid component includes about 50 mol % said compound, about 10 mol % phospholipid, about 38.5 mol % structural lipid, and about 1.5 mol % of PEG lipid. In another particular embodiment, the lipid component includes about 40 mol % said compound, about 20 mol % phospholipid, about 38.5 mol % structural lipid, and about 1.5 mol % of PEG lipid. In some embodiments, the phospholipid may be DOPE or DSPC. In other embodiments, the PEG lipid may be PEG-1, or PEG_{2k}-DMG and/or the structural lipid may be cholesterol.

[00194] In some embodiments an empty lipid nanoparticle (empty LNP) comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid.

[00195] In some embodiments a loaded lipid nanoparticle (loaded LNP) comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and one or more therapeutic and/or prophylactic agents.

- 5 **[00196]** In some embodiments, the empty LNP or loaded LNP comprises the compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), in an amount from about 40% to about 60%.

- [00197]** In some embodiments, the empty LNP or loaded LNP comprises the phospholipid in an amount from about 0% to about 20%. For example, in some embodiments, the empty
10 LNP or loaded LNP comprises DSPC in an amount from about 0% to about 20%.

[00198] In some embodiments, the empty LNP or loaded LNP comprises the structural lipid in an amount from about 30% to about 50%. For example, in some embodiments, the empty LNP or loaded LNP comprises cholesterol in an amount from about 30% to about 50%.

- 15 **[00199]** In some embodiments, the empty LNP or loaded LNP comprises the PEG lipid in an amount from about 0% to about 5%. For example, in some embodiments, the empty LNP or loaded LNP comprises PEG-1 or PEG_{2k}-DMG in an amount from about 0% to about 5%.

- [00200]** In some embodiments, the empty LNP or loaded LNP comprises about 40 mol % to about 60 mol % of the compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), about 0 mol % to about
20 20 mol % phospholipid, about 30 mol % to about 50 mol % structural lipid, and about 0 mol % to about 5 mol % PEG lipid.

- [00201]** In some embodiments, the empty LNP or loaded LNP comprises about 40 mol % to about 60 mol % of the compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), about 0 mol % to about
25 20 mol % DSPC, about 30 mol % to about 50 mol % cholesterol, and about 0 mol % to about 5 mol % PEG_{2k}-DMG. In some embodiments, the empty LNP or loaded LNP comprises about 40 mol % to about 60 mol % of the compound of Table 1, about 0 mol % to about 20 mol % DSPC, about 30 mol % to about 50 mol % cholesterol, and about 0 mol % to about 5
30 mol % PEG_{2k}-DMG.

[00202] In some embodiments, the empty LNP or loaded LNP comprises about 40 mol % to about 60 mol % of the compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-

Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), about 0 mol % to about 20 mol % DSPC, about 30 mol % to about 50 mol % cholesterol, and about 0 mol % to about 5 mol % PEG-1. In some embodiments, the empty LNP or loaded LNP comprises about 40 mol % to about 60 mol % of the compound of Table 1, about 0 mol % to about 20 mol %

5 DSPC, about 30 mol % to about 50 mol % cholesterol, and about 0 mol % to about 5 mol % PEG-1.

[00203] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the
10 phospholipid is DSPC and the structural lipid is cholesterol. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the structural lipid is cholesterol.

[00204] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie),
15 (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG_{2k}-DMG. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG_{2k}-DMG.

[00205] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the
20 structural lipid is cholesterol and the PEG lipid is PEG-1. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1 a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG-1.

[00206] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the
phospholipid is DSPC and the PEG lipid is PEG_{2k}-DMG. In some embodiments, the empty
30 LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG_{2k}-DMG.

[00207] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG-1. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG-1.

[00208] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG_{2k}-DMG. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG_{2k}-DMG.

[00209] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG_{2k}-DMG. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG_{2k}-DMG.

[00210] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG-1.

[00211] In some embodiments, the empty LNP or loaded LNP comprises a compound of Formula (A), a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG-1. In some embodiments, the empty LNP or loaded LNP comprises a compound of Table 1, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG-1.

[00212] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be designed for one or more specific applications or targets. For example, a nanoparticle composition may be designed to deliver a therapeutic and/or prophylactic such as an RNA to a particular cell,

tissue, organ, or system or group thereof in a mammal's body. Physiochemical properties of lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be altered in order to increase selectivity for particular bodily targets. For instance, particle sizes may be adjusted based on the fenestration sizes of different organs. The therapeutic and/or prophylactic included in a nanoparticle composition may also be selected based on the desired delivery target or targets. For example, a therapeutic and/or prophylactic may be selected for a particular indication, condition, disease, or disorder and/or for delivery to a particular cell, tissue, organ, or system or group thereof (e.g., localized or specific delivery). In certain embodiments, a nanoparticle composition may include an mRNA encoding a polypeptide of interest capable of being translated within a cell to produce the polypeptide of interest. Such a composition may be designed to be specifically delivered to a particular organ. In some embodiments, a composition may be designed to be specifically delivered to a mammalian liver.

[00213] The amount of a therapeutic and/or prophylactic in a nanoparticle composition may depend on the size, composition, desired target and/or application, or other properties of the nanoparticle composition as well as on the properties of the therapeutic and/or prophylactic. For example, the amount of an RNA useful in a nanoparticle composition may depend on the size, sequence, and other characteristics of the RNA. The relative amounts of a therapeutic and/or prophylactic and other elements (e.g., lipids) in a nanoparticle composition may also vary. In some embodiments, the wt/wt ratio of the lipid component to a therapeutic and/or prophylactic in a nanoparticle composition may be from about 5:1 to about 60:1, such as 5:1, 6:1, 7:1, 8:1, 9:1, 10:1, 11:1, 12:1, 13:1, 14:1, 15:1, 16:1, 17:1, 18:1, 19:1, 20:1, 25:1, 30:1, 35:1, 40:1, 45:1, 50:1, and 60:1. For example, the wt/wt ratio of the lipid component to a therapeutic and/or prophylactic may be from about 10:1 to about 40:1. In certain embodiments, the wt/wt ratio is about 20:1.

[00214] The amount of a therapeutic and/or prophylactic in a nanoparticle composition may, for example, be measured using absorption spectroscopy (e.g., ultraviolet-visible spectroscopy).

[00215] In some embodiments, a nanoparticle composition includes one or more RNAs, and the one or more RNAs, lipids, and amounts thereof may be selected to provide a specific N:P ratio. The N:P ratio of the composition refers to the molar ratio of nitrogen atoms in one or more lipids to the number of phosphate groups in an RNA. In general, a lower N:P ratio is preferred. The one or more RNA, lipids, and amounts thereof may be selected to provide an

N:P ratio from about 2:1 to about 30:1, such as 2:1, 3:1, 4:1, 5:1, 6:1, 7:1, 8:1, 9:1, 10:1, 12:1, 14:1, 16:1, 18:1, 20:1, 22:1, 24:1, 26:1, 28:1, or 30:1. In certain embodiments, the N:P ratio may be from about 2:1 to about 8:1. In other embodiments, the N:P ratio is from about 5:1 to about 8:1. For example, the N:P ratio may be about 5.0:1, about 5.5:1, about 5.67:1, about 5.60:1, about 6.5:1, or about 7.0:1. For example, the N:P ratio may be about 5.67:1.

Physical properties

[00216] The characteristics of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may depend on the components thereof. For example, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including cholesterol as a structural lipid may have different characteristics than a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) that includes a different structural lipid. Similarly, the characteristics of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may depend on the absolute or relative amounts of its components. For instance, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including a higher molar fraction of a phospholipid may have different characteristics than a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including a lower molar fraction of a phospholipid. Characteristics may also vary depending on the method and conditions of preparation of the nanoparticle composition.

[00217] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be characterized by a variety of methods. For example, microscopy (e.g., transmission electron microscopy or scanning electron microscopy) may be used to examine the morphology and size distribution of a nanoparticle composition. Dynamic light scattering or potentiometry (e.g., potentiometric titrations) may be used to measure zeta potentials. Dynamic light scattering may also be utilized to determine particle sizes. Instruments such as the Zetasizer Nano ZS (Malvern Instruments Ltd, Malvern, Worcestershire, UK) may also be used to measure multiple characteristics of a nanoparticle composition, such as particle size, polydispersity index, and zeta potential.

[00218] The mean size of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be between 10s of nm and 100s of nm, e.g., measured by dynamic light scattering (DLS). For example, the mean size may be from about 40 nm to about 150 nm, such as about 40 nm, 45 nm, 50 nm, 55 nm, 60 nm, 65 nm, 70 nm, 75 nm, 80 nm, 85 nm, 90 nm, 95 nm, 100 nm, 105 nm, 110 nm, 115 nm, 120 nm, 125 nm, 130 nm, 135 nm, 140 nm, 145 nm, or 150 nm. In some embodiments, the mean size of a lipid nanoparticle (e.g., an empty LNP or a loaded

LNP) may be from about 50 nm to about 100 nm, from about 50 nm to about 90 nm, from about 50 nm to about 80 nm, from about 50 nm to about 70 nm, from about 50 nm to about 60 nm, from about 60 nm to about 100 nm, from about 60 nm to about 90 nm, from about 60 nm to about 80 nm, from about 60 nm to about 70 nm, from about 70 nm to about 150 nm, from about 70 nm to about 130 nm, from about 70 nm to about 100 nm, from about 70 nm to about 90 nm, from about 70 nm to about 80 nm, from about 80 nm to about 150 nm, from about 80 nm to about 130 nm, from about 80 nm to about 100 nm, from about 80 nm to about 90 nm, from about 90 nm to about 150 nm, from about 90 nm to about 130 nm, or from about 90 nm to about 100 nm. In certain embodiments, the mean size of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may from about 70 nm to about 130 nm or be from about 70 nm to about 100 nm. In a particular embodiment, the mean size may be about 80 nm. In other embodiments, the mean size may be about 100 nm. In other embodiments, the mean size may be about 120 nm.

[00219] A lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be relatively homogenous. A polydispersity index may be used to indicate the homogeneity of a nanoparticle composition, e.g., the particle size distribution of the lipid nanoparticles (e.g., empty LNPs or loaded LNPs). A small (e.g., less than 0.3) polydispersity index generally indicates a narrow particle size distribution. A lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may have a polydispersity index from about 0 to about 0.25, such as 0.01, 0.02, 0.03, 0.04, 0.05, 0.06, 0.07, 0.08, 0.09, 0.10, 0.11, 0.12, 0.13, 0.14, 0.15, 0.16, 0.17, 0.18, 0.19, 0.20, 0.21, 0.22, 0.23, 0.24, or 0.25. In some embodiments, the polydispersity index of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be from about 0.10 to about 0.20.

[00220] The zeta potential of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be used to indicate the electrokinetic potential of the composition. For example, the zeta potential may describe the surface charge of a nanoparticle composition. Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) with relatively low charges, positive or negative, are generally desirable, as more highly charged species may interact undesirably with cells, tissues, and other elements in the body. In some embodiments, the zeta potential of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may be from about -10 mV to about +20 mV, from about -10 mV to about +15 mV, from about -10 mV to about +10 mV, from about -10 mV to about +5 mV, from about -10 mV to about 0 mV, from about -10 mV to about -5

mV, from about -5 mV to about +20 mV, from about -5 mV to about +15 mV, from about -5 mV to about +10 mV, from about -5 mV to about +5 mV, from about -5 mV to about 0 mV, from about 0 mV to about +20 mV, from about 0 mV to about +15 mV, from about 0 mV to about +10 mV, from about 0 mV to about +5 mV, from about +5 mV to about +20 mV, from about +5 mV to about +15 mV, or from about +5 mV to about +10 mV.

- [00221] The efficiency of encapsulation of a therapeutic and/or prophylactic describes the amount of therapeutic and/or prophylactic that is encapsulated or otherwise associated with a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) after preparation, relative to the initial amount provided. The encapsulation efficiency is desirably high (e.g., close to 100%).
- 10 The encapsulation efficiency may be measured, for example, by comparing the amount of therapeutic and/or prophylactic in a solution containing the lipid nanoparticle (e.g., an empty LNP or a loaded LNP) before and after breaking up the lipid nanoparticle (e.g., an empty LNP or a loaded LNP) with one or more organic solvents or detergents. Fluorescence may be used to measure the amount of free therapeutic and/or prophylactic (e.g., RNA) in a solution.
- 15 For the lipid nanoparticles (e.g., empty LNPs or loaded LNPs) described herein, the encapsulation efficiency of a therapeutic and/or prophylactic may be at least 50%, for example 50%, 55%, 60%, 65%, 70%, 75%, 80%, 85%, 90%, 91%, 92%, 93%, 94%, 95%, 96%, 97%, 98%, 99%, or 100%. In some embodiments, the encapsulation efficiency may be at least 80%. In certain embodiments, the encapsulation efficiency may be at least 90%. In
- 20 some embodiments, the encapsulation efficiency of the therapeutic and/or prophylactic agent is between 80% and 100%.

Pharmaceutical compositions

- [00222] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be formulated in whole or in part as pharmaceutical compositions. Pharmaceutical compositions may include
- 25 one or more lipid nanoparticles (e.g., empty LNPs or loaded LNPs). In one embodiment, a pharmaceutical composition comprises a population of lipid nanoparticles (e.g., empty LNPs or loaded LNPs). For example, a pharmaceutical composition may include one or more lipid nanoparticles (e.g., empty LNPs or loaded LNPs) including one or more different therapeutic and/or prophylactics. Pharmaceutical compositions may further include one or more
- 30 pharmaceutically acceptable excipients or accessory ingredients such as those described herein. General guidelines for the formulation and manufacture of pharmaceutical compositions and agents are available, for example, in Remington's *The Science and Practice*

of *Pharmacy*, 21st Edition, A. R. Gennaro; Lippincott, Williams & Wilkins, Baltimore, MD, 2006. Conventional excipients and accessory ingredients may be used in any pharmaceutical composition, except insofar as any conventional excipient or accessory ingredient may be incompatible with one or more components of a nanoparticle composition. An excipient or accessory ingredient may be incompatible with a component of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) if its combination with the component may result in any undesirable biological effect or otherwise deleterious effect.

[00223] In some embodiments, one or more excipients or accessory ingredients may make up greater than 50% of the total mass or volume of a pharmaceutical composition including a nanoparticle composition. For example, the one or more excipients or accessory ingredients may make up 50%, 60%, 70%, 80%, 90%, or more of a pharmaceutical convention. In some embodiments, a pharmaceutically acceptable excipient is at least 95%, at least 96%, at least 97%, at least 98%, at least 99%, or 100% pure. In some embodiments, an excipient is approved for use in humans and for veterinary use. In some embodiments, an excipient is approved by United States Food and Drug Administration. In some embodiments, an excipient is pharmaceutical grade. In some embodiments, an excipient meets the standards of the United States Pharmacopoeia (USP), the European Pharmacopoeia (EP), the British Pharmacopoeia, and/or the International Pharmacopoeia.

[00224] Relative amounts of the one or more lipid nanoparticles (e.g., empty LNPs or loaded LNPs), the one or more pharmaceutically acceptable excipients, and/or any additional ingredients in a pharmaceutical composition in accordance with the present disclosure will vary, depending upon the identity, size, and/or condition of the subject treated and further depending upon the route by which the composition is to be administered. By way of example, a pharmaceutical composition may comprise between 0.1% and 100% (wt/wt) of one or more lipid nanoparticles (e.g., empty LNPs or loaded LNPs).

[00225] In certain embodiments, the lipid nanoparticles (e.g., empty LNPs or loaded LNPs) and/or pharmaceutical compositions of the disclosure are refrigerated or frozen for storage and/or shipment (e.g., being stored at a temperature of 4 °C or lower, such as a temperature between about -150 °C and about 0 °C or between about -80 °C and about -20 °C (e.g., about -5 °C, -10 °C, -15 °C, -20 °C, -25 °C, -30 °C, -40 °C, -50 °C, -60 °C, -70 °C, -80 °C, -90 °C, -130 °C or -150 °C). For example, the pharmaceutical composition comprising a compound of any of Formulae (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA),

(Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) is a solution that is refrigerated for storage and/or shipment at, for example, about -20 °C, -30 °C, -40 °C, -50 °C, -60 °C, -70 °C, or -80 °C. In certain embodiments, the disclosure also relates to a method of increasing stability of the lipid nanoparticles (e.g., empty LNPs or loaded LNPs) and/or pharmaceutical compositions comprising a compound of any of Formulae (1-1), (2-1), (I-a), (A), (B), (A-1), (A-2), (A-3), (IA), (IB), (B-1), (B-2), (B-3), (A-a), (A-a1), (A-a2), (A-a3), (A-b), (A-b1), (A-b2), (A-b3), (A-c), and (B-c) by storing the lipid nanoparticles (e.g., empty LNPs or loaded LNPs) and/or pharmaceutical compositions at a temperature of 4 °C or lower, such as a temperature between about -150 °C and about 0 °C or between about -80 °C and about -20 °C, e.g., about -5 °C, -10 °C, -15 °C, -20 °C, -25 °C, -30 °C, -40 °C, -50 °C, -60 °C, -70 °C, -80 °C, -90 °C, -130 °C or -150 °C). For example, the lipid nanoparticles (e.g., empty LNPs or loaded LNPs) and/or pharmaceutical compositions disclosed herein are stable for about at least 1 week, at least 2 weeks, at least 3 weeks, at least 4 weeks, at least 5 weeks, at least 6 weeks, at least 1 month, at least 2 months, at least 4 months, at least 6 months, at least 8 months, at least 10 months, at least 12 months, at least 14 months, at least 16 months, at least 18 months, at least 20 months, at least 22 months, or at least 24 months, e.g., at a temperature of 4 °C or lower (e.g., between about 4 °C and -20 °C). In some embodiments, the formulation is stabilized for at least 4 weeks at about 4 °C. In certain embodiments, the pharmaceutical composition of the disclosure comprises a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) disclosed herein and a pharmaceutically acceptable carrier selected from one or more of Tris, an acetate (e.g., sodium acetate), an citrate (e.g., sodium citrate), saline, PBS, and sucrose. In certain embodiments, the pharmaceutical composition of the disclosure has a pH value between about 7 and 8 (e.g., 6.8, 6.9, 7.0, 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8, 7.9 or 8.0, or between 7.5 and 8 or between 7 and 7.8). For example, a pharmaceutical composition of the disclosure comprises a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) disclosed herein, Tris, saline and sucrose, and has a pH of about 7.5-8, which is suitable for storage and/or shipment at, for example, about -20 °C. For example, a pharmaceutical composition of the disclosure comprises a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) disclosed herein and PBS and has a pH of about 7-7.8, suitable for storage and/or shipment at, for example, about 4 °C or lower. “Stability,” “stabilized,” and “stable” in the context of the present disclosure refers to the resistance of lipid nanoparticles

(e.g., empty LNPs or loaded LNPs) and/or pharmaceutical compositions disclosed herein to chemical or physical changes (e.g., degradation, particle size change, aggregation, change in encapsulation, etc.) under given manufacturing, preparation, transportation, storage and/or in-use conditions, e.g., when stress is applied such as shear force, freeze/thaw stress, etc.

5 **[00226]** In some embodiments, a pharmaceutical composition of the disclosure comprises a empty LNP or a loaded LNP, a cryoprotectant, a buffer, or a combination thereof.

[00227] In some embodiments, the cryoprotectant comprises one or more cryoprotective agents, and each of the one or more cryoprotective agents is independently a polyol (e.g., a diol or a triol such as propylene glycol (i.e., 1,2-propanediol), 1,3-propanediol, glycerol, (+/-)
10)-2-methyl-2,4-pentanediol, 1,6-hexanediol, 1,2-butanediol, 2,3-butanediol, ethylene glycol, or diethylene glycol), a nondetergent sulfobetaine (e.g., NDSB-201 (3-(1-pyridino)-1-propane sulfonate), an osmolyte (e.g., L-proline or trimethylamine N-oxide dihydrate), a polymer (e.g., polyethylene glycol 200 (PEG 200), PEG 400, PEG 600, PEG 1000, PEG_{2k}-DMG, PEG 3350, PEG 4000, PEG 8000, PEG 10000, PEG 20000, polyethylene glycol monomethyl ether
15 550 (mPEG 550), mPEG 600, mPEG 2000, mPEG 3350, mPEG 4000, mPEG 5000, polyvinylpyrrolidone (e.g., polyvinylpyrrolidone K 15), pentaerythritol propoxylate, or polypropylene glycol P 400), an organic solvent (e.g., dimethyl sulfoxide (DMSO) or ethanol), a sugar (e.g., D-(+)-sucrose, D-sorbitol, trehalose, D-(+)-maltose monohydrate, meso-erythritol, xylitol, myo-inositol, D-(+)-raffinose pentahydrate, D-(+)-trehalose
20 dihydrate, or D-(+)-glucose monohydrate), or a salt (e.g., lithium acetate, lithium chloride, lithium formate, lithium nitrate, lithium sulfate, magnesium acetate, sodium acetate, sodium chloride, sodium formate, sodium malonate, sodium nitrate, sodium sulfate, or any hydrate thereof), or any combination thereof. In some embodiments, the cryoprotectant comprises sucrose. In some embodiments, the cryoprotectant and/or excipient is sucrose. In some
25 embodiments, the cryoprotectant comprises sodium acetate. In some embodiments, the cryoprotectant and/or excipient is sodium acetate. In some embodiments, the cryoprotectant comprises sucrose and sodium acetate.

[00228] In some embodiments, wherein the buffer is selected from the group consisting of an acetate buffer, a citrate buffer, a phosphate buffer, a tris buffer, and combinations thereof.

30 **[00229]** Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) and/or pharmaceutical compositions including one or more lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be administered to any patient or subject, including those patients or subjects that may

- benefit from a therapeutic effect provided by the delivery of a therapeutic and/or prophylactic to one or more particular cells, tissues, organs, or systems or groups thereof. Although the descriptions provided herein of lipid nanoparticles (e.g., empty LNPs or loaded LNPs) and pharmaceutical compositions including lipid nanoparticles (e.g., empty LNPs or loaded
- 5 LNPs) are principally directed to compositions which are suitable for administration to humans, it will be understood by the skilled artisan that such compositions are generally suitable for administration to any other mammal. Modification of compositions suitable for administration to humans in order to render the compositions suitable for administration to various animals is well understood, and the ordinarily skilled veterinary pharmacologist can
- 10 design and/or perform such modification with merely ordinary, if any, experimentation. Subjects to which administration of the compositions is contemplated include, but are not limited to, humans, other primates, and other mammals, including commercially relevant mammals such as cattle, pigs, horses, sheep, cats, dogs, mice, and/or rats. The subject lipid nanoparticles can also be employed for in vitro and ex vivo uses.
- 15 **[00230]** A pharmaceutical composition including one or more lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be prepared by any method known or hereafter developed in the art of pharmacology. In general, such preparatory methods include bringing the active ingredient into association with an excipient and/or one or more other accessory ingredients, and then, if desirable or necessary, dividing, shaping, and/or packaging the product into a
- 20 desired single- or multi-dose unit.
- [00231]** A pharmaceutical composition in accordance with the present disclosure may be prepared, packaged, and/or sold in bulk, as a single unit dose, and/or as a plurality of single unit doses. As used herein, a “unit dose” is discrete amount of the pharmaceutical composition comprising a predetermined amount of the active ingredient (e.g., nanoparticle
- 25 composition). The amount of the active ingredient is generally equal to the dosage of the active ingredient which would be administered to a subject and/or a convenient fraction of such a dosage such as, for example, one-half or one-third of such a dosage.
- [00232]** Pharmaceutical compositions may be prepared in a variety of forms suitable for a variety of routes and methods of administration. For example, pharmaceutical compositions
- 30 may be prepared in liquid dosage forms (e.g., emulsions, microemulsions, nanoemulsions, solutions, suspensions, syrups, and elixirs), injectable forms, solid dosage forms (e.g., capsules, tablets, pills, powders, and granules), dosage forms for topical and/or transdermal

administration (*e.g.*, ointments, pastes, creams, lotions, gels, powders, solutions, sprays, inhalants, and patches), suspensions, powders, and other forms.

[00233] Liquid dosage forms for oral and parenteral administration include, but are not limited to, pharmaceutically acceptable emulsions, microemulsions, nanoemulsions, solutions, suspensions, syrups, and/or elixirs. In addition to active ingredients, liquid dosage forms may comprise inert diluents commonly used in the art such as, for example, water or other solvents, solubilizing agents and emulsifiers such as ethyl alcohol, isopropyl alcohol, ethyl carbonate, ethyl acetate, benzyl alcohol, benzyl benzoate, propylene glycol, 1,3-butylene glycol, dimethylformamide, oils (in particular, cottonseed, groundnut, corn, germ, olive, castor, and sesame oils), glycerol, tetrahydrofurfuryl alcohol, polyethylene glycols and fatty acid esters of sorbitan, and mixtures thereof. Besides inert diluents, oral compositions can include additional therapeutic and/or prophylactics, additional agents such as wetting agents, emulsifying and suspending agents, sweetening, flavoring, and/or perfuming agents. In certain embodiments for parenteral administration, compositions are mixed with solubilizing agents such as Cremophor[®], alcohols, oils, modified oils, glycols, polysorbates, cyclodextrins, polymers, and/or combinations thereof.

[00234] Injectable preparations, for example, sterile injectable aqueous or oleaginous suspensions may be formulated according to the known art using suitable dispersing agents, wetting agents, and/or suspending agents. Sterile injectable preparations may be sterile injectable solutions, suspensions, and/or emulsions in nontoxic parenterally acceptable diluents and/or solvents, for example, as a solution in 1,3-butanediol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution, U.S.P., and isotonic sodium chloride solution. Sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil can be employed including synthetic mono- or diglycerides. Fatty acids such as oleic acid can be used in the preparation of injectables.

[00235] Injectable formulations can be sterilized, for example, by filtration through a bacterial-retaining filter, and/or by incorporating sterilizing agents in the form of sterile solid compositions which can be dissolved or dispersed in sterile water or other sterile injectable medium prior to use.

[00236] In order to prolong the effect of an active ingredient, it is often desirable to slow the absorption of the active ingredient from subcutaneous or intramuscular injection. This

may be accomplished by the use of a liquid suspension of crystalline or amorphous material with poor water solubility. The rate of absorption of the drug then depends upon its rate of dissolution which, in turn, may depend upon crystal size and crystalline form. Alternatively, delayed absorption of a parenterally administered drug form is accomplished by dissolving or
5 suspending the drug in an oil vehicle. Injectable depot forms are made by forming microencapsulated matrices of the drug in biodegradable polymers such as polylactide-polyglycolide. Depending upon the ratio of drug to polymer and the nature of the particular polymer employed, the rate of drug release can be controlled. Examples of other biodegradable polymers include poly(orthoesters) and poly(anhydrides). Depot injectable
10 formulations are prepared by entrapping the drug in liposomes or microemulsions which are compatible with body tissues.

[00237] Compositions for rectal or vaginal administration are typically suppositories which can be prepared by mixing compositions with suitable non-irritating excipients such as cocoa butter, polyethylene glycol or a suppository wax which are solid at ambient
15 temperature but liquid at body temperature and therefore melt in the rectum or vaginal cavity and release the active ingredient.

[00238] Solid dosage forms for oral administration include capsules, tablets, pills, films, powders, and granules. In such solid dosage forms, an active ingredient is mixed with at least one inert, pharmaceutically acceptable excipient such as sodium citrate or dicalcium
20 phosphate and/or fillers or extenders (*e.g.* starches, lactose, sucrose, glucose, mannitol, and silicic acid), binders (*e.g.*, carboxymethylcellulose, alginates, gelatin, polyvinylpyrrolidone, sucrose, and acacia), humectants (*e.g.*, glycerol), disintegrating agents (*e.g.*, agar, calcium carbonate, potato or tapioca starch, alginic acid, certain silicates, and sodium carbonate), solution retarding agents (*e.g.*, paraffin), absorption accelerators (*e.g.*, quaternary ammonium
25 compounds), wetting agents (*e.g.*, cetyl alcohol and glycerol monostearate), absorbents (*e.g.*, kaolin and bentonite clay, silicates), and lubricants (*e.g.*, talc, calcium stearate, magnesium stearate, solid polyethylene glycols, sodium lauryl sulfate), and mixtures thereof. In the case of capsules, tablets and pills, the dosage form may comprise buffering agents.

[00239] Solid compositions of a similar type may be employed as fillers in soft and hard-
30 filled gelatin capsules using such excipients as lactose or milk sugar as well as high molecular weight polyethylene glycols and the like. Solid dosage forms of tablets, dragees, capsules, pills, and granules can be prepared with coatings and shells such as enteric coatings

and other coatings well known in the pharmaceutical formulating art. They may optionally comprise opacifying agents and can be of a composition that they release the active ingredient(s) only, or preferentially, in a certain part of the intestinal tract, optionally, in a delayed manner. Examples of embedding compositions which can be used include polymeric substances and waxes. Solid compositions of a similar type may be employed as fillers in soft and hard-filled gelatin capsules using such excipients as lactose or milk sugar as well as high molecular weight polyethylene glycols and the like.

5 [00240] Dosage forms for topical and/or transdermal administration of a composition may include ointments, pastes, creams, lotions, gels, powders, solutions, sprays, inhalants, and/or patches. Generally, an active ingredient is admixed under sterile conditions with a pharmaceutically acceptable excipient and/or any needed preservatives and/or buffers as may be required. Additionally, the present disclosure contemplates the use of transdermal patches, which often have the added advantage of providing controlled delivery of a compound to the body. Such dosage forms may be prepared, for example, by dissolving and/or dispensing the compound in the proper medium. Alternatively or additionally, rate may be controlled by either providing a rate controlling membrane and/or by dispersing the compound in a polymer matrix and/or gel.

10 [00241] Suitable devices for use in delivering intradermal pharmaceutical compositions described herein include short needle devices. Intradermal compositions may be administered by devices which limit the effective penetration length of a needle into the skin. Jet injection devices which deliver liquid compositions to the dermis via a liquid jet injector and/or via a needle which pierces the stratum corneum and produces a jet which reaches the dermis are suitable. Ballistic powder/particle delivery devices which use compressed gas to accelerate vaccine in powder form through the outer layers of the skin to the dermis are suitable. Alternatively or additionally, conventional syringes may be used in the classical mantoux method of intradermal administration.

25 [00242] Formulations suitable for topical administration include, but are not limited to, liquid and/or semi liquid preparations such as liniments, lotions, oil in water and/or water in oil emulsions such as creams, ointments and/or pastes, and/or solutions and/or suspensions. Topically-administrable formulations may, for example, comprise from about 1% to about 30 10% (wt/wt) active ingredient, although the concentration of active ingredient may be as high as the solubility limit of the active ingredient in the solvent. Formulations for topical

administration may further comprise one or more of the additional ingredients described herein.

[00243] A pharmaceutical composition may be prepared, packaged, and/or sold in a formulation suitable for pulmonary administration via the buccal cavity. Such a formulation
5 may comprise dry particles which comprise the active ingredient. Such compositions are conveniently in the form of dry powders for administration using a device comprising a dry powder reservoir to which a stream of propellant may be directed to disperse the powder and/or using a self-propelling solvent/powder dispensing container such as a device comprising the active ingredient dissolved and/or suspended in a low-boiling propellant in a
10 sealed container. Dry powder compositions may include a solid fine powder diluent such as sugar and are conveniently provided in a unit dose form.

[00244] Low boiling propellants generally include liquid propellants having a boiling point of below 65 °F at atmospheric pressure. Generally the propellant may constitute 50% to 99.9% (wt/wt) of the composition, and active ingredient may constitute 0.1% to 20% (wt/wt)
15 of the composition. A propellant may further comprise additional ingredients such as a liquid non-ionic and/or solid anionic surfactant and/or a solid diluent (which may have a particle size of the same order as particles comprising the active ingredient).

[00245] Pharmaceutical compositions formulated for pulmonary delivery may provide an active ingredient in the form of droplets of a solution and/or suspension. Such formulations
20 may be prepared, packaged, and/or sold as aqueous and/or dilute alcoholic solutions and/or suspensions, optionally sterile, comprising active ingredient, and may conveniently be administered using any nebulization and/or atomization device. Such formulations may further comprise one or more additional ingredients including, but not limited to, a flavoring agent such as saccharin sodium, a volatile oil, a buffering agent, a surface active agent, and/or
25 a preservative such as methylhydroxybenzoate. Droplets provided by this route of administration may have an average diameter in the range from about 1 nm to about 200 nm.

[00246] Formulations described herein as being useful for pulmonary delivery are useful for intranasal delivery of a pharmaceutical composition. Another formulation suitable for intranasal administration is a coarse powder comprising the active ingredient and having an
30 average particle from about 0.2 μm to 500 μm . Such a formulation is administered in the manner in which snuff is taken, i.e. by rapid inhalation through the nasal passage from a container of the powder held close to the nose.

[00247] Formulations suitable for nasal administration may, for example, comprise from about as little as 0.1% (wt/wt) and as much as 100% (wt/wt) of active ingredient, and may comprise one or more of the additional ingredients described herein. A pharmaceutical composition may be prepared, packaged, and/or sold in a formulation suitable for buccal administration. Such formulations may, for example, be in the form of tablets and/or lozenges made using conventional methods, and may, for example, 0.1% to 20% (wt/wt) active ingredient, the balance comprising an orally dissolvable and/or degradable composition and, optionally, one or more of the additional ingredients described herein. Alternately, formulations suitable for buccal administration may comprise a powder and/or an aerosolized and/or atomized solution and/or suspension comprising active ingredient. Such powdered, aerosolized, and/or aerosolized formulations, when dispersed, may have an average particle and/or droplet size in the range from about 0.1 nm to about 200 nm, and may further comprise one or more of any additional ingredients described herein.

[00248] A pharmaceutical composition may be prepared, packaged, and/or sold in a formulation suitable for ophthalmic administration. Such formulations may, for example, be in the form of eye drops including, for example, a 0.1/1.0% (wt/wt) solution and/or suspension of the active ingredient in an aqueous or oily liquid excipient. Such drops may further comprise buffering agents, salts, and/or one or more other of any additional ingredients described herein. Other ophthalmically-administrable formulations which are useful include those which comprise the active ingredient in microcrystalline form and/or in a liposomal preparation. Ear drops and/or eye drops are contemplated as being within the scope of this present disclosure.

mRNA Therapies

[00249] mRNA as a drug modality has the potential to deliver secreted proteins as well as intracellular proteins and transmembrane proteins. mRNA as a drug modality has the potential to deliver transmembrane and intracellular proteins, i.e., targets that standard biologics are unable to access owing to their inability to cross the cell membrane when delivered in protein form. One major challenge to making mRNA based therapies a reality is the identification of an optimal delivery vehicle. Due to its large size, chemical instability and potential immunogenicity, mRNA requires a delivery vehicle that can offer protection from endo- and exo-nucleases, as well as shield the cargo from immune sentinels. Lipid nanoparticles (LNPs) have been identified as a leading option in this regard.

[00250] Key performance criteria for a lipid nanoparticle delivery system are to maximize cellular uptake and enable efficient release of mRNA from the endosome. In one embodiment, the subject LNPs comprising the novel lipids disclosed herein, demonstrate improvements in at least one of cellular uptake and endosomal release. At the same time the

5 LNP must provide a stable drug product and be able to be dosed safely at therapeutically relevant levels. LNPs are multi-component systems which typically consist of an amino lipid, phospholipid, cholesterol, and a PEG-lipid. Each component is required for aspects of efficient delivery of the nucleic acid cargo and stability of the particle. The key component thought to drive cellular uptake, endosomal escape, and tolerability is the amino lipid.

10 Cholesterol and the PEG-lipid contribute to the stability of the drug product both *in vivo* and on the shelf, while the phospholipid provides additional fusogenicity to the LNP, thus helping to drive endosomal escape and rendering the nucleic acid bioavailable in the cytosol of cells.

[00251] Several amino lipid series have been developed for oligonucleotide delivery over the past couple of decades, including the amino lipid MC3 (DLin-MC3-DMA). MC3-based

15 LNPs have been shown to be effective in delivering mRNA. LNPs of this class are quickly opsonized by apolipoprotein E (ApoE) when delivered intravenously, which enables cellular uptake by the low density lipoprotein receptor (LDLr). However, concerns remain that MC3's long tissue half-life could contribute to unfavorable side effects hindering its use for chronic therapies. In addition, extensive literature evidence suggests that chronic dosing of

20 lipid nanoparticles can produce several toxic sides effects including complement activation-related pseudo allergy (CARPA) and liver damage. Hence, to unleash the potential of mRNA and other nucleic acid, nucleotide or peptide based therapies for humans, a class of LNPs with increased delivery efficiency along with a metabolic and toxicity profile that would enable chronic dosing in humans is needed.

25 [00252] The ability to treat a broad swath of diseases requires the flexibility to safely dose chronically at varying dose levels. Through systematic optimization of the amino lipid structure, the compounds of the disclosure were identified as compounds that balance chemical stability, improved efficiency of delivery due to improved endosomal escape, rapid *in vivo* metabolism, and a clean toxicity profile. The combination of these features provides a

30 drug candidate that can be dosed chronically without activation of the immune system. Initial rodent screens led to the identification of a lead lipid with good delivery efficiency and pharmacokinetics. The lead LNP was profiled further in non-human primate for efficiency of

delivery after single and repeat dosing. Finally, the optimized LNPs were evaluated in one-month repeat dose toxicity studies in rat and non-human primate. Without wishing to be bound by theory, the novel ionizable lipids of the instant disclosure have the improved cellular delivery, improved protein expression, and improved biodegradability properties that

5 can lead to greater than 2 fold, 5 fold, 10 fold, 15 fold, or 20 fold increase in mRNA expression in cells as compared to LNPs which lack a lipid of the invention. In another embodiment, an LNP comprising a lipid of the invention can result in specific (e.g., preferential) delivery to a certain cell type or types as compared other cell types, thereby resulting in a greater than 2 fold, 5 fold, 10 fold, 15 fold, or 20 fold increase in mRNA

10 expression in certain cells or tissues as compared to LNPs which lack a lipid of the invention. These improvements over the art allow for the safe and effective use of mRNA-based therapies in acute and chronic diseases.

Methods

[00253] In some aspects, the disclosure provides a method of delivering a therapeutic and/or prophylactic to a cell (*e.g.*, a mammalian cell). This method includes the step of

15 contacting the cell with a loaded LNP or a pharmaceutical composition of the disclosure, whereby the therapeutic and/or prophylactic is delivered to the cell. In some embodiments, the cell is in a subject and the contacting comprises administering the cell to the subject. In some embodiments, the method comprises the step of administering to the subject a lipid

20 nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and one or more therapeutic and/or prophylactic agents, whereby the therapeutic and/or prophylactic is delivered to the cell.

[00254] In some embodiments, the disclosure provides a method of delivering a

25 therapeutic and/or prophylactic to a cell within a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (*e.g.*,

30 an RNA). For example, in some embodiments, the disclosure provides a method of delivering a therapeutic and/or prophylactic to a cell within a subject, wherein the method comprises the

step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

- [00255] In some embodiments, the disclosure provides a method of delivering a therapeutic and/or prophylactic to a cell within a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of delivering a therapeutic and/or prophylactic to a cell within a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).
- [00256] In some aspects, the disclosure provides a method of delivering (e.g., specifically delivering) a therapeutic and/or prophylactic to a mammalian organ or tissue (e.g., a liver, kidney, spleen, or lung). This method includes the step of contacting the cell with a loaded LNP or a pharmaceutical composition of the disclosure, whereby the therapeutic and/or prophylactic is delivered to the target organ or tissue. In some embodiments, the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and one or more therapeutic and/or prophylactic agents, whereby the therapeutic and/or prophylactic is delivered to the target organ or tissue.
- [00257] In some embodiments, the disclosure provides a method of specifically delivering a therapeutic and/or prophylactic to an organ of a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of specifically delivering a therapeutic and/or prophylactic to an organ of a subject, wherein the

method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

- 5 **[00258]** In some embodiments, the disclosure provides a method of specifically delivering a therapeutic and/or prophylactic to an organ of a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or
- 10 prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of specifically delivering a therapeutic and/or prophylactic to an organ of a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG-1, and one or more therapeutic
- 15 and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

- [00259]** In some aspects, the disclosure features a method for the enhanced delivery of a therapeutic and/or prophylactic (e.g., an mRNA) to a target tissue (e.g., a liver, spleen, or lung). This method includes the step of contacting the cell with a loaded LNP or a
- 20 pharmaceutical composition of the disclosure, whereby the therapeutic and/or prophylactic is delivered to the target tissue (e.g., a liver, kidney, spleen, or lung). In some embodiments, the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and
- 25 one or more therapeutic and/or prophylactic agents, whereby the therapeutic and/or prophylactic is delivered to the target tissue (e.g., a liver, kidney, spleen, or lung).

- [00260]** In some embodiments, the disclosure provides a method for the enhanced delivery of a therapeutic and/or prophylactic to a target tissue, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A),
- 30 (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an

RNA). For example, in some embodiments, the disclosure provides a method for the enhanced delivery of a therapeutic and/or prophylactic to a target tissue, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

[00261] In some embodiments, the disclosure provides a method for the enhanced delivery of a therapeutic and/or prophylactic to a target tissue, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method for the enhanced delivery of a therapeutic and/or prophylactic to a target tissue, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

[00262] In some aspects, the disclosure provides a method of producing a polypeptide of interest in a cell (e.g., a mammalian cell). This method includes the step of contacting the cell with a loaded LNP or a pharmaceutical composition of the disclosure, wherein the loaded LNP or pharmaceutical composition comprises an mRNA, whereby the mRNA is capable of being translated in the cell to produce the polypeptide. In some embodiments, the cell is in a subject and the contacting comprises administering the cell to the subject. In some embodiments, the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and an mRNA, whereby the mRNA is capable of being translated in the cell to produce the polypeptide.

[00263] In some embodiments, the disclosure provides a method of producing a polypeptide of interest in a cell, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3),

(B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG_{2k}-DMG, and an mRNA. For example, in some embodiments, the disclosure provides a method of producing a polypeptide of interest in a cell, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Table 1, DSPC, cholesterol, and PEG_{2k}-DMG, and an mRNA. For example, in some embodiments, the disclosure provides a method of producing a polypeptide of interest in a cell, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG_{2k}-DMG, and an mRNA.

10 **[00264]** In some embodiments, the disclosure provides a method of producing a polypeptide of interest in a cell, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG-1, and an mRNA. For example, in some embodiments, the disclosure provides a method of producing a polypeptide of interest in a cell, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG-1, and an mRNA. For example, in some embodiments, the disclosure provides a method of producing a polypeptide of interest in a cell, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Table 1, DSPC, cholesterol, and PEG-1, and an mRNA.

[00265] In some aspects, the disclosure provides a method of treating a disease or disorder in a mammal (*e.g.*, a human) in need thereof. The method includes the step of administering to the mammal a therapeutically effective amount of loaded LNP or a pharmaceutical composition of the disclosure. In some embodiments, the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and one or more therapeutic and/or prophylactic agents, whereby the therapeutic and/or prophylactic is delivered to the cell. In some embodiments, the disease or disorder is characterized by dysfunctional or aberrant protein or polypeptide activity. For example, the disease or disorder is selected from

the group consisting of rare diseases, infectious diseases, cancer and proliferative diseases, genetic diseases, autoimmune diseases, diabetes, neurodegenerative diseases, cardio- and reno-vascular diseases, and metabolic diseases.

- [00266]** In some embodiments, the disclosure provides a method of treating a disease or disorder in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of treating a disease or disorder in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of treating a disease or disorder in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Table 1, DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).
- [00267]** In some embodiments, the disclosure provides a method of treating a disease or disorder in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of treating a disease or disorder in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of treating a disease or disorder in a subject, wherein the method comprises the step

of administering to the subject a lipid nanoparticle comprising a compound of Table 1, DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

- [00268]** In yet another aspect, the disclosure features a method of lowering
- 5 immunogenicity comprising introducing loaded LNP or a pharmaceutical composition of the disclosure into cells, wherein the loaded LNP or a pharmaceutical composition reduces the induction of the cellular immune response of the cells to the loaded LNP or a pharmaceutical composition, as compared to the induction of the cellular immune response in cells induced by a reference composition. In some embodiments, the cell is in a subject and the contacting
- 10 comprises administering the cell to the subject. In some embodiments, the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid, a structural lipid, a PEG lipid, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a
- 15 nucleic acid (e.g., an RNA), wherein the lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb) reduces the induction of the cellular immune response of the cells to the lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), as
- 20 compared to the induction of the cellular immune response in cells induced by a reference composition. For example, the cellular immune response is an innate immune response, an adaptive immune response, or both.

- [00269]** In some embodiments, the disclosure provides a method of lowering immunogenicity in a subject, wherein the method comprises the step of administering to the
- 25 subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of lowering immunogenicity in a
- 30 subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a

polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of lowering immunogenicity in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Table 1, DSPC, cholesterol, and PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

[00270] In some embodiments, the disclosure provides a method of lowering immunogenicity in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of lowering immunogenicity in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Formula (A), DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA). For example, in some embodiments, the disclosure provides a method of lowering immunogenicity in a subject, wherein the method comprises the step of administering to the subject a lipid nanoparticle comprising a compound of Table 1, DSPC, cholesterol, and PEG-1, and one or more therapeutic and/or prophylactic agents selected from a nucleotide, a polypeptide, and a nucleic acid (e.g., an RNA).

[00271] The disclosure also includes methods of synthesizing a compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), and methods of making a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including a lipid component comprising the compound of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb).

Methods of producing polypeptides in cells

[00272] The present disclosure provides methods of producing a polypeptide of interest in a mammalian cell. Methods of producing polypeptides involve contacting a cell with a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including an mRNA encoding the

polypeptide of interest. Upon contacting the cell with the nanoparticle composition, the mRNA may be taken up and translated in the cell to produce the polypeptide of interest.

[00273] In general, the step of contacting a mammalian cell with a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including an mRNA encoding a polypeptide of interest may be performed *in vivo*, *ex vivo*, in culture, or *in vitro*. The amount of lipid nanoparticle (e.g., an empty LNP or a loaded LNP) contacted with a cell, and/or the amount of mRNA therein, may depend on the type of cell or tissue being contacted, the means of administration, the physiochemical characteristics of the lipid nanoparticle (e.g., an empty LNP or a loaded LNP) and the mRNA (e.g., size, charge, and chemical composition) therein, and other factors. In general, an effective amount of the lipid nanoparticle (e.g., an empty LNP or a loaded LNP) will allow for efficient polypeptide production in the cell. Metrics for efficiency may include polypeptide translation (indicated by polypeptide expression), level of mRNA degradation, and immune response indicators.

[00274] The step of contacting a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including an mRNA with a cell may involve or cause transfection. A phospholipid including in the lipid component of a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may facilitate transfection and/or increase transfection efficiency, for example, by interacting and/or fusing with a cellular or intracellular membrane. Transfection may allow for the translation of the mRNA within the cell.

[00275] In some embodiments, the lipid nanoparticles (e.g., empty LNPs or loaded LNPs) described herein may be used therapeutically. For example, an mRNA included in a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may encode a therapeutic polypeptide (e.g., in a translatable region) and produce the therapeutic polypeptide upon contacting and/or entry (e.g., transfection) into a cell. In other embodiments, an mRNA included in a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may encode a polypeptide that may improve or increase the immunity of a subject. For example, an mRNA may encode a granulocyte-colony stimulating factor or trastuzumab.

[00276] In certain embodiments, an mRNA included in a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may encode a recombinant polypeptide that may replace one or more polypeptides that may be substantially absent in a cell contacted with the nanoparticle composition. The one or more substantially absent polypeptides may be lacking due to a genetic mutation of the encoding gene or a regulatory pathway thereof. Alternatively, a

recombinant polypeptide produced by translation of the mRNA may antagonize the activity of an endogenous protein present in, on the surface of, or secreted from the cell. An antagonistic recombinant polypeptide may be desirable to combat deleterious effects caused by activities of the endogenous protein, such as altered activities or localization caused by mutation. In another alternative, a recombinant polypeptide produced by translation of the mRNA may indirectly or directly antagonize the activity of a biological moiety present in, on the surface of, or secreted from the cell. Antagonized biological moieties may include, but are not limited to, lipids (*e.g.*, cholesterol), lipoproteins (*e.g.*, low density lipoprotein), nucleic acids, carbohydrates, and small molecule toxins. Recombinant polypeptides produced by translation of the mRNA may be engineered for localization within the cell, such as within a specific compartment such as the nucleus, or may be engineered for secretion from the cell or for translocation to the plasma membrane of the cell.

[00277] In some embodiments, contacting a cell with a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) including an mRNA may reduce the innate immune response of a cell to an exogenous nucleic acid. A cell may be contacted with a first lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) including a first amount of a first exogenous mRNA including a translatable region and the level of the innate immune response of the cell to the first exogenous mRNA may be determined. Subsequently, the cell may be contacted with a second composition including a second amount of the first exogenous mRNA, the second amount being a lesser amount of the first exogenous mRNA compared to the first amount. Alternatively, the second composition may include a first amount of a second exogenous mRNA that is different from the first exogenous mRNA. The steps of contacting the cell with the first and second compositions may be repeated one or more times. Additionally, efficiency of polypeptide production (*e.g.*, translation) in the cell may be optionally determined, and the cell may be re-contacted with the first and/or second composition repeatedly until a target protein production efficiency is achieved.

Methods of delivering therapeutic agents to cells and organs

[00278] The present disclosure provides methods of delivering a therapeutic and/or prophylactic to a mammalian cell or organ. Delivery of a therapeutic and/or prophylactic to a cell involves administering a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) including the therapeutic and/or prophylactic to a subject, where administration of the composition involves contacting the cell with the composition. For example, a protein,

cytotoxic agent, radioactive ion, chemotherapeutic agent, or nucleic acid (such as an RNA, *e.g.*, mRNA) may be delivered to a cell or organ. In the instance that a therapeutic and/or prophylactic is an mRNA, upon contacting a cell with the nanoparticle composition, a translatable mRNA may be translated in the cell to produce a polypeptide of interest.

- 5 However, mRNAs that are substantially not translatable may also be delivered to cells. Substantially non-translatable mRNAs may be useful as vaccines and/or may sequester translational components of a cell to reduce expression of other species in the cell.

[00279] In some embodiments, a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) may target a particular type or class of cells (*e.g.*, cells of a particular organ or system thereof). For example, a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) including a therapeutic and/or prophylactic of interest may be specifically delivered to a mammalian liver, kidney, spleen, or lung. Specific delivery to a particular class of cells, an organ, or a system or group thereof implies that a higher proportion of lipid nanoparticles (*e.g.*, loaded LNPs) including a therapeutic and/or prophylactic are delivered to the destination (*e.g.*, tissue) of interest relative to other destinations. In some embodiments, specific delivery of a loaded LNP comprising an mRNA may result in a greater than 2 fold, 5 fold, 10 fold, 15 fold, or 20 fold increase in mRNA expression in cells of the targeted destination (*e.g.*, tissue of interest, such as a liver) as compared to cells of another destination (*e.g.*, the spleen). In some embodiments, the tissue of interest is selected from the group consisting of a liver, a kidney, a lung, a spleen, and tumor tissue (*e.g.*, via intratumoral injection).

[00280] In some embodiments, specific delivery of an mRNA comprised in a loaded LNP of the disclosure (*i.e.*, a lipid nanoparticle formulated with a compound of the disclosure) may result in a greater than 2 fold, 5 fold, 10 fold, 15 fold, or 20 fold increase in mRNA expression as compared to delivery of an mRNA comprised in an LNP formulated with another lipid (*i.e.*, without any of the lipids of Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb).

[00281] As another example of targeted or specific delivery, an mRNA that encodes a protein-binding partner (*e.g.*, an antibody or functional fragment thereof, a scaffold protein, or a peptide) or a receptor on a cell surface may be included in a nanoparticle composition. An mRNA may additionally or instead be used to direct the synthesis and extracellular localization of lipids, carbohydrates, or other biological moieties. Alternatively, other therapeutic and/or prophylactics or elements (*e.g.*, lipids or ligands) of a lipid nanoparticle

(e.g., an empty LNP or a loaded LNP) may be selected based on their affinity for particular receptors (e.g., low density lipoprotein receptors) such that a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may more readily interact with a target cell population including the receptors. For example, ligands may include, but are not limited to, members of a specific binding pair, antibodies, monoclonal antibodies, Fv fragments, single chain Fv (scFv) fragments, Fab' fragments, F(ab')₂ fragments, single domain antibodies, camelized antibodies and fragments thereof, humanized antibodies and fragments thereof, and multivalent versions thereof; multivalent binding reagents including mono- or bi-specific antibodies such as disulfide stabilized Fv fragments, scFv tandems, diabodies, tribodies, or tetrabodies; and aptamers, receptors, and fusion proteins.

[00282] In some embodiments, a ligand may be a surface-bound antibody, which can permit tuning of cell targeting specificity. This is especially useful since highly specific antibodies can be raised against an epitope of interest for the desired targeting site. In some embodiments, multiple antibodies are expressed on the surface of a cell, and each antibody can have a different specificity for a desired target. Such approaches can increase the avidity and specificity of targeting interactions.

[00283] A ligand can be selected, e.g., by a person skilled in the biological arts, based on the desired localization or function of the cell.

[00284] Targeted cells may include, but are not limited to, hepatocytes, epithelial cells, hematopoietic cells, epithelial cells, endothelial cells, lung cells, bone cells, stem cells, mesenchymal cells, neural cells, cardiac cells, adipocytes, vascular smooth muscle cells, cardiomyocytes, skeletal muscle cells, beta cells, pituitary cells, synovial lining cells, ovarian cells, testicular cells, fibroblasts, B cells, T cells, reticulocytes, leukocytes, granulocytes, and tumor cells.

[00285] In some embodiments, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may target hepatocytes. Apolipoproteins such as apolipoprotein E (apoE) have been shown to associate with neutral or near neutral lipid-containing lipid nanoparticles (e.g., empty LNPs or loaded LNPs) in the body, and are known to associate with receptors such as low-density lipoprotein receptors (LDLRs) found on the surface of hepatocytes. Thus, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including a lipid component with a neutral or near neutral charge that is administered to a subject may acquire apoE in a

subject's body and may subsequently deliver a therapeutic and/or prophylactic (e.g., an RNA) to hepatocytes including LDLRs in a targeted manner.

Methods of treating diseases and disorders

[00286] Lipid nanoparticles (e.g., empty LNPs or loaded LNPs) may be useful for treating a disease, disorder, or condition. In particular, such compositions may be useful in treating a disease, disorder, or condition characterized by missing or aberrant protein or polypeptide activity. For example, a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) comprising an mRNA encoding a missing or aberrant polypeptide may be administered or delivered to a cell. Subsequent translation of the mRNA may produce the polypeptide, thereby reducing or eliminating an issue caused by the absence of or aberrant activity caused by the polypeptide. Because translation may occur rapidly, the methods and compositions may be useful in the treatment of acute diseases, disorders, or conditions such as sepsis, stroke, and myocardial infarction. A therapeutic and/or prophylactic included in a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) may also be capable of altering the rate of transcription of a given species, thereby affecting gene expression.

[00287] Diseases, disorders, and/or conditions characterized by dysfunctional or aberrant protein or polypeptide activity for which a composition may be administered include, but are not limited to, rare diseases, infectious diseases (as both vaccines and therapeutics), cancer and proliferative diseases, genetic diseases, autoimmune diseases, diabetes, neurodegenerative diseases, cardio- and reno-vascular diseases, and metabolic diseases. Multiple diseases, disorders, and/or conditions may be characterized by missing (or substantially diminished such that proper protein function does not occur) protein activity. Such proteins may not be present, or they may be essentially non-functional. The present disclosure provides a method for treating such diseases, disorders, and/or conditions in a subject by administering a lipid nanoparticle (e.g., an empty LNP or a loaded LNP) including an RNA and a lipid component including a lipid according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), a phospholipid (optionally unsaturated), a PEG lipid, and a structural lipid, wherein the RNA may be an mRNA encoding a polypeptide that antagonizes or otherwise overcomes an aberrant protein activity present in the cell of the subject.

[00288] The disclosure provides methods involving administering lipid nanoparticles (e.g., empty LNPs or loaded LNPs) including one or more therapeutic and/or prophylactic agents

and pharmaceutical compositions including the same. The terms therapeutic and prophylactic can be used interchangeably herein with respect to features and embodiments of the present disclosure. Therapeutic compositions, or imaging, diagnostic, or prophylactic compositions thereof, may be administered to a subject using any reasonable amount and any route of administration effective for preventing, treating, diagnosing, or imaging a disease, disorder, and/or condition and/or any other purpose. The specific amount administered to a given subject may vary depending on the species, age, and general condition of the subject; the purpose of the administration; the particular composition; the mode of administration; and the like. Compositions in accordance with the present disclosure may be formulated in dosage unit form for ease of administration and uniformity of dosage. It will be understood, however, that the total daily usage of a composition of the present disclosure will be decided by an attending physician within the scope of sound medical judgment. The specific therapeutically effective, prophylactically effective, or otherwise appropriate dose level (*e.g.*, for imaging) for any particular patient will depend upon a variety of factors including the severity and identify of a disorder being treated, if any; the one or more therapeutic and/or prophylactics employed; the specific composition employed; the age, body weight, general health, sex, and diet of the patient; the time of administration, route of administration, and rate of excretion of the specific pharmaceutical composition employed; the duration of the treatment; drugs used in combination or coincidental with the specific pharmaceutical composition employed; and like factors well known in the medical arts.

[00289] A loaded LNP may be administered by any route. In some embodiments, compositions, including prophylactic, diagnostic, or imaging compositions including one or more loaded LNPs described herein, are administered by one or more of a variety of routes, including oral, intravenous, intramuscular, intra-arterial, subcutaneous, trans- or intra-dermal, interdermal, intraperitoneal, mucosal, nasal, intratumoral, intranasal; by inhalation; as an oral spray and/or powder, nasal spray, and/or aerosol, and/or through a portal vein catheter. In some embodiments, a composition may be administered intravenously, intramuscularly, intradermally, intra-arterially, intratumorally, subcutaneously, or by any other parenteral route of administration or by inhalation. However, the present disclosure encompasses the delivery or administration of compositions described herein by any appropriate route taking into consideration likely advances in the sciences of drug delivery. In general, the most appropriate route of administration will depend upon a variety of factors including the nature

of the loaded LNP including one or more therapeutic and/or prophylactics (*e.g.*, its stability in various bodily environments such as the bloodstream and gastrointestinal tract), the condition of the patient (*e.g.*, whether the patient is able to tolerate particular routes of administration), etc.

- 5 [00290] In certain embodiments, compositions in accordance with the present disclosure may be administered at dosage levels sufficient to deliver from about 0.0001 mg/kg to about 10 mg/kg, from about 0.001 mg/kg to about 10 mg/kg, from about 0.005 mg/kg to about 10 mg/kg, from about 0.01 mg/kg to about 10 mg/kg, from about 0.05 mg/kg to about 10 mg/kg, from about 0.1 mg/kg to about 10 mg/kg, from about 1 mg/kg to about 10 mg/kg, from about 2 mg/kg to about 10 mg/kg, from about 5 mg/kg to about 10 mg/kg, from about 0.0001 mg/kg to about 5 mg/kg, from about 0.001 mg/kg to about 5 mg/kg, from about 0.005 mg/kg to about 5 mg/kg, from about 0.01 mg/kg to about 5 mg/kg, from about 0.05 mg/kg to about 5 mg/kg, from about 0.1 mg/kg to about 5 mg/kg, from about 1 mg/kg to about 5 mg/kg, from about 2 mg/kg to about 5 mg/kg, from about 0.0001 mg/kg to about 2.5 mg/kg, from about 0.001 mg/kg to about 2.5 mg/kg, from about 0.005 mg/kg to about 2.5 mg/kg, from about 0.01 mg/kg to about 2.5 mg/kg, from about 0.05 mg/kg to about 2.5 mg/kg, from about 0.1 mg/kg to about 2.5 mg/kg, from about 1 mg/kg to about 2.5 mg/kg, from about 2 mg/kg to about 2.5 mg/kg, from about 0.0001 mg/kg to about 1 mg/kg, from about 0.001 mg/kg to about 1 mg/kg, from about 0.005 mg/kg to about 1 mg/kg, from about 0.01 mg/kg to about 1 mg/kg, from about 0.05 mg/kg to about 1 mg/kg, from about 0.1 mg/kg to about 1 mg/kg, from about 0.0001 mg/kg to about 0.25 mg/kg, from about 0.001 mg/kg to about 0.25 mg/kg, from about 0.005 mg/kg to about 0.25 mg/kg, from about 0.01 mg/kg to about 0.25 mg/kg, from about 0.05 mg/kg to about 0.25 mg/kg, or from about 0.1 mg/kg to about 0.25 mg/kg of a therapeutic and/or prophylactic (*e.g.*, an mRNA) in a given dose, where a dose of 1 mg/kg (mpk) provides 1 mg of a therapeutic and/or prophylactic per 1 kg of subject body weight. In some embodiments, a dose of about 0.001 mg/kg to about 10 mg/kg of a therapeutic and/or prophylactic of a loaded LNP may be administered. In other embodiments, a dose of about 0.005 mg/kg to about 2.5 mg/kg of a therapeutic and/or prophylactic may be administered. In certain embodiments, a dose of about 0.1 mg/kg to about 1 mg/kg may be administered. In other embodiments, a dose of about 0.05 mg/kg to about 0.25 mg/kg may be administered. A dose may be administered one or more times per day, in the same or a different amount, to obtain a desired level of mRNA expression and/or therapeutic, diagnostic, prophylactic, or

imaging effect. The desired dosage may be delivered, for example, three times a day, two times a day, once a day, every other day, every third day, every week, every two weeks, every three weeks, or every four weeks. In certain embodiments, the desired dosage may be delivered using multiple administrations (*e.g.*, two, three, four, five, six, seven, eight, nine, 5 ten, eleven, twelve, thirteen, fourteen, or more administrations). In some embodiments, a single dose may be administered, for example, prior to or after a surgical procedure or in the instance of an acute disease, disorder, or condition.

[00291] Lipid nanoparticles (*e.g.*, empty LNPs or loaded LNPs) including one or more therapeutic and/or prophylactics may be used in combination with one or more other 10 therapeutic, prophylactic, diagnostic, or imaging agents. By “in combination with,” it is not intended to imply that the agents must be administered at the same time and/or formulated for delivery together, although these methods of delivery are within the scope of the present disclosure. For example, one or more lipid nanoparticles (*e.g.*, empty LNPs or loaded LNPs) including one or more different therapeutic and/or prophylactics may be administered in 15 combination. Compositions can be administered concurrently with, prior to, or subsequent to, one or more other desired therapeutics or medical procedures. In general, each agent will be administered at a dose and/or on a time schedule determined for that agent. In some embodiments, the present disclosure encompasses the delivery of compositions, or imaging, diagnostic, or prophylactic compositions thereof in combination with agents that improve 20 their bioavailability, reduce and/or modify their metabolism, inhibit their excretion, and/or modify their distribution within the body.

[00292] It will further be appreciated that therapeutically, prophylactically, diagnostically, or imaging active agents utilized in combination may be administered together in a single composition or administered separately in different compositions. In general, it is expected 25 that agents utilized in combination will be utilized at levels that do not exceed the levels at which they are utilized individually. In some embodiments, the levels utilized in combination may be lower than those utilized individually.

[00293] The particular combination of therapies (therapeutics or procedures) to employ in a combination regimen will take into account compatibility of the desired therapeutics and/or 30 procedures and the desired therapeutic effect to be achieved. It will also be appreciated that the therapies employed may achieve a desired effect for the same disorder (for example, a composition useful for treating cancer may be administered concurrently with a

chemotherapeutic agent), or they may achieve different effects (*e.g.*, control of any adverse effects, such as infusion related reactions).

[00294] A lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) may be used in combination with an agent to increase the effectiveness and/or therapeutic window of the composition. Such an agent may be, for example, an anti-inflammatory compound, a steroid (*e.g.*, a corticosteroid), a statin, an estradiol, a BTK inhibitor, an S1P1 agonist, a glucocorticoid receptor modulator (GRM), or an anti-histamine. In some embodiments, a lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) may be used in combination with dexamethasone, methotrexate, acetaminophen, an H1 receptor blocker, or an H2 receptor blocker. In some embodiments, a method of treating a subject in need thereof or of delivering a therapeutic and/or prophylactic to a subject (*e.g.*, a mammal) may involve pre-treating the subject with one or more agents prior to administering a nanoparticle composition. For example, a subject may be pre-treated with a useful amount (*e.g.*, 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg, 70 mg, 80 mg, 90 mg, 100 mg, or any other useful amount) of dexamethasone, methotrexate, acetaminophen, an H1 receptor blocker, or an H2 receptor blocker. Pre-treatment may occur 24 or fewer hours (*e.g.*, 24 hours, 20 hours, 16 hours, 12 hours, 8 hours, 4 hours, 2 hours, 1 hour, 50 minutes, 40 minutes, 30 minutes, 20 minutes, or 10 minutes) before administration of the lipid nanoparticle (*e.g.*, an empty LNP or a loaded LNP) and may occur one, two, or more times in, for example, increasing dosage amounts.

[00295] Those skilled in the art will recognize, or be able to ascertain using no more than routine experimentation, many equivalents to the specific embodiments in accordance with the disclosure described herein. The scope of the present disclosure is not intended to be limited to the above Description, but rather is as set forth in the appended claims.

[00296] In the claims, articles such as “a,” “an,” and “the” may mean one or more than one unless indicated to the contrary or otherwise evident from the context. Claims or descriptions that include “or” between one or more members of a group are considered satisfied if one, more than one, or all of the group members are present in, employed in, or otherwise relevant to a given product or process unless indicated to the contrary or otherwise evident from the context. The disclosure includes embodiments in which exactly one member of the group is present in, employed in, or otherwise relevant to a given product or process. The disclosure includes embodiments in which more than one, or all, of the group members are present in,

employed in, or otherwise relevant to a given product or process. As used herein, the expressions “one or more of A, B, or C,” “one or more A, B, or C,” “one or more of A, B, and C,” “one or more A, B, and C,” “selected from A, B, and C,” “selected from the group consisting of A, B, and C,” and the like are used interchangeably and all refer to a selection
5 from a group consisting of A, B, and /or C, i.e., one or more As, one or more Bs, one or more Cs, or any combination thereof, unless otherwise specified.

[00297] It is also noted that the term “comprising” is intended to be open and permits but does not require the inclusion of additional elements or steps. When the term “comprising” is used herein, the terms “consisting essentially of” and “consisting of” are thus also
10 encompassed and disclosed. Throughout the description, where compositions are described as having, including, or comprising specific components, it is contemplated that compositions also consist essentially of, or consist of, the recited components. Similarly, where methods or processes are described as having, including, or comprising specific process steps, the processes also consist essentially of, or consist of, the recited processing steps. Further, it
15 should be understood that the order of steps or order for performing certain actions is immaterial so long as the invention remains operable. Moreover, two or more steps or actions can be conducted simultaneously.

[00298] Where ranges are given, endpoints are included. Furthermore, it is to be understood that unless otherwise indicated or otherwise evident from the context and
20 understanding of one of ordinary skill in the art, values that are expressed as ranges can assume any specific value or sub-range within the stated ranges in different embodiments of the disclosure, to the tenth of the unit of the lower limit of the range, unless the context clearly dictates otherwise.

[00299] The synthetic processes of the disclosure can tolerate a wide variety of functional
25 groups, therefore various substituted starting materials can be used. The processes generally provide the desired final compound at or near the end of the overall process, although it may be desirable in certain instances to further convert the compound to a pharmaceutically acceptable salt thereof.

[00300] Compounds of the present disclosure can be prepared in a variety of ways using
30 commercially available starting materials, compounds known in the literature, or from readily prepared intermediates, by employing standard synthetic methods and procedures either known to those skilled in the art, or which will be apparent to the skilled artisan in light of the

- teachings herein. Standard synthetic methods and procedures for the preparation of organic molecules and functional group transformations and manipulations can be obtained from the relevant scientific literature or from standard textbooks in the field. Although not limited to any one or several sources, classic texts such as Smith, M. B., March, J., *March's Advanced Organic Chemistry: Reactions, Mechanisms, and Structure*, 5th edition, John Wiley & Sons: New York, 2001; Greene, T.W., Wuts, P.G. M., *Protective Groups in Organic Synthesis*, 3rd edition, John Wiley & Sons: New York, 1999; R. Larock, *Comprehensive Organic Transformations*, VCH Publishers (1989); L. Fieser and M. Fieser, *Fieser and Fieser's Reagents for Organic Synthesis*, John Wiley and Sons (1994); and L. Paquette, ed., *Encyclopedia of Reagents for Organic Synthesis*, John Wiley and Sons (1995), incorporated by reference herein, are useful and recognized reference textbooks of organic synthesis known to those in the art. The following descriptions of synthetic methods are designed to illustrate, but not to limit, general procedures for the preparation of compounds of the present disclosure.
- 15 **[00301]** The compounds of this disclosure having any of the formulae described herein may be prepared according to the procedures illustrated in Schemes 1, 2, and 3 below, from commercially available starting materials or starting materials which can be prepared using literature procedures. The variables in the schemes (e.g., R¹, R², and R³ etc. are as defined herein). One of ordinary skill in the art will note that, during the reaction sequences and
- 20 synthetic schemes described herein, the order of certain steps may be changed, such as the introduction and removal of protecting groups.
- [00302]** One of ordinary skill in the art will recognize that certain groups may require protection from the reaction conditions via the use of protecting groups. Protecting groups may also be used to differentiate similar functional groups in molecules. A list of protecting
- 25 groups and how to introduce and remove these groups can be found in Greene, T.W., Wuts, P.G. M., *Protective Groups in Organic Synthesis*, 3rd edition, John Wiley & Sons: New York, 1999.
- [00303]** Preferred protecting groups include, but are not limited to:
- [00304]** For a hydroxyl moiety: TBS, benzyl, THP, Ac;
- 30 **[00305]** For carboxylic acids: benzyl ester, methyl ester, ethyl ester, allyl ester;
- [00306]** For amines: Fmoc, Cbz, BOC, DMB, Ac, Bn, Tr, Ts, trifluoroacetyl, phthalimide, benzylideneamine;

[00307] For diols: Ac (x2) TBS (x2), or when taken together acetonides;

[00308] For thiols: Ac;

[00309] For benzimidazoles: SEM, benzyl, PMB, DMB;

[00310] For aldehydes: di-alkyl acetals such as dimethoxy acetal or diethyl acetyl.

- 5 [00311] In the reaction schemes described herein, multiple stereoisomers may be produced. When no particular stereoisomer is indicated, it is understood to mean all possible stereoisomers that could be produced from the reaction. A person of ordinary skill in the art will recognize that the reactions can be optimized to give one isomer preferentially, or new schemes may be devised to produce a single isomer. If mixtures are produced, techniques
- 10 such as preparative thin layer chromatography, preparative HPLC, preparative chiral HPLC, or preparative SFC may be used to separate the isomers.

Scheme 1

- 15 [00312] As illustrated in Scheme 1 above, 8-bromooctanoic acid reacts with an alcohol **a1** (e.g., heptadecan-9-ol) to afford an ester **b1** (e.g., heptadecan-9-yl 8-bromooctanoate). Step 1 can take place in an organic solvent (e.g., dichloromethane) in the presence of, e.g., *N*-(3-dimethylaminopropyl)-*N'*-ethylcarbodiimide hydrochloride, *N,N*-diisopropylethylamine and DMAP. Step 1 can take place at room temperature for 18 h. Next, ester **b1** reacts with 2-
- 20 aminoethan-1-ol to afford amine **c1** (e.g., heptadecan-9-yl 8-((2-hydroxyethyl)amino)octanoate). Step 2 can take place in ethanol at, e.g., a temperature of about 60 °C. Then amine **c1** reacts with a bromoalkyl R¹-Br (e.g., 1-bromotetradecane) to

afford compound **d1** (e.g., heptadecan-9-yl 8-((2-hydroxyethyl)(tetradecyl)amino)octanoate).

Step 3 can take place in ethanol in the presence of *N,N*-diisopropylethylamine.

Scheme 2

- [00313] As illustrated in Scheme 2 above, an acid **a2** (x^3 is an integer between 1 and 7; e.g., 8-bromooctanoic acid) reacts with an alcohol **b2** (e.g., nonan-1-ol) to afford an ester **c2** (e.g., nonyl-8-bromooctanoate). Step 1 can take place in an organic solvent (e.g., dichloromethane) in the presence of, e.g., *N*-(3-dimethylaminopropyl)-*N'*-ethylcarbodiimide hydrochloride, *N,N*-diisopropylethylamine and DMAP. Alcohol **e2** (e.g., heptadecan-9-ol) can be obtained from reacting aldehyde **d2** (e.g., nonanal) with a Grignard reagent $\text{R}^3\text{-MgX}$ (e.g., $\text{n-C}_8\text{H}_{17}\text{MgBr}$) via Step 2. Next, 8-bromooctanoic acid reacts with an alcohol **e2** (e.g., heptadecan-9-ol) to afford an ester **f2** (e.g., heptadecan-9-yl 8-bromooctanoate). Step 3 can take place in an organic solvent (e.g., dichloromethane) in the presence of, e.g., *N*-(3-

dimethylaminopropyl)-*N'*-ethylcarbodiimide hydrochloride, *N,N*-diisopropylethylamine and DMAP. Next, ester **f2** reacts with 2-aminoethan-1-ol to afford amine **g2** (e.g., heptadecan-9-yl 8-((2-hydroxyethyl)amino)octanoate). Step 4 can take place in ethanol in the presence of *i*-Pr₂EtN. Then amine **g2** reacts with ester **c2** (e.g., nonyl-8-bromooctanoate) to afford compound **h2** (e.g., heptadecan-9-yl 8-((2-hydroxyethyl)(8-(nonyloxy)-8-oxooctyl)amino)octanoate). Step 5 can take place in an organic solvent (e.g., a mixture of CPME and MeCN), in the presence of a base (such as an inorganic base (e.g., K₂CO₃) or non-nucleophilic organic base (e.g., *i*-Pr₂EtN)) and a catalyst (e.g., an iodide such as KI or NaI) at, e.g., an elevated temperature (such as at about 70-90 °C, e.g., about 80 °C).

10 Scheme 3

[00314] As illustrated in Scheme 3 above, a haloalkanol (x^3 is an integer between 1 and 12, e.g., 6- bromohexan-1-ol) is reacted with a starting material **a3** (x^2 is an integer between 1 and 6, e.g., 4-(hexyloxy)-4-oxobutanoic acid) to afford a halogenated diester **b3** (e.g., 6-bromohexyl hexyl succinate). Compound **a3** can be obtained by reaction of an alcohol (e.g., hexan-1-ol) with an acid anhydride (e.g. succinic anhydride, dihydro-2H-pyran-2,6(3H)-dione, 3-(tert-butoxy)-3-oxopropanoic acid, 4-(tert-butoxy)-3-methyl-4-oxobutanoic acid, or 4-(tert-butoxy)-2-methyl-4-oxobutanoic acid). Step 1 can take place in an organic solvent (e.g., dichloromethane) in the presence of, e.g., *N*-(3-dimethylaminopropyl)-*N'*-ethylcarbodiimide hydrochloride, *N,N*-diisopropylethylamine and DMAP. Next, halogenated diester **b3** reacts with an amine **c3** (x^4 is an integer between 5 and 13, x^5 is an integer between 1 and 5, e.g., heptadecan-9-yl 8-((2-hydroxyethyl)amino)octanoate) to afford the product **d3**. Step 2 can take place in an organic solvent (e.g., a mixture of CPME and MeCN), in the presence of a base (such as an inorganic base (e.g., K₂CO₃) and a catalyst (e.g., an iodide

such as KI) and an ether solvent (e.g., cyclopentyl methyl ether), at an elevated temperature (e.g., about 90 °C).

[00315] A person of ordinary skill in the art will recognize that in the above schemes the order of certain steps may be interchangeable.

- 5 **[00316]** In certain aspects, the disclosure also includes methods of synthesizing a compound of any of Formulae (1-1), (2-1), (I-a), (A), (B), (A-1), (A-2), (A-3), (IA), (IB), (B-1), (B-2), (B-3), (A-a), (A-a1), (A-a2), (A-a3), (A-b), (A-b1), (A-b2), (A-b3), (A-c), and (B-c) and intermediate(s) for synthesizing the compound.

[00317] In some embodiments, the method of synthesizing a compound of the disclosure

- 10 includes reacting a compound of Formula (X2):  with R¹-Br to afford the compound of the disclosure, wherein each variables are as defined herein. For example, m is 5, 6, 7, 8, or 9, preferably 5, 7, or 9. For example, each of R⁵, R⁶, and R⁷ is H. For example, M is -C(O)O- or -OC(O)-. For example, R⁴ is unsubstituted C₁₋₃ alkyl, or -(CH₂)_nQ, in which n is 2, 3, or 4 and Q is OH, -NHC(S)N(R)₂, -NHC(O)N(R)₂, -N(R)C(O)R, or -
- 15 N(R)S(O)₂R. For example, the reaction of the compound of Formula (X2) with R¹-Br takes place in the presence of a base (such as an inorganic base (e.g., K₂CO₃) or non-nucleophilic organic base (e.g., *i*-Pr₂EtN)). For example, the reaction takes place in the presence of an inorganic base (e.g., K₂CO₃) and a catalyst (e.g., an iodide such as KI or NaI). For example, the reaction takes place at an elevated temperature, e.g., about 50-100 °C, 70-90 °C, or about
- 20 80 °C).

[00318] The method may also include reacting a compound of Formula (X1):

[00319] In some embodiments, the intermediate(s) include those having any of Formulae

variables are as defined herein. For example, the intermediate includes heptadecan-9-yl 8-bromooctanoate, and heptadecan-9-yl 8-((2-hydroxyethyl)amino)octanoate, and morphic
5 forms thereof (e.g., a crystalline form).

[00320] In addition, it is to be understood that any particular embodiment of the present disclosure that falls within the prior art may be explicitly excluded from any one or more of the claims. Since such embodiments are deemed to be known to one of ordinary skill in the art, they may be excluded even if the exclusion is not set forth explicitly herein.

10 [00321] All cited sources, for example, references, publications, databases, database entries, and art cited herein, are incorporated into this application by reference, even if not expressly stated in the citation. In case of conflicting statements of a cited source and the instant application, the statement in the instant application shall control.

15 Examples

Example 1: Synthesis of compounds of Table 1

A. General Considerations

[00322] All solvents and reagents used were obtained commercially and used as such unless noted otherwise. ¹H NMR spectra were recorded in CDCl₃, at 300 K using a Bruker
20 Ultrashield 300 MHz instrument. Chemical shifts are reported as parts per million (ppm) relative to TMS (0.00) for ¹H. Silica gel chromatographies were performed on ISCO CombiFlash Rf+ Lumen Instruments using ISCO RediSep Rf Gold Flash Cartridges (particle size: 20-40 microns). Reverse phase chromatographies were performed on ISCO CombiFlash Rf+ Lumen Instruments using RediSep Rf Gold C18 High Performance
25 columns. All final compounds were determined to be greater than 85% pure *via* analysis by reverse phase UPLC-MS (retention times, RT, in minutes) using Waters Acquity UPLC instrument with DAD and ELSD and a ZORBAX Rapid Resolution High Definition (RRHD) SB-C18 LC column, 2.1 mm, 50 mm, 1.8 μm, and a gradient of 65 to 100% acetonitrile in water with 0.1% TFA over 5 minutes at 1.2 mL/min. Injection volume was 5 μL and the

column temperature was 80 °C. Detection was based on electrospray ionization (ESI) in positive mode using Waters SQD mass spectrometer (Milford, MA, USA) and evaporative light scattering detector.

[00323] The procedures described below are useful in the synthesis of compounds of Table

5 1.

[00324] The following abbreviations are employed herein:

THF: Tetrahydrofuran

MeCN: Acetonitrile

LAH: Lithium Aluminum Hydride

10 DCM: Dichloromethane

DMAP: 4-Dimethylaminopyridine

LDA: Lithium Diisopropylamide

rt: Room Temperature

DME: 1,2-Dimethoxyethane

15 *n*-BuLi: *n*-Butyllithium

CPME: Cyclopentyl methyl ether

i-Pr₂EtN: *N,N*-Diisopropylethylamine

**AA. Compound 6: Heptadecan-9-yl 8-((2-hydroxyethyl)(6-
(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate**

20

Chemical Formula: C₄₃H₈₅NO₆

Molecular Weight: 712.15

[00325] UPLC/ELSD: RT = 3.12 min. MS (ES): *m/z* (MH⁺) 713.191 for C₄₃H₈₅NO₆

¹H NMR (300 MHz, CDCl₃) δ: ppm 4.89 (p, 1H); 4.17 (t, 4H); 3.56 (bm, 2H); 2.75-2.36 (m, 6H); 2.30 (t, 2H); 1.77-1.20 (m, 61H); 0.90 (m, 9H).

25

**AB. Compound 25: Heptadecan-9-yl 8-((3-((2-(methylamino)-3,4-dioxocyclobut-1-en-1-yl)amino)propyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate
6-Bromohexyl (4-nitrophenyl) carbonate**

Chemical Formula: $C_{13}H_{16}BrNO_5$

Molecular Weight: 346.18

- [00326] 4-Nitrophenyl chloroformate (9.35 g, 46.39 mmol) was added in one portion to a solution of 6-bromo-1-hexanol (7 g, 38.658 mmol) in DCM (100 mL) in a round bottom flask charged with a magnetic stir bar at rt. The reaction was kept under N_2 and pyridine (4.69 mL, 57.988 mmol) was added dropwise over 10 min. after which stirring was continued at rt for 16h. The reaction was diluted with water and DCM. The organic layer was separated, and the aqueous layer was washed with DCM. The combined organics were washed with brine, dried with Na_2SO_4 and evaporated under vacuum. The residue was purified by silica gel chromatography (0-100% ethyl acetate in hexanes) to give 6-bromohexyl (4-nitrophenyl) carbonate (10.3 g, 38.7 mmol, 77%). 1H NMR (300 MHz, $CDCl_3$) δ : ppm 8.29 (d, 2H); 7.43 (d, 2H); 4.33 (t, 2H); 3.43 (t, 2H); 2.02-1.69 (m, 4H); 1.53 (m, 4H).

6-Bromohexyl nonyl carbonateChemical Formula: $C_{16}H_{31}BrO_3$

Molecular Weight: 351.33

- [00327] Nonan-1-ol (8.334 g, 57.774 mmol) was added dropwise to a solution of 6-bromohexyl 4-nitrophenyl carbonate (5 g, 14.443 mmol) in DCM (15 mL) in a round bottom flask charged with a magnetic stir bar at rt under N_2 . The reaction was kept under N_2 and pyridine (1.46 mL, 18.054 mmol) was added dropwise over 10 min. followed by 4-dimethylaminopyridine (0.353 g, 2.889 mmol) in one portion. The reaction was allowed to stir at rt for 16h then diluted with water and DCM. The organic layer was separated, and the aqueous layer was washed with DCM. The combined organics were washed with brine, dried with Na_2SO_4 and evaporated under vac. The residue was purified by silica gel chromatography (0-100% ethyl acetate in hexanes) to give 6-bromohexyl nonyl carbonate (1.3 g, 3.7 mmol, 26%). 1H NMR (300 MHz, $CDCl_3$) δ : ppm 4.15 (m, 4H); 3.43 (t, 2H); 1.89 (m, 2H); 1.71 (m, 4H); 1.58-1.18 (m, 16H); 0.90 (m, 3H).

- 25 **Heptadecan-9-yl 8-((3-((*tert*-butoxycarbonyl)amino)propyl)amino)octanoate**

- [00328]** A solution of heptadecan-9-yl 8-bromooctanoate (69.2 g, 0.15 mole) and tert-butyl (3-aminopropyl)carbamate (130.6 g, 0.75 mole) in 500 mL ethanol was heated to 65 °C overnight. The reaction mixture was concentrated, and the crude was purified by flash column chromatography (SiO₂: methanol/dichloromethane 0-20%) to get heptadecan-9-yl 8-((3-((tert-butoxycarbonyl)amino)propyl)amino)octanoate (62 g, 74%) as light yellow oil. MS (CI): m/z (MH^+) 555.5 for $C_{33}H_{66}N_2O_4$. ¹H NMR (300 MHz, CDCl₃): δ ppm 5.15 (bs, 1H); 4.85 (quint., 1H, $J = 6.0$ Hz); 3.17 (m, 2H); 2.65 (t, 2H, $J = 6.6$ Hz); 2.56 (t, 2H, $J = 6.8$ Hz); 2.26 (t, 2H, $J = 7.6$ Hz); 1.68-1.56 (m, 6H); 1.46 (m, 5H); 1.43 (s, 9H); 1.24 (m, 30H); 0.86 (t, 6H, $J = 6.6$ Hz).

Heptadecan-9-yl 8-((3-((tert-butoxycarbonyl)amino)propyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate

- [00329]** To a solution of 6-bromohexyl nonyl carbonate (0.633 g, 1.802 mmol) and heptadecan-9-yl 8-((3-((tert-butoxycarbonyl)amino)propyl)amino)octanoate (1 g, 1.802 mmol) in 40 mL of a 1:1 mixture of cyclopentyl methyl ether and acetonitrile was added potassium carbonate (0.996 g, 7.208 mmol) and potassium iodide (0.329 g, 1.982 mmol). The reaction was heated to 77 °C and stirred for 16 h. The reaction was cooled, filtered and the volatiles were evaporated under vacuum. The residue was purified by silica gel chromatography (0-100% (a solution of 20% MeOH, 80% DCM, 1% NH₄OH) in DCM) to give heptadecan-9-yl 8-((3-((tert-butoxycarbonyl)amino)propyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate (0.32 g, 0.39 mmol, 22%). UPLC/ELSD: RT = 3.02 min. MS (ES): m/z (MH^+) 826.300 for $C_{49}H_{96}N_2O_7$. ¹H NMR (300 MHz, CDCl₃): δ :

ppm 5.65 (bm, 1H); 4.88 (m, 1H); 4.14 (t, 4H); 3.19 (bm, 2H); 3.00 (bm, 1H); 2.52-2.22 (m, 7H); 1.76-1.17 (m, 71H); 0.90 (m, 9H).

Heptadecan-9-yl 8-((3-aminopropyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate

Chemical Formula: $C_{44}H_{88}N_2O_5$
Molecular Weight: 725.20

- 5 **[00330]** To a solution of heptadecan-9-yl 8-((3-((*tert*-butoxycarbonyl)amino)propyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate (320 mg, 0.39 mmol) in 3 mL DCM was added trifluoroacetic acid (0.6 mL, 7.8 mmol) and the solution stirred at room temp for 16 hours. The reaction was quenched by adding a saturated sodium bicarbonate solution at 0 °C. The organic layer was washed with a saturated sodium bicarbonate solution and brine. After
- 10 drying with anhydrous sodium sulfate, the solvent was removed under vacuum to give heptadecan-9-yl 8-((3-aminopropyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate (283 mg, quant). UPLC/ELSD: RT = 2.39 min. MS (ES): m/z (MH^+) 726.142 for $C_{44}H_{88}N_2O_5$. 1H NMR (300 MHz, $CDCl_3$) δ : ppm 4.87 (m, 1H); 4.14 (m, 4H); 3.21-2.97 (m, 4H); 2.78 (m, 4H); 2.30 (m, 2H); 2.04 (m, 2H); 1.80-1.17 (m, 60H); 0.90 (m, 9H).

- 15 **3-Methoxy-4-(methylamino)cyclobut-ene-1,2-dione**

Chemical Formula: $C_6H_7NO_3$
Molecular Weight: 141.13

- [00331]** To a solution of 3,4-dimethoxy-3-cyclobutene-1,2-dione (1 g, 7 mmol) in 100 mL diethyl ether was added a 2M methylamine solution in THF (3.8 mL, 7.6 mmol) and a ppt. formed almost immediately. The mixture was stirred at rt for 24 hours, then filtered, the filter
- 20 solids washed with diethyl ether and air-dried. The filter solids were dissolved in hot EtOAc, filtered, the filtrate allowed to cool to room temp., then cooled to 0 °C to give a ppt. This was isolated via filtration, washed with cold EtOAc, air-dried, then dried under vacuum to give 3-methoxy-4-(methylamino)cyclobut-3-ene-1,2-dione (0.70 g, 5 mmol, 73%) as a white solid.

¹H NMR (300 MHz, DMSO-*d*₆) δ: ppm 8.50 (br. d, 1H, J = 69 Hz); 4.27 (s, 3H); 3.02 (sdd, 3H, J = 42 Hz, 4.5 Hz).

Heptadecan-9-yl 8-((3-((2-(methylamino)-3,4-dioxocyclobut-1-en-1-yl)amino)propyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate

Chemical Formula: C₄₉H₉₁N₃O₇
Molecular Weight: 834.28

5

[00332] To a solution of heptadecan-9-yl 8-((3-aminopropyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate (0.2 g, 0.28 mmol) in THF (2 mL) and water (0.4 mL) was added 3-methoxy-4-(methylamino)cyclobut-3-ene-1,2-dione (0.06 g, 0.41 mmol), the reaction heated to 67 °C and stirred for 20 h. The reaction was allowed to cool to rt during which the clear solution became a turbid mixture. Anhydrous MgSO₄ was added, the reaction was filtered and the filtrate conc. The residue was purified by silica gel chromatography (0-100% (a solution of 20% MeOH, 80% DCM, 1% NH₄OH) in DCM) to give heptadecan-9-yl 8-((3-((2-(methylamino)-3,4-dioxocyclobut-1-en-1-yl)amino)propyl)(6-(((nonyloxy)carbonyl)oxy)hexyl)amino)octanoate (120 mg, 0.14 mmol, 50%). UPLC/ELSD: RT = 2.81 min. MS (ES): *m/z* (MH⁺) 835.058 for C₄₉H₉₁N₃O₇. ¹H NMR (300 MHz, CDCl₃) δ: ppm 4.88 (p, 1H); 4.14 (m, 4H); 3.74 (m, 2H); 3.40-2.90 (m, 9H); 2.31 (m, 2H); 2.12 (m, 2H); 1.80-1.20 (m, 62H); 0.90 (m, 9H).

AC. Compound 64: Heptadecan-9-yl 8-((2-hydroxyethyl)(6-(((3-pentylloctyl)oxy)carbonyl)oxy)hexyl)amino)octanoate

Chemical Formula: C₄₇H₉₃NO₆

Molecular Weight: 768.26

20

[00333] UPLC/ELSD: RT = 3.04 min. MS (ES): *m/z* (MH⁺) 769.313 for C₄₇H₉₃NO₆. ¹H NMR (300 MHz, CDCl₃) δ: ppm 4.89 (p, 1H); 4.14 (m, 4H); 3.54 (bm, 2H); 2.66-2.37 (m, 6H); 2.30 (m, 2H); 1.77-1.17 (m, 66H); 0.91 (m, 12H).

25

AD. Compound 65: Heptadecan-9-yl 8-(((6-(((3-hexylnonyl)oxy)carbonyl)oxy)hexyl)(3-((2-(methylamino)-3,4-dioxocyclobut-1-en-1-yl)amino)propyl)amino)octanoate
Ethyl 3-hexylnon-2-enoate

Chemical Formula: C₁₇H₃₂O₂
 Molecular Weight: 268.44

- 5 [00334] Triethyl phosphonoacetate (26.33 g, 117.4 mmol) was added dropwise over 20 minutes to a suspension of sodium hydride (4.697 g, 117.4 mmol) in THF (294 mL) and the mixture was stirred at room temperature until gas evolution ceased (approximately 30 min). The reaction mixture was chilled to 0 °C and 7-tridecanone (10 g, 58.7 mmol) was added. The reaction was gradually warmed to room temperature, then heated to reflux and stirred
- 10 overnight. The reaction was quenched with saturated aqueous sodium bicarbonate. The aqueous phase was extracted with diethyl ether, and the organic extracts were washed with brine, dried with MgSO₄, and concentrated. The crude material was purified by silica gel chromatography (0-20% EtOAc:hexanes) to afford ethyl 3-hexylnon-2-enoate (6.7 g, 27.9 mmol, 47.5%) as a clear oil. ¹H NMR (300 MHz, CDCl₃) δ: ppm 5.63 (s, 1H); 4.15 (q, 2H);
- 15 2.61 (t, 2H); 2.15 (t, 2H); 1.53-1.20 (m, 19H); 0.91 (m, 6H).

Ethyl 3-hexylnonanoate

Chemical Formula: C₁₇H₃₄O₂
 Molecular Weight: 270.46

- [00335] To a flask containing a slurry of Pearlman's catalyst (0.73 g, 5.2 mmol) in ethanol (20 mL) under N₂ was added a solution of ethyl 3-hexylnon-2-enoate (6.975 g, 25.9 mmol) in
- 20 ethanol (5 mL). The reaction was stirred under H₂ (balloon) for 16h. The reaction was filtered through a plug of Celite and the filtrate was evaporated under vacuum to afford ethyl 3-hexylnonanoate (6.7 g, 24.7 mmol, 95 %). The residue was taken to the next step without further purification. ¹H NMR (300 MHz, CDCl₃) δ: ppm 4.16 (q, 2H); 2.23 (d, 2H); 1.86 (bs, 1H); 1.28 (m, 23H); 0.90 (m, 6H).

- 25 **3-Hexylnonan-1-ol**

Chemical Formula: $C_{15}H_{32}O$

Molecular Weight: 228.42

[00336] To a solution of lithium aluminium hydride (49.5 mL of 1M solution in THF, 49.5 mmol) in THF was added a solution of ethyl 3-hexylnonanoate (6.7 g, 24.7 mmol) in THF (20 mL). The reaction was stirred at rt for 16h. The reaction was

5 quenched with a saturated solution of sodium sulfate decahydrate. The white solids were removed by filtration through a plug of Celite and the filtrate was evaporated under vacuum. The residue was purified by flash chromatography (ISCO) by 0-100% ethyl acetate in hexanes to obtain 3-hexylnonan-1-ol (5.62 g, 24.6 mmol, 99%). 1H NMR (300 MHz, $CDCl_3$) δ : ppm 3.69 (t, 2H); 1.61-1.19 (m, 24H); 0.91 (m, 6H).

- 10 **Heptadecan-9-yl 8-((6-(((3-hexylnonyl)oxy)carbonyl)oxy)hexyl)(3-((2-(methylamino)-3,4-dioxocyclobut-1-en-1-yl)amino)propyl)amino)octanoate**

Chemical Formula: $C_{55}H_{103}N_3O_7$

Molecular Weight: 918.44

[00337] Compound 65 was prepared analogously to compound 25 using 3-hexylnonan-1-ol instead of nonan-1-ol. UPLC/ELSD: RT = 3.13 min. MS (ES): m/z (MH^+) 919.429 for

- 15 $C_{55}H_{103}N_3O_7$. 1H NMR (300 MHz, $CDCl_3$) δ : ppm 4.87 (p, 1H); 4.17 (m, 4H); 3.68 (bm, 2H); 3.30 (m, 3H); 2.65-2.41 (m, 6H); 2.31 (m, 2H); 1.87-1.19 (m, 73H); 0.90 (m, 12H).

AE. Compound 66: Heptadecan-9-yl 8-((6-(((3-hexylnonyl)oxy)carbonyl)oxy)hexyl)(2-hydroxyethyl)amino)octanoate

Chemical Formula: $C_{49}H_{97}NO_6$

Molecular Weight: 796.32

[00338] UPLC/ELSD: RT = 3.16 min. MS (ES): m/z (MH^+) 797.683 for $C_{49}H_{97}NO_6$

¹H NMR (300 MHz, CDCl₃) δ: ppm 4.89 (p, 1H); 4.14 (m, 4H); 3.54 (bm, 2H); 2.68-2.38 (m, 6H); 2.30 (m, 2H); 1.77-1.17 (m, 70H), 0.90 (m, 12H).

AF. Compound 67: Heptadecan-9-yl 8-((3-((2-(methylamino)-3,4-dioxocyclobut-1-en-1-yl)amino)propyl)(6-(((3-pentyl-octyl)oxy)carbonyl)oxy)hexyl)amino)octanoate

Chemical Formula: C₅₃H₉₉N₃O₇
Molecular Weight: 890.39

5

[00339] Compound 67 was prepared analogously to compound 65 using 6-undecanone instead of 7-tridecanone. UPLC/ELSD: RT = 3.04 min. MS (ES): *m/z* (MH⁺) 891.552 for C₅₃H₉₉N₃O₇. ¹H NMR (300 MHz, CDCl₃) δ: ppm 4.87 (p, 1H); 4.17 (m, 4H); 3.67 (bm, 2H); 3.28 (m, 3H); 2.68-2.38 (m, 6H); 2.31 (m, 2H); 1.86-1.18 (m, 69H); 0.90 (m, 12H).

10

Example 2: Expression of hEPO induced by sample formulations in mice and residual lipid levels in the liver

[00340] To assess potency of expression and metabolic stability of lipids of the disclosure the hepatocyte protein expression (hEPO) following administration of a nanoparticle of the disclosure (e.g., a loaded LNP) to mice was measured.

[00341] Lipid nanoparticles (LNPs) including DSPC as a phospholipid, cholesterol as a structural lipid, PEG-1 as a PEG lipid, a compound according to Formula (A), (A1), (A2), (A3), (B), (I), (I'), (I-X), (I-Y), (I-Ya) (IA), (Ia), (Ib), (Ic), (Id), (Ie), (If), (Ig), (II), (IIa), or (IIb), and an mRNA encoding hEPO were intravenously administered to CD-1 mice. The concentration of hEPO in serum was tested at 6 h after injection. The particles tested had a PDI of between about 0.1–0.4, an encapsulation efficiency of between about 82–99%, and a particle diameter of about 56–145 nm. All of the tested LNPs demonstrated effective delivery of mRNA to hepatocytes with varying amounts of lipid remaining in the livers of the mice after 24h.

[00342] **Table 2.** Expression of hEPO induced by administration of LNPs comprising lipids of the disclosure in mice and residual lipid levels in the liver.

Ionizable Lipid Compound No.	Mean 6 hr hEPO Concentration (mIU/mL)	hEPO AUC	Parent Lipid Remaining (nmol/g liver tissue) at 24 h	Approx. Percent Total Dose of Parent Lipid Remaining at 24 h
6	509181.4	8.19E+06	3 ± 1	2%
64	735556.2	1.11E+07	72 ± 17	51%
66	641899.1	9.77E+06	67 ± 8	48%
67	891982.2	1.31E+07	94 ± 15	>95%
65	521341.6	7.76E+06	364 ± 58	>95%

^aThe percent of total dose calculation assumes a 25 g mouse with a 1.5 g liver

^b>95% equals very slowly metabolism of the lipid

Enumerated Embodiments

Embodiment 1. A compound of Formula (II):

or a salt or isomer thereof, wherein:

- 5 R^1 is selected from the group consisting of C_{5-30} alkyl, C_{5-20} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R''M'R^{'}$;
- R^2 and R^3 are independently selected from the group consisting of H, C_{1-14} alkyl, C_{2-14} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^*OR^{**}$, or R^2 and R^3 , together with the atom to which they are attached, form a heterocycle or carbocycle;
- 10 R^4 is selected from the group consisting of hydrogen, a C_{3-6} carbocycle, $-(CH_2)_nQ$, $-(CH_2)_nCHQR$, $-(CH_2)_6C(R^{12})_2(CH_2)_{n-6}Q$, $-CHQR$, $-CQ(R)_2$, $-C(O)NQR$ and unsubstituted C_{1-6} alkyl, where Q is selected from a carbocycle, heterocycle, $-OR$, $-O(CH_2)_nN(R)_2$, $-C(O)OR$, $-OC(O)R$, $-CX_3$, $-CX_2H$, $-CXH_2$, $-CN$, $-N(R)_2$, $-C(O)N(R)_2$, $-N(R)C(O)R$, $-N(R)S(O)_2R$,
- 15 $-N(R)C(O)N(R)_2$, $-N(R)C(S)N(R)_2$, $-N(R)R^8$, $-N(R)S(O)_2R^8$, $-O(CH_2)_nOR$, $-N(R)C(=NR^9)N(R)_2$, $-N(R)C(=CHR^9)N(R)_2$, $-OC(O)N(R)_2$, $-N(R)C(O)OR$, $-N(OR)C(O)R$, $-N(OR)S(O)_2R$, $-N(OR)C(O)OR$, $-N(OR)C(O)N(R)_2$, $-N(OR)C(S)N(R)_2$, $-N(OR)C(=NR^9)N(R)_2$, $-N(OR)C(=CHR^9)N(R)_2$, $-C(=NR^9)N(R)_2$, $-C(=NR^9)R$, $-C(O)N(R)OR$,
- 20 $-(CH_2)_nN(R)_2$, $-C(R)N(R)_2C(O)OR$, $NC(R)=R^{11}$, $N(C=NR^{15})R^{11}$, $NRC(C(O)N R^{14}R^{14'})_2$, $-$

$NRC(O)(CH_2)_pC(O)N R^{14}R^{14'}$, and , wherein A is C_{6-10} aryl or a heterocycle; and

each o is independently selected from 1, 2, 3, and 4; p is 0, 1, 2, 3, or 4; q is 1, 2, 3, or 4; and each n is independently selected from 1, 2, 3, 4, and 5; or

X^a and X^b are each independently O or S;

R^{10} is selected from the group consisting of H, halo, -OH, R, -N(R)₂, -CN, -N₃, -

5 C(O)OH, -C(O)OR, -OC(O)R, -OR, -SR, -S(O)R, -S(O)OR, -S(O)₂OR, -NO₂, -S(O)₂N(R)₂, -N(R)S(O)₂R, -NH(CH₂)_{t¹}N(R)₂, -NH(CH₂)_{p¹}O(CH₂)_{q¹}N(R)₂, -NH(CH₂)_{s¹}OR, -N((CH₂)_{s¹}OR)₂, -N(R)-carbocycle, -N(R)-heterocycle, -N(R)-aryl, -N(R)-heteroaryl, -N(R)(CH₂)_{t¹}-carbocycle, -N(R)(CH₂)_{t¹}-heterocycle, -N(R)(CH₂)_{t¹}-aryl, -N(R)(CH₂)_{t¹}-heteroaryl, a carbocycle, a heterocycle, aryl and heteroaryl;

10 n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10;

r is 0 or 1;

t^1 is selected from 1, 2, 3, 4, and 5;

p^1 is selected from 1, 2, 3, 4, and 5;

q^1 is selected from 1, 2, 3, 4, and 5; and

15 s^1 is selected from 1, 2, 3, 4, and 5;

each R^5 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

each R^6 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

20 M is selected from -OC(O)O-, -OC(O)-NR^M-C(O)O-, -O-M''-O-, -OC(O)N(R^M)-, -N(R^M)C(O)O-, -NR^MC(O)NR^M-, -O-N=C(R^M)-, SO-, -OS-, -S(R^M)₂O-, -O-S(R^M)₂-, -S(O)O-, -OS(O)-, in which M'' is a bond, -(CH₂)_zC(O)-, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, -B(R^{**})-, -Si(R^{**})₂-, -S(R^{**})₂-, or -S(O)-, wherein z is 1, 2, 3, or 4;

25 M' is selected from -OC(O)O-, -C(O)O-, -OC(O)-, -OC(O)-M''-C(O)O-, -OC(O)-NR^M-C(O)O-, -O-M''-O-, -C(O)N(R^M)-, -N(R^M)C(O)-, -OC(O)N(R^M)-, -N(R^M)C(O)O-, -NR^MC(O)NR^M-, -O-N=C(R^M)-, -C(O)-, -C(S)-, -C(S)S-, -SC(S)-, -CH(OH)-, -P(O)(OR^M)O-, -S(O)₂-, -S-S-, -SO-, -OS-, S(R^M)₂O-, -O-S(R^M)₂-, -S(O)O-, -OS(O)-, an aryl group, and a heteroaryl group, in which M'' is a bond, -(CH₂)_zC(O)-, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, -B(R^{**})-, -Si(R^{**})₂-, -S(R^{**})₂-, or -S(O)-, wherein z is 1, 2, 3, or 4;

- R^7 is selected from the group consisting of C_{1-3} alkyl, C_{2-3} alkenyl, and H;
- R^8 is selected from the group consisting of C_{3-6} carbocycle and heterocycle;
- R^9 is selected from the group consisting of H, CN, NO_2 , C_{1-6} alkyl, -OR, $-S(O)_2R$, $-S(O)_2N(R)_2$, C_{2-6} alkenyl, C_{3-6} carbocycle and heterocycle;
- 5 R^{11} is selected from the group consisting of C_{3-6} carbocycle and heterocycle, wherein the C_{3-6} carbocycle and heterocycle are each optionally substituted with one or more R^{13} ;
- R^{12} is selected from the group consisting of H, OH, C_{1-3} alkyl, and C_{2-3} alkenyl;
- each R^{13} is selected from the group consisting of OH, oxo, halo, C_{1-6} alkyl, C_{1-6} alkoxyl, C_{2-6} alkenyl, C_{1-6} alkylamino, di- $(C_{1-6}$ alkyl) amino, amino, amido, cyano, and nitro;
- 10 each R^{14} is independently selected from the group consisting of H, OH, C_{1-6} alkyl, and C_{2-3} alkenyl;
- each $R^{14'}$ is independently selected from the group consisting of H, OH, C_{1-6} alkyl, and C_{2-3} alkenyl;
- R^{15} is independently selected from the group consisting of H, OH, C_{1-6} alkyl, and
- 15 C_{2-3} alkenyl;
- each R is independently selected from the group consisting of C_{1-6} alkyl, C_{1-3} alkyl-aryl, C_{2-3} alkenyl, and H;
- R^N is H, or C_{1-3} alkyl;
- each R' is independently selected from the group consisting of C_{1-18} alkyl, C_{2-18}
- 20 alkenyl, $-R^*YR^{**}$, $-YR^{**}$, $(CH_2)_qOR^*$, and H,
- and each q is independently selected from 1, 2, and 3;
- each R^M is independently selected from the group consisting of H, C_{1-6} alkyl and C_{2-6} alkenyl;
- each R'' is independently selected from the group consisting of C_{3-15} alkyl and
- 25 C_{3-15} alkenyl;
- each R^{***} is selected from the group consisting of C_{1-15} alkyl and C_{2-15} alkenyl;
- each R^* is independently selected from the group consisting of C_{1-12} alkyl and C_{2-12} alkenyl;
- each R^{**} is independently selected from the group consisting of H, OH, C_{1-12} alkyl,
- 30 C_{2-12} alkenyl, $(CH_2)_qOR^*$, and $(CH_2)_qOH$;
- each Y is independently a C_{3-6} carbocycle;
- each X is independently selected from the group consisting of F, Cl, Br, and I; and

m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

Embodiment 2. A compound of Formula (I' 1):

5 or a salt or isomer thereof, wherein:

R¹ is selected from the group consisting of C₅₋₃₀ alkyl, C₅₋₂₀ alkenyl, -R*YR**', -YR*', and -R''M'R';

R² and R³ are independently selected from the group consisting of H, C₁₋₁₄ alkyl, C₂₋₁₄ alkenyl, -R*YR**', -YR*', and -R*OR**', or R² and R³, together with the atom to which they
10 are attached, form a heterocycle or carbocycle;

R⁴ is selected from the group consisting of hydrogen, a C₃₋₆ carbocycle, -(CH₂)_nQ, -(CH₂)_nCHQR, -(CH₂)_nC(R¹²)(CH₂)_{n-o}Q, -CHQR, -CQ(R)₂, -C(O)NQR and unsubstituted C₁₋₆ alkyl, where Q is selected from a carbocycle, heterocycle, -OR, -O(CH₂)_nN(R)₂, -C(O)OR,

15 -OC(O)R, -CX₃, -CX₂H, -CXH₂, -CN, -N(R)₂, -C(O)N(R)₂, -N(R)C(O)R, -N(R)S(O)₂R, -N(R)C(O)N(R)₂, -N(R)C(S)N(R)₂, -N(R)R⁸, -N(R)S(O)₂R⁸, -O(CH₂)_nOR, -N(R)C(=NR⁹)N(R)₂, -N(R)C(=CHR⁹)N(R)₂, -OC(O)N(R)₂, -N(R)C(O)OR, -N(OR)C(O)R, -N(OR)S(O)₂R, -N(OR)C(O)OR, -N(OR)C(O)N(R)₂, -N(OR)C(S)N(R)₂, -N(OR)C(=NR⁹)N(R)₂, -N(OR)C(=CHR⁹)N(R)₂, -C(=NR⁹)N(R)₂, -C(=NR⁹)R, -
20 C(O)N(R)OR, -(CH₂)_nN(R)₂, -C(R)N(R)₂C(O)OR, NC(R)=R¹¹, N(C=NR¹⁵)R¹¹, NRC(C(O)N R¹⁴R^{14'})₂, -

NRC(O)(CH₂)_pC(O)N R¹⁴R^{14'}, and , wherein A is C₆₋₁₀ aryl or a heterocycle; and

each o is independently selected from 1, 2, 3, and 4; p is 0, 1, 2, 3, or 4; q is 1, 2, 3, or
25 4; and each n is independently selected from 1, 2, 3, 4, and 5; or

X^a and X^b are each independently O or S;

R^{10} is selected from the group consisting of H, halo, -OH, R, -N(R)₂, -CN, -N₃, -

C(O)OH, -C(O)OR, -OC(O)R, -OR, -SR, -S(O)R, -S(O)OR, -S(O)₂OR, -NO₂, -

5 S(O)₂N(R)₂, -N(R)S(O)₂R, -NH(CH₂)_{t1}N(R)₂, -NH(CH₂)_{p1}O(CH₂)_{q1}N(R)₂, -
NH(CH₂)_{s1}OR, -N((CH₂)_{s1}OR)₂, -N(R)-carbocycle, -N(R)-heterocycle, -N(R)-aryl, -
N(R)-heteroaryl, -N(R)(CH₂)_{t1}-carbocycle, -N(R)(CH₂)_{t1}-heterocycle, -N(R)(CH₂)_{t1}-
aryl, -N(R)(CH₂)_{t1}-heteroaryl, a carbocycle, a heterocycle, aryl and heteroaryl;

n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10;

10 r is 0 or 1;

t^1 is selected from 1, 2, 3, 4, and 5;

p^1 is selected from 1, 2, 3, 4, and 5;

q^1 is selected from 1, 2, 3, 4, and 5; and

s^1 is selected from 1, 2, 3, 4, and 5;

15 each R^5 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃
alkenyl, and H;

each R^6 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃
alkenyl, and H;

20 M is selected from -OC(O)O-, -C(O)O-, -OC(O)-, -OC(O)-M''-C(O)O-, -OC(O)-
NR^M-C(O)O-, -O-M''-O-, -C(O)N(R^M)-, -N(R^M)C(O)-, -OC(O)N(R^M)-, -N(R^M)C(O)O-, -
NR^MC(O)NR^M-, -O-N=C(R^M)-, -C(O)-, -C(S)-, -C(S)S-, -SC(S)-, -CH(OH)-, -P(O)(OR^M)O-,
-S(O)₂-, -S-S-, -SO-, -OS-, S(R^M)₂O-, -O-S(R^M)₂-, -S(O)O-, -OS(O)-, an aryl group, and a
heteroaryl group, in which M'' is a bond, -(CH₂)_zC(O)-, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, -B(R^{**})-, -
Si(R^{**})₂-, -S(R^{**})₂-, or -S(O)-, wherein z is 1, 2, 3, or 4;

25 M' is selected from -OC(O)O-, -OC(O)-NR^M-C(O)O-, -O-M''-O-, -OC(O)N(R^M)-, -
N(R^M)C(O)O-, -NR^MC(O)NR^M-, -O-N=C(R^M)-, SO-, -OS-, -S(R^M)₂O-,
-O-S(R^M)₂-, -S(O)O-, -OS(O)-, in which M'' is a bond, -(CH₂)_zC(O)-, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl,
-B(R^{**})-, -Si(R^{**})₂-, -S(R^{**})₂-, or -S(O)-, wherein z is 1, 2, 3, or 4;

R^7 is selected from the group consisting of C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

R⁸ is selected from the group consisting of C₃₋₆ carbocycle and heterocycle;

R⁹ is selected from the group consisting of H, CN, NO₂, C₁₋₆ alkyl, -OR, -S(O)₂R, -S(O)₂N(R)₂, C₂₋₆ alkenyl, C₃₋₆ carbocycle and heterocycle;

R¹¹ is selected from the group consisting of C₃₋₆ carbocycle and heterocycle, wherein
 5 the C₃₋₆ carbocycle and heterocycle are each optionally substituted with one or more R¹³;

R¹² is selected from the group consisting of H, OH, C₁₋₃ alkyl, and C₂₋₃ alkenyl;

each R¹³ is selected from the group consisting of OH, oxo, halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, C₂₋₆ alkenyl, C₁₋₆ alkylamino, di-(C₁₋₆ alkyl) amino, amino, amido, cyano, and nitro;

each R¹⁴ is independently selected from the group consisting of H, OH, C₁₋₆ alkyl, and
 10 C₂₋₃ alkenyl;

each R^{14'} is independently selected from the group consisting of H, OH, C₁₋₆ alkyl, and C₂₋₃ alkenyl;

R¹⁵ is independently selected from the group consisting of H, OH, C₁₋₆ alkyl, and C₂₋₃ alkenyl;

15 each R is independently selected from the group consisting of C₁₋₆ alkyl, C₁₋₃ alkyl-aryl, C₂₋₃ alkenyl, and H;

R^N is H, or C₁₋₃ alkyl;

each R['] is independently selected from the group consisting of C₁₋₁₈ alkyl, C₂₋₁₈ alkenyl, -R*YR*", -YR*", (CH₂)_qOR*, and H,

20 and each q is independently selected from 1, 2, and 3;

each R^M is independently selected from the group consisting of H, C₁₋₆ alkyl and C₂₋₆ alkenyl;

each R["] is independently selected from the group consisting of C₃₋₁₅ alkyl and C₃₋₁₅ alkenyl;

25 each R^{***} is selected from the group consisting of C₁₋₁₅ alkyl and C₂₋₁₅ alkenyl;

each R^{*} is independently selected from the group consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl;

each R^{**} is independently selected from the group consisting of H, OH, C₁₋₁₂ alkyl, C₂₋₁₂ alkenyl, (CH₂)_qOR*, and (CH₂)_qOH;

30 each Y is independently a C₃₋₆ carbocycle;

each X is independently selected from the group consisting of F, Cl, Br, and I; and

m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

Embodiment 3. A compound of Formula (IX1):

wherein:

- R^1 is selected from the group consisting of C_{5-30} alkyl, C_{5-20} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R''M'R'$;
- R^2 and R^3 are independently selected from the group consisting of H, C_{1-14} alkyl, C_{2-14} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^*OR^{**}$, or R^2 and R^3 , together with the atom to which they are attached, form a heterocycle or carbocycle;
- R^4 is selected from the group consisting of hydrogen, a C_{3-6} carbocycle, $-(CH_2)_nQ$, $-(CH_2)_nCHQR$, $-(CH_2)_nC(R^{12})_2(CH_2)_{n-o}Q$, $-CHQR$, $-CQ(R)_2$, $-C(O)NQR$ and unsubstituted C_{1-6} alkyl, where Q is selected from a carbocycle, heterocycle, $-OR$, $-O(CH_2)_nN(R)_2$, $-C(O)OR$, $-OC(O)R$, $-CX_3$, $-CX_2H$, $-CXH_2$, $-CN$, $-N(R)_2$, $-C(O)N(R)_2$, $-N(R)C(O)R$, $-N(R)S(O)_2R$, $-N(R)C(O)N(R)_2$, $-N(R)C(S)N(R)_2$, $-N(R)R^8$, $-N(R)S(O)_2R^8$, $-O(CH_2)_nOR$, $-N(R)C(=NR^9)N(R)_2$, $-N(R)C(=CHR^9)N(R)_2$, $-OC(O)N(R)_2$, $-N(R)C(O)OR$, $-N(OR)C(O)R$, $-N(OR)S(O)_2R$, $-N(OR)C(O)OR$, $-N(OR)C(O)N(R)_2$, $-N(OR)C(S)N(R)_2$, $-N(OR)C(=NR^9)N(R)_2$, $-N(OR)C(=CHR^9)N(R)_2$, $-C(=NR^9)N(R)_2$, $-C(=NR^9)R$, $-C(O)N(R)OR$, $-(CH_2)_nN(R)_2$, $-C(R)N(R)_2C(O)OR$, $NC(R)=R^{11}$, $N(C=NR^{15})R^{11}$, $NRC(C(O)N R^{14}R^{14'})_2$, $-$

- $-NRC(O)(CH_2)_pC(O)N R^{14}R^{14'}$, and , wherein A is C_{6-10} aryl or a heterocycle; and

each o is independently selected from 1, 2, 3, and 4; p is 0, 1, 2, 3, or 4; q is 1, 2, 3, or 4; and each n is independently selected from 1, 2, 3, 4, and 5; or

X^a and X^b are each independently O or S;

R^{10} is selected from the group consisting of H, halo, -OH, R, -N(R)₂, -CN, -N₃, -

C(O)OH, -C(O)OR, -OC(O)R, -OR, -SR, -S(O)R, -S(O)OR, -S(O)₂OR, -NO₂, -

5 S(O)₂N(R)₂, -N(R)S(O)₂R, -NH(CH₂)_{t1}N(R)₂, -NH(CH₂)_{p1}O(CH₂)_{q1}N(R)₂, -
NH(CH₂)_{s1}OR, -N((CH₂)_{s1}OR)₂, -N(R)-carbocycle, -N(R)-heterocycle, -N(R)-aryl, -
N(R)-heteroaryl, -N(R)(CH₂)_{t1}-carbocycle, -N(R)(CH₂)_{t1}-heterocycle, -N(R)(CH₂)_{t1}-
aryl, -N(R)(CH₂)_{t1}-heteroaryl, a carbocycle, a heterocycle, aryl and heteroaryl;

n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10;

10 r is 0 or 1;

t^1 is selected from 1, 2, 3, 4, and 5;

p^1 is selected from 1, 2, 3, 4, and 5;

q^1 is selected from 1, 2, 3, 4, and 5; and

s^1 is selected from 1, 2, 3, 4, and 5;

15 each R^5 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃
alkenyl, and H;

each R^6 is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃
alkenyl, and H;

20 M^* is selected from -OC(O)O-, -C(O)O-, -OC(O)-, -OC(O)-M''-C(O)O-, -OC(O)-
NR^M-C(O)O-, -O-M''-O-, -C(O)N(R^M)-, -N(R^M)C(O)-, -OC(O)N(R^M)-, -N(R^M)C(O)O-, -
NR^MC(O)NR^M-, -O-N=C(R^M)-, -C(O)-, -C(S)-, -C(S)S-, -SC(S)-, -CH(OH)-, -P(O)(OR^M)O-,
-S(O)₂-, -S-S-, -SO-, -OS-, S(R^M)₂O-, -O-S(R^M)₂-, -S(O)O-, -OS(O)-, an aryl group, and a
heteroaryl group, in which M'' is a bond, -(CH₂)_zC(O)-, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, -B(R^{**})-, -
Si(R^{**})₂-, -S(R^{**})₂-, or -S(O)-, wherein z is 1, 2, 3, or 4;

25 R^7 is selected from the group consisting of C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;

R^8 is selected from the group consisting of C₃₋₆ carbocycle and heterocycle;

R^9 is selected from the group consisting of H, CN, NO₂, C₁₋₆ alkyl, -OR, -S(O)₂R, -
S(O)₂N(R)₂, C₂₋₆ alkenyl, C₃₋₆ carbocycle and heterocycle;

R^{11} is selected from the group consisting of C_{3-6} carbocycle and heterocycle, wherein the C_{3-6} carbocycle and heterocycle are each optionally substituted with one or more R^{13} ;

R^{12} is selected from the group consisting of H, OH, C_{1-3} alkyl, and C_{2-3} alkenyl;

each R^{13} is selected from the group consisting of OH, oxo, halo, C_{1-6} alkyl, C_{1-6} alkoxy, C_{2-6} alkenyl, C_{1-6} alkylamino, di- $(C_{1-6}$ alkyl) amino, amino, amido, cyano, and nitro;

5 each R^{14} is independently selected from the group consisting of H, OH, C_{1-6} alkyl, and C_{2-3} alkenyl;

each $R^{14'}$ is independently selected from the group consisting of H, OH, C_{1-6} alkyl, and C_{2-3} alkenyl;

10 R^{15} is independently selected from the group consisting of H, OH, C_{1-6} alkyl, and C_{2-3} alkenyl;

each R is independently selected from the group consisting of C_{1-6} alkyl, C_{1-3} alkyl-aryl, C_{2-3} alkenyl, and H;

R^N is H, or C_{1-3} alkyl;

15 each R^* is independently selected from the group consisting of C_{1-18} alkyl, C_{2-18} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, $(CH_2)_qOR^*$, and H,

and each q is independently selected from 1, 2, and 3;

each R^M is independently selected from the group consisting of H, C_{1-6} alkyl and C_{2-6} alkenyl;

20 each R^{**} is independently selected from the group consisting of C_{3-15} alkyl and C_{3-15} alkenyl;

each R^{***} is selected from the group consisting of C_{1-15} alkyl and C_{2-15} alkenyl;

each R^* is independently selected from the group consisting of C_{1-12} alkyl and C_{2-12} alkenyl;

25 each R^{**} is independently selected from the group consisting of H, OH, C_{1-12} alkyl, C_{2-12} alkenyl, $(CH_2)_qOR^*$, and $(CH_2)_qOH$;

each Y is independently a C_{3-6} carbocycle;

each X is independently selected from the group consisting of F, Cl, Br, and I; and

m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

30 Embodiment 4. The compound of any one of the preceding embodiments, wherein at least one of M and M' is $-OC(O)O-$.

Embodiment 5. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -OC(O)N(R^M)-, or -N(R^M)C(O)O-.

Embodiment 6. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -NR^MC(O)NR^M-.

- 5 Embodiment 7. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -O-N=C(R^M)-.

Embodiment 8. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -O-M''-O-, in which each M'' is independently selected from C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, -B(R^{**})-, and -Si(R^{**})₂-.

- 10 Embodiment 9. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -O-M''-O-, and M'' is a C₁₋₃ alkyl.

Embodiment 10. The compound any one of the preceding embodiments, wherein M'' is methyl.

- Embodiment 11. The compound any one of the preceding embodiments, wherein M'' is
15 a branched C₁₋₃ alkyl.

Embodiment 12. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -O-M''-O-, and M'' is -(CH₂)_zC(O)-.

Embodiment 13. The compound of any one of the preceding embodiments, wherein z is 3.

- 20 Embodiment 14. The compound of any one of the preceding embodiments, wherein at

least one of M and M' is .

Embodiment 15. The compound of any one of the preceding embodiments, wherein at

least one of M and M' is .

Embodiment 16. The compound of any one of the preceding embodiments, wherein at least one of M and M' is -O-M''-O-, in which each M'' is independently selected from -B(R'')- and -Si(R'')₂-.

Embodiment 17. The compound of any one of the preceding embodiments, wherein
5 each R'' is a C₁₋₃ alkyl.

Embodiment 18. The compound of any one of the preceding embodiments, wherein each R'' is methyl.

Embodiment 19. The compound of any one of the preceding embodiments, wherein one of M and M' is -NR^MC(O)NR^M-.

10 Embodiment 20. The compound of any one of the preceding embodiments, wherein each R^M is H.

Embodiment 21. The compound of any one of the preceding embodiments wherein R¹ is R''M'R' and R' is a branched alkyl.

Embodiment 22. The compound of any one of the preceding embodiments, wherein R¹
15 is R''M'R' and R' is an alkenyl.

Embodiment 23. The compound of any one of the preceding embodiments, wherein R¹ is R''M'R' and R'' is a branched alkyl.

Embodiment 24. The compound of any one of the preceding embodiments, wherein R¹ is R''M'R' and R'' is an alkyl substituted with OH.

20 Embodiment 25. The compound of any one of the preceding embodiments, wherein R' is R*YR''' and Y is a cyclopropyl, cyclopentyl, or cyclohexyl.

Embodiment 26. The compound of any one of the preceding embodiments, wherein R' is R*YR''' and R''' is a C₂ alkyl, a C₃-alkyl, or a C₄ alkyl.

Embodiment 27. The compound of any one of the preceding embodiments, wherein the
25 compound has the following structure:

, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

Embodiment 28. The compound of any one of the preceding embodiments, wherein the compound has the following structure:

5 , wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

Embodiment 29. The compound of one of the preceding claims, wherein the compound has the following structure:

10 , wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

Embodiment 30. The compound of one of the preceding claims, wherein the compound has the following structure:

15 , wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

Embodiment 31. The compound of one of the preceding claims, wherein the compound has the following structure:

, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

- 5 Embodiment 32. The compound of any one of the preceding embodiments 1 or 2, wherein the compound has the following structure:

, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

- 10 Embodiment 33. The compound of any one of the preceding embodiments, wherein the compound has the following structure:

, wherein R'' is a linear or branched C₃-C₁₃ alkyl, optionally substituted with OH, and m is selected from 5, 6, 7, 8, and 9.

Embodiment 34. A compound of Formula (I-Y1):

- 15 (I-Y1), or its N-oxide, or a salt or isomer thereof, wherein:

R^1 is selected from the group consisting of C_{5-30} alkyl, C_{5-20} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^{**}M^*R^*$;

R^2 and R^3 are independently selected from the group consisting of H, C_{1-14} alkyl, C_{2-14} alkenyl, $-R^*YR^{**}$, $-YR^{**}$, and $-R^*OR^{**}$, or R^2 and R^3 , together with the atom to which they are attached, form a heterocycle or carbocycle;

R^4 is selected from the group consisting of hydrogen, a C_{3-6} carbocycle, $-(CH_2)_nQ$, $-(CH_2)_nCHQR$, $-(CH_2)_nC(R^{12})_2(CH_2)_{n-2}Q$, $-CHQR$, $-CQ(R)_2$, $-C(O)NQR$ and unsubstituted C_{1-6} alkyl, where Q is selected from a carbocycle, heterocycle, $-OR$, $-O(CH_2)_nN(R)_2$, $-C(O)OR$, $-OC(O)R$, $-CX_3$, $-CX_2H$, $-CXH_2$, $-CN$, $-N(R)_2$, $-C(O)N(R)_2$, $-N(R)C(O)R$, $-N(R)S(O)_2R$, $-N(R)C(O)N(R)_2$, $-N(R)C(S)N(R)_2$, $-N(R)R^8$, $-N(R)S(O)_2R^8$, $-O(CH_2)_nOR$, $-N(R)C(=NR^9)N(R)_2$, $-N(R)C(=CHR^9)N(R)_2$, $-OC(O)N(R)_2$, $-N(R)C(O)OR$, $-N(OR)C(O)R$, $-N(OR)S(O)_2R$, $-N(OR)C(O)OR$, $-N(OR)C(O)N(R)_2$, $-N(OR)C(S)N(R)_2$, $-N(OR)C(=NR^9)N(R)_2$, $-N(OR)C(=CHR^9)N(R)_2$, $-C(=NR^9)N(R)_2$, $-C(=NR^9)R$, $-C(O)N(R)OR$, $-(CH_2)_nN(R)_2$, $-C(R)N(R)_2C(O)OR$, $NC(R)=R^{11}$, $N(C=NR^{15})R^{11}$, $NRC(C(O)N R^{14}R^{14'})_2$, $-$

$NRC(O)(CH_2)_pC(O)N R^{14}R^{14'}$, and , wherein A is C_{6-10} aryl or a heterocycle; and

each o is independently selected from 1, 2, 3, and 4; p is 0, 1, 2, 3, or 4; q is 1, 2, 3, or 4; and each n is independently selected from 1, 2, 3, 4, and 5; or

X^a and X^b are each independently O or S;

R^{10} is selected from the group consisting of H, halo, $-OH$, R, $-N(R)_2$, $-CN$, $-N_3$, $-C(O)OH$, $-C(O)OR$, $-OC(O)R$, $-OR$, $-SR$, $-S(O)R$, $-S(O)OR$, $-S(O)_2OR$, $-NO_2$, $-S(O)_2N(R)_2$, $-N(R)S(O)_2R$, $-NH(CH_2)_{t1}N(R)_2$, $-NH(CH_2)_{p1}O(CH_2)_{q1}N(R)_2$, $-NH(CH_2)_{s1}OR$, $-N((CH_2)_{s1}OR)_2$, $-N(R)$ -carbocycle, $-N(R)$ -heterocycle, $-N(R)$ -aryl, $-$

- N(R)-heteroaryl, -N(R)(CH₂)_{t1}-carbocycle, -N(R)(CH₂)_{t1}-heterocycle, -N(R)(CH₂)_{t1}-aryl, -N(R)(CH₂)_{t1}-heteroaryl, a carbocycle, a heterocycle, aryl and heteroaryl;
- n₂ is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10;
- r is 0 or 1;
- 5 t¹ is selected from 1, 2, 3, 4, and 5;
- p¹ is selected from 1, 2, 3, 4, and 5;
- q¹ is selected from 1, 2, 3, 4, and 5; and
- s¹ is selected from 1, 2, 3, 4, and 5;
- each R⁵ is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;
- 10 each R⁶ is independently selected from the group consisting of OH, C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;
- M' is selected from -OC(O)O-, -C(O)O-, -OC(O)-, -OC(O)-M''-C(O)O-, -OC(O)-NR^M-C(O)O-, -O-M''-O-, -C(O)N(R^M)-, -N(R^M)C(O)-, -OC(O)N(R^M)-, -N(R^M)C(O)O-, -NR^MC(O)NR^M-, -O-N=C(R^M)-, -C(O)-, -C(S)-, -C(S)S-, -SC(S)-, -CH(OH)-, -P(O)(OR^M)O-, -S(O)₂-, -S-S-, -SO-, -OS-, S(R^M)₂O-, -O-S(R^M)₂-, -S(O)O-, -OS(O)-, an aryl group, and a heteroaryl group, in which M'' is a bond, -(CH₂)_zC(O)-, C₁₋₁₃ alkyl, C₂₋₁₃ alkenyl, -B(R^{**})-, -Si(R^{**})₂-, -S(R^{**})₂-, or -S(O)-, wherein z is 1, 2, 3, or 4;
- 15 R⁷ is selected from the group consisting of C₁₋₃ alkyl, C₂₋₃ alkenyl, and H;
- 20 R⁸ is selected from the group consisting of C₃₋₆ carbocycle and heterocycle;
- R⁹ is selected from the group consisting of H, CN, NO₂, C₁₋₆ alkyl, -OR, -S(O)₂R, -S(O)₂N(R)₂, C₂₋₆ alkenyl, C₃₋₆ carbocycle and heterocycle;
- R¹¹ is selected from the group consisting of C₃₋₆ carbocycle and heterocycle, wherein the C₃₋₆ carbocycle and heterocycle are each optionally substituted with one or more R¹³;
- 25 R¹² is selected from the group consisting of H, OH, C₁₋₃ alkyl, and C₂₋₃ alkenyl;
- each R¹³ is selected from the group consisting of OH, oxo, halo, C₁₋₆ alkyl, C₁₋₆ alkoxy, C₂₋₆ alkenyl, C₁₋₆ alkylamino, di-(C₁₋₆ alkyl) amino, amino, amido, cyano, and nitro;
- each R¹⁴ is independently selected from the group consisting of H, OH, C₁₋₆ alkyl, and C₂₋₃ alkenyl;
- 30 each R^{14*} is independently selected from the group consisting of H, OH, C₁₋₆ alkyl, and C₂₋₃ alkenyl;

- R^{15} is independently selected from the group consisting of H, OH, C₁₋₆ alkyl, and C₂₋₃ alkenyl;
- each R is independently selected from the group consisting of C₁₋₆ alkyl, C₁₋₃ alkyl-aryl, C₂₋₃ alkenyl, and H;
- 5 R^N is H, or C₁₋₃ alkyl;
- each R' is independently selected from the group consisting of C₁₋₁₈ alkyl, C₂₋₁₈ alkenyl, $-R^*YR^{**}$, $-YR^{**}$, $(CH_2)_qOR^*$, and H,
- and each q is independently selected from 1, 2, and 3;
- each R^M is independently selected from the group consisting of H, C₁₋₆ alkyl and
- 10 C₂₋₆ alkenyl;
- each R'' is independently selected from the group consisting of C₃₋₁₅ alkyl and C₃₋₁₅ alkenyl;
- each R^{***} is selected from the group consisting of C₁₋₁₅ alkyl and C₂₋₁₅ alkenyl;
- each R^* is independently selected from the group consisting of C₁₋₁₂ alkyl and
- 15 C₂₋₁₂ alkenyl;
- each R^{**} is independently selected from the group consisting of H, OH, C₁₋₁₂ alkyl, C₂₋₁₂ alkenyl, $(CH_2)_qOR^*$, and $(CH_2)_qOH$;
- each Y is independently a C₃₋₆ carbocycle;
- each X is independently selected from the group consisting of F, Cl, Br, and I; and
- 20 m is selected from 5, 6, 7, 8, 9, 10, 11, 12, and 13.

Embodiment 35. The compound of any one of the preceding embodiments, wherein the

compound has the following structure: , wherein each R'' independently is selected from H, OH, and C₁₋₆ alkyl, l is selected from 2, 3, 4, 5, and 6, and m is selected from 5, 6, 7, 8, and 9.

- 25 Embodiment 36. The compound of any one of the preceding embodiments, wherein R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is $-N(R)_2$, wherein each R is independently selected from the group consisting of C_{1-6} alkyl, C_{2-3} alkenyl, and H;

Embodiment 37. A compound of Formula (A):

(A), or its N-oxide, or a salt or isomer thereof, wherein

m is selected from 5, 6, 7, 8, and 9;

R^2 and R^3 are each independently selected from the group consisting of H, C_{1-14} alkyl, and C_{2-14} alkenyl;

R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is $-N(R)_2$, wherein each R is independently selected from the group consisting of C_{1-6} alkyl, C_{2-3} alkenyl, and H;

M and M' are each independently selected from $-OC(O)O-$ and $-C(O)O-$;

wherein at least one of M and M' is $-OC(O)O-$;

R^a is C_{1-18} alkyl or C_{2-18} alkenyl; and

R'' is a C_3 - C_{13} alkyl, optionally substituted with OH.

Embodiment 38. The compound of any one of the preceding embodiments, wherein R''

is selected from ; wherein

denotes a point of attachment with N, and denotes a point of attachment with

M.

Embodiment 39. The compound of any one of the preceding embodiments, wherein the

Embodiment 40. The compound of any one of the preceding embodiments, wherein $R^{a'}$

$R^{a\alpha}$, $R^{a\beta}$, and $R^{a\gamma}$ are each independently selected from the group consisting of H, C₁₋₁₂ alkyl, and C₂₋₁₂ alkenyl, wherein at least one of $R^{a\alpha}$, $R^{a\beta}$, and $R^{a\gamma}$ is selected from the group consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl; and

R' is a C₁₋₁₂ alkyl or C₂₋₁₂ alkenyl.

Embodiment 41. The compound of any one of the preceding embodiments, wherein $R^{a\beta}$ and $R^{a\gamma}$ are each H and $R^{a\alpha}$ is C₁₋₆ alkyl.

Embodiment 42. The compound of any one of the preceding embodiments, wherein $R^{a\alpha}$ and $R^{a\gamma}$ are each H and $R^{a\beta}$ is C₁₋₆ alkyl.

Embodiment 43. The compound of any one of the preceding embodiments, wherein $R^{a\beta}$ is C₂ alkyl.

Embodiment 44. The compound of any one of the preceding embodiments, wherein $R^{a\alpha}$ and $R^{a\beta}$ are each H and $R^{a\gamma}$ is C₁₋₆ alkyl.

Embodiment 45. The compound of any one of the preceding embodiments, wherein $R^{a\gamma}$ is a C₅ or a C₆ alkyl.

Embodiment 46. The compound of any one of the preceding embodiments wherein R^3 is a C_5 or a C_6 alkyl.

Embodiment 47. The compound of any one of the preceding embodiments, wherein the

compound has the following structure:

(B).

5 Embodiment 48. The compound of any one of the preceding embodiments, wherein R^4 is $-(CH_2)_nOH$.

Embodiment 49. The compound of any one of the preceding embodiments, wherein R^4 is $-(CH_2)_2OH$.

Embodiment 50. The compound of any one of the preceding embodiments, wherein R^4

Embodiment 51. The compound of any one of the preceding embodiments, wherein R^4

Embodiment 52. The compound of any one of the preceding embodiments, wherein n_2 is 2 or 4.

15 Embodiment 53. A compound selected from:

Embodiment 54. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid.

Embodiment 55. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, a PEG lipid, and one or more therapeutic and/or prophylactic agents.

Embodiment 56. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising the compound in an amount from about 40% to about 60%.

Embodiment 57. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising the phospholipid in an amount from about 0% to about 20%.

Embodiment 58. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising the structural lipid in an amount from about 30% to about 50%.

- 5 Embodiment 59. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising the PEG lipid in an amount from about 0% to about 5%.

Embodiment 60. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising about 40 mol % to about 60 mol % of the compound of any one of the preceding embodiments, about 0 mol % to about 20 mol % phospholipid, about 30 mol %
10 to about 50 mol % structural lipid, and about 0 mol % to about 5 mol % PEG lipid.

Embodiment 61. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising about 30 mol % to about 60 mol % of the compound of any one of the preceding embodiments, about 0 mol % to about 30 mol % phospholipid, about 18.5 mol % to about 48.5 mol % structural lipid, and about 0 mol % to about 10 mol % PEG lipid.

- 15 Embodiment 62. The loaded LNP of any one of the preceding embodiments, wherein the one or more therapeutic and/or prophylactic agents is a polynucleotide or a polypeptide.

Embodiment 63. The loaded LNP of any one of the preceding embodiments, wherein the one or more therapeutic and/or prophylactic agents is a nucleic acid.

- Embodiment 64. The loaded LNP of any one of the preceding embodiments, wherein
20 the one or more therapeutic and/or prophylactic agents is selected from the group consisting of a ribonucleic acid (RNA) and a deoxyribonucleic acid (DNA).

- Embodiment 65. The loaded LNP of any one of the preceding embodiments, wherein the DNA is selected from the group consisting of a double-stranded DNA, a single-stranded DNA (ssDNA), a partially double-stranded DNA, a triple stranded DNA, and a partially
25 triple-stranded DNA.

Embodiment 66. The loaded LNP of any one of the preceding embodiments, wherein the DNA is selected from the group consisting of a circular DNA, a linear DNA, and mixtures thereof.

Embodiment 67. The loaded LNP of any one of the preceding embodiments, wherein
5 the one or more therapeutic and/or prophylactic agents is selected from the group consisting of a plasmid expression vector, a viral expression vector, and mixtures thereof.

Embodiment 68. The loaded LNP of any one of the preceding embodiments, wherein the one or more therapeutic and/or prophylactic agents is a RNA.

Embodiment 69. The loaded LNP of any one of the preceding embodiments, wherein
10 the RNA is selected from the group consisting of a single-stranded RNA, a double-stranded RNA (dsRNA), a partially double-stranded RNA, and mixtures thereof.

Embodiment 70. The loaded LNP of any one of the preceding embodiments, wherein the RNA is selected from the group consisting of a circular RNA, a linear RNA, and mixtures thereof.

Embodiment 71. The loaded LNP of any one of the preceding embodiments, wherein
15 the RNA is selected from the group consisting of is selected from the group consisting of a short interfering RNA (siRNA), an asymmetrical interfering RNA (aiRNA), a RNA interference (RNAi) molecule, a microRNA (miRNA), an antagomir, an antisense RNA, a ribozyme, a Dicer-substrate RNA (dsRNA), a small hairpin RNA (shRNA), a messenger
20 RNA (mRNA), and mixtures thereof.

Embodiment 72. The loaded LNP of any one of the preceding embodiments, wherein the RNA is an mRNA.

Embodiment 73. The loaded LNP of any one of the preceding embodiments, wherein the mRNA is a modified mRNA (mmRNA).

Embodiment 74. The loaded LNP of any one of the preceding embodiments, wherein
25 the mRNA incorporates a micro-RNA binding site (miR binding site).

Embodiment 75. The loaded LNP of any one of the preceding embodiments, wherein the mRNA includes one or more of a stem loop, a chain terminating nucleoside, a polyA sequence, a polyadenylation signal, and/or a 5' cap structure.

- Embodiment 76. The empty LNP or loaded LNP of any one of the preceding
- 5 embodiments, wherein the phospholipid is selected from the group consisting of
 - 1,2-dilinoleoyl-sn-glycero-3-phosphocholine (DLPC),
 - 1,2-dimyristoyl-sn-glycero-phosphocholine (DMPC),
 - 1,2-dioleoyl-sn-glycero-3-phosphocholine (DOPC),
 - 1,2-dipalmitoyl-sn-glycero-3-phosphocholine (DPPC),
 - 10 1,2-distearoyl-sn-glycero-3-phosphocholine (DSPC),
 - 1,2-diundecanoyl-sn-glycero-phosphocholine (DUPC),
 - 1-palmitoyl-2-oleoyl-sn-glycero-3-phosphocholine (POPC),
 - 1,2-di-O-octadecenyl-sn-glycero-3-phosphocholine (18:0 Diether PC),
 - 1-oleoyl-2-cholesterylhemisuccinoyl-sn-glycero-3-phosphocholine (OChemPC),
 - 15 1-hexadecyl-sn-glycero-3-phosphocholine (C16 Lyso PC),
 - 1,2-dilinolenoyl-sn-glycero-3-phosphocholine,
 - 1,2-diarachidonoyl-sn-glycero-3-phosphocholine,
 - 1,2-didocosahexaenoyl-sn-glycero-3-phosphocholine, 1,2-dioleoyl-sn-glycero-3-phosphoetha
 - 20 nolamine (DOPE), 1,2-diphytanoyl-sn-glycero-3-phosphoethanolamine (ME 16.0 PE),
 - 1,2-distearoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-dilinoleoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-dilinolenoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-diarachidonoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-didocosahexaenoyl-sn-glycero-3-phosphoethanolamine,
 - 25 1,2-dioleoyl-sn-glycero-3-phospho-rac-(1-glycerol) sodium salt (DOPG), sphingomyelin, and
- mixtures thereof.

Embodiment 77. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the phospholipid is 1,2-distearoyl-sn-glycero-3-phosphocholine (DSPC).

Embodiment 78. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the structural lipid is selected from the group consisting of cholesterol, fecosterol, sitosterol, ergosterol, campesterol, stigmasterol, brassicasterol, tomatidine, ursolic acid, alpha-tocopherol, and mixtures thereof.

5 Embodiment 79. The empty LNP or loaded LNP of any one of the preceding

embodiments, wherein the structural lipid is  (SL-1) or a salt thereof.

Embodiment 80. The empty LNP or loaded LNP of any one of the preceding

embodiments, wherein the structural lipid is cholesterol:  or a salt thereof.

10

Embodiment 81. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the PEG lipid is selected from the group consisting of a PEG-modified phosphatidylethanolamine, a PEG-modified phosphatidic acid, a PEG-modified ceramide, a PEG-modified dialkylamine, a PEG-modified diacylglycerol, and a PEG-modified

15 dialkylglycerol, and mixtures thereof.

Embodiment 82. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the PEG lipid is selected from the group consisting of 1,2-dimyristoyl-sn-glycerol methoxypolyethylene glycol (PEG-DMG), 1,2-distearoyl-sn-glycero-3-phosphoethanolamine-N-[amino(polyethylene glycol)] (PEG-DSPE), PEG-disteryl glycerol (PEG-DSG), PEG-dipalmitoleyl, PEG-dioleyl, PEG-distearyl, PEG-diacylglycamide (PEG-DAG), PEG-dipalmitoyl phosphatidylethanolamine (PEG-DPPE), or PEG-1,2-dimyristyloxypropyl-3-amine (PEG-c-DMA).

20

Embodiment 83. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the PEG lipid is PEG-DMG.

Embodiment 84. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the PEG lipid is a compound of Formula (PL-I):

or a salt thereof, wherein:

$\text{R}^{3\text{PL}1}$ is $\text{---OR}^{\text{OPL}1}$;

$\text{R}^{\text{OPL}1}$ is hydrogen, optionally substituted alkyl, or an oxygen protecting group;

$r^{\text{PL}1}$ is an integer between 1 and 100, inclusive;

10 L^1 is optionally substituted C_{1-10} alkylene, wherein at least one methylene of the optionally substituted C_{1-10} alkylene is independently replaced with optionally substituted carbocyclylene, optionally substituted heterocyclylene, optionally substituted arylene, optionally substituted heteroarylene, O, $\text{N}(\text{R}^{\text{NPL}1})$, S, $\text{C}(\text{O})$, $\text{C}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$, $\text{NR}^{\text{NPL}1}\text{C}(\text{O})$, -
 $\text{C}(\text{O})\text{O}$, $\text{OC}(\text{O})$, $\text{OC}(\text{O})\text{O}$, $\text{OC}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$, $\text{NR}^{\text{NPL}1}\text{C}(\text{O})\text{O}$, or $\text{NR}^{\text{NPL}1}\text{C}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$;

15 D is a moiety obtained by click chemistry or a moiety cleavable under physiological conditions;

$m^{\text{PL}1}$ is 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, or 10;

20 each instance of L^2 is independently a bond or optionally substituted C_{1-6} alkylene, wherein one methylene unit of the optionally substituted C_{1-6} alkylene is optionally replaced with O, $\text{N}(\text{R}^{\text{NPL}1})$, S, $\text{C}(\text{O})$, $\text{C}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$, $\text{NR}^{\text{NPL}1}\text{C}(\text{O})$, $\text{C}(\text{O})\text{O}$, $\text{OC}(\text{O})$, $\text{OC}(\text{O})\text{O}$, -
 $\text{OC}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$, $\text{NR}^{\text{NPL}1}\text{C}(\text{O})\text{O}$, or $\text{NR}^{\text{NPL}1}\text{C}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$;

25 each instance of $\text{R}^{2\text{SL}}$ is independently optionally substituted C_{1-30} alkyl, optionally substituted C_{1-30} alkenyl, or optionally substituted C_{1-30} alkynyl; optionally wherein one or more methylene units of $\text{R}^{2\text{SL}}$ are independently replaced with optionally substituted carbocyclylene, optionally substituted heterocyclylene, optionally substituted arylene, optionally substituted heteroarylene, $\text{N}(\text{R}^{\text{NPL}1})$, O, S, $\text{C}(\text{O})$, $\text{C}(\text{O})\text{N}(\text{R}^{\text{NPL}1})$, $\text{NR}^{\text{NPL}1}\text{C}(\text{O})$, -

- $\text{NR}^{\text{NPL1}}\text{C}(\text{O})\text{N}(\text{R}^{\text{NPL1}})$, $\text{C}(\text{O})\text{O}$, $\text{OC}(\text{O})$, $\text{OC}(\text{O})\text{O}$, $\text{OC}(\text{O})\text{N}(\text{R}^{\text{NPL1}})$, $\text{NR}^{\text{NPL1}}\text{C}(\text{O})\text{O}$, $\text{C}(\text{O})\text{S}$, -
 $\text{SC}(\text{O})$, $\text{C}(=\text{NR}^{\text{NPL1}})$, $\text{C}(=\text{NR}^{\text{NPL1}})\text{N}(\text{R}^{\text{NPL1}})$, $\text{NR}^{\text{NPL1}}\text{C}(=\text{NR}^{\text{NPL1}})$, -
 $\text{NR}^{\text{NPL1}}\text{C}(=\text{NR}^{\text{NPL1}})\text{N}(\text{R}^{\text{NPL1}})$, $\text{C}(\text{S})$, $\text{C}(\text{S})\text{N}(\text{R}^{\text{NPL1}})$, $\text{NR}^{\text{NPL1}}\text{C}(\text{S})$, $\text{NR}^{\text{NPL1}}\text{C}(\text{S})\text{N}(\text{R}^{\text{NPL1}})$, $\text{S}(\text{O})$,
 $\text{OS}(\text{O})$, $\text{S}(\text{O})\text{O}$, $\text{OS}(\text{O})\text{O}$, $\text{OS}(\text{O})_2$, $\text{S}(\text{O})_2\text{O}$, $\text{OS}(\text{O})_2\text{O}$, $\text{N}(\text{R}^{\text{NPL1}})\text{S}(\text{O})$, $\text{S}(\text{O})\text{N}(\text{R}^{\text{NPL1}})$, -
 5 $\text{N}(\text{R}^{\text{NPL1}})\text{S}(\text{O})\text{N}(\text{R}^{\text{NPL1}})$, $\text{OS}(\text{O})\text{N}(\text{R}^{\text{NPL1}})$, $\text{N}(\text{R}^{\text{NPL1}})\text{S}(\text{O})\text{O}$, $\text{S}(\text{O})_2$, $\text{N}(\text{R}^{\text{NPL1}})\text{S}(\text{O})_2$, -
 $\text{S}(\text{O})_2\text{N}(\text{R}^{\text{NPL1}})$, $\text{N}(\text{R}^{\text{NPL1}})\text{S}(\text{O})_2\text{N}(\text{R}^{\text{NPL1}})$, $\text{OS}(\text{O})_2\text{N}(\text{R}^{\text{NPL1}})$, or $\text{N}(\text{R}^{\text{NPL1}})\text{S}(\text{O})_2\text{O}$;
 each instance of R^{NPL1} is independently hydrogen, optionally substituted alkyl, or a
 nitrogen protecting group;
 Ring B is optionally substituted carbocyclyl, optionally substituted heterocyclyl,
 10 optionally substituted aryl, or optionally substituted heteroaryl; and
 p^{SL} is 1 or 2.

Embodiment 85. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein the PEG lipid is a compound of Formula (PL-I-OH):

- 15 Embodiment 86. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein the PEG lipid is a compound of Formula (PL-II-OH):

- R^{3PEG} is $-\text{OR}^{\text{O}}$;
 R^{O} is hydrogen, C_{1-6} alkyl or an oxygen protecting group;
 r^{PEG} is an integer between 1 and 100;
 R^{5PEG} is C_{10-40} alkyl, C_{10-40} alkenyl, or C_{10-40} alkynyl; and optionally one or more
 methylene groups of R^{5PEG} are independently replaced with C_{3-10} carbocyclylene, 4 to 10
 membered heterocyclylene, C_{6-10} arylene, 4 to 10 membered heteroarylene, $-\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{O}-$,
 $-\text{S}-$, $-\text{C}(\text{O})-$, $-\text{C}(\text{O})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{NR}^{\text{NPEG}}\text{C}(\text{O})-$, $-\text{NR}^{\text{NPEG}}\text{C}(\text{O})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{C}(\text{O})\text{O}-$, -
 20 $\text{OC}(\text{O})-$, $-\text{OC}(\text{O})\text{O}-$, $-\text{OC}(\text{O})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{NR}^{\text{NPEG}}\text{C}(\text{O})\text{O}-$, $-\text{C}(\text{O})\text{S}-$, $-\text{SC}(\text{O})-$, -
 $\text{C}(=\text{NR}^{\text{NPEG}})-$, $-\text{C}(=\text{NR}^{\text{NPEG}})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{NR}^{\text{NPEG}}\text{C}(=\text{NR}^{\text{NPEG}})-$, -
 $\text{NR}^{\text{NPEG}}\text{C}(=\text{NR}^{\text{NPEG}})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{C}(\text{S})-$, $-\text{C}(\text{S})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{NR}^{\text{NPEG}}\text{C}(\text{S})-$, -
 $\text{NR}^{\text{NPEG}}\text{C}(\text{S})\text{N}(\text{R}^{\text{NPEG}})-$, $-\text{S}(\text{O})-$, $-\text{OS}(\text{O})-$, $-\text{S}(\text{O})\text{O}-$, $-\text{OS}(\text{O})\text{O}-$, $-\text{OS}(\text{O})_2-$, $-\text{S}(\text{O})_2\text{O}-$, -
 25

OS(O)₂O-, -N(R^{NPEG})S(O)-, -S(O)N(R^{NPEG})-, -N(R^{NPEG})S(O)N(R^{NPEG})-, -
 OS(O)N(R^{NPEG})-, -N(R^{NPEG})S(O)O-, -S(O)₂-, -N(R^{NPEG})S(O)₂-, -S(O)₂N(R^{NPEG})-, -
 N(R^{NPEG})S(O)₂N(R^{NPEG})-, -OS(O)₂N(R^{NPEG})-, or -N(R^{NPEG})S(O)₂O-; and

each instance of R^{NPEG} is independently hydrogen, C₁₋₆ alkyl, or a nitrogen protecting
 5 group.

Embodiment 87. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein in the PEG lipid of Formula (PL-II-OH), r is an integer between 40
 and 50.

Embodiment 88. The empty LNP or loaded LNP of any one of the preceding
 10 embodiments, wherein in the PEG lipid of Formula (PL-II-OH), r is 45.

Embodiment 89. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein in the PEG lipid of Formula (PL-II-OH), R⁵ is C₁₇ alkyl.

Embodiment 90. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein the PEG lipid is a compound of Formula (PL-II):

Embodiment 91. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein the PEG lipid is a compound of Formula (PEG-1):

20 Embodiment 92. The empty LNP or loaded LNP of any one of the preceding
 embodiments, wherein the PEG lipid is a compound of Formula (PL-III):

(PL-III), or a salt or isomer thereof, wherein

s^{PL1} is an integer between 1 and 100.

Embodiment 93. The empty LNP or loaded LNP of any one of the preceding embodiments, wherein the PEG lipid is a compound of following formula:

(PEG_{2k}-DMG).

5

Embodiment 94. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the structural lipid is cholesterol.

Embodiment 95. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG_{2k}-DMG.

Embodiment 96. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG-1.

Embodiment 97. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG_{2k}-DMG.

Embodiment 98. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG-1.

Embodiment 99. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid,

wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG_{2k}-DMG.

Embodiment 100. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid,
5 wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG-1.

Embodiment 101. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the structural lipid is cholesterol, and one or more
10 therapeutic and/or prophylactic agents.

Embodiment 102. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents.

Embodiment 103. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the structural lipid is cholesterol and the PEG lipid is PEG-1, and one or more
15 therapeutic and/or prophylactic agents.

Embodiment 104. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG_{2k}-DMG, and one or more
20 therapeutic and/or prophylactic agents.

Embodiment 105. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid, wherein the phospholipid is DSPC and the PEG lipid is PEG-1, and one or more therapeutic
25 and/or prophylactic agents.

Embodiment 106. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid,

wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG_{2k}-DMG, and one or more therapeutic and/or prophylactic agents.

Embodiment 107. A loaded lipid nanoparticle (loaded LNP) comprising a compound of any one of the preceding embodiments, a phospholipid, a structural lipid, and a PEG lipid,
5 wherein the phospholipid is DSPC, the structural lipid is cholesterol, and the PEG lipid is PEG-1, and one or more therapeutic and/or prophylactic agents.

Embodiment 108. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising DSPC in an amount from about 0% to about 20%.

Embodiment 109. The empty LNP or loaded LNP of any one of the preceding
10 embodiments, comprising cholesterol in an amount from about 30% to about 50%.

Embodiment 110. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising PEG_{2k}-DMG in an amount from about 0% to about 5%.

Embodiment 111. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising PEG-1 in an amount from about 0% to about 5%.

15 Embodiment 112. The empty LNP or loaded LNP of any one of the preceding embodiments, comprising about 40 mol % to about 60 mol % of the compound of any one of the preceding embodiments, about 0 mol % to about 20 mol % DSPC, about 30 mol % to about 50 mol % cholesterol, and about 0 mol % to about 5 mol % PEG_{2k}-DMG.

Embodiment 113. The empty LNP or loaded LNP of any one of the preceding
20 embodiments, comprising about 40 mol % to about 60 mol % of the compound of any one of the preceding embodiments, about 0 mol % to about 20 mol % DSPC, about 30 mol % to about 50 mol % cholesterol, and about 0 mol % to about 5 mol % PEG-1.

Embodiment 114. The loaded LNP of any one of the preceding embodiments the encapsulation efficiency of the therapeutic and/or prophylactic agent is between 80% and
25 100%.

Embodiment 115. The loaded LNP of any one of the preceding embodiments, wherein the wt/wt ratio of the lipid component to the mRNA is from about 10:1 to about 60:1.

Embodiment 116. The loaded LNP of any one of the preceding embodiments, wherein the wt/wt ratio of the lipid component to the mRNA is about 20:1.

Embodiment 117. The loaded LNP of any one of the preceding embodiments, wherein the N:P ratio is from about 5:1 to about 8:1.

- 5 Embodiment 118. A pharmaceutical composition comprising the loaded LNP of any one of the preceding embodiments and a pharmaceutically acceptable carrier.

Embodiment 119. The pharmaceutical composition of any one of the preceding embodiments, further comprising a cryoprotectant, a buffer, or a combination thereof.

- 10 Embodiment 120. The pharmaceutical composition of any one of the preceding embodiments, wherein the cryoprotectant comprises sucrose.

Embodiment 121. The pharmaceutical composition of any one of the preceding embodiments, wherein the cryoprotectant comprises sodium acetate.

Embodiment 122. The pharmaceutical composition of any one of the preceding embodiments, wherein the cryoprotectant comprises sucrose and sodium acetate.

- 15 Embodiment 123. The pharmaceutical composition of any one of the preceding embodiments, wherein the buffer is selected from the group consisting of an acetate buffer, a citrate buffer, a phosphate buffer, and a tris buffer.

- 20 Embodiment 124. A method of delivering a therapeutic and/or prophylactic agent to a cell within a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding embodiments.

Embodiment 125. A method of specifically delivering a therapeutic and/or prophylactic agent to an organ of a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding embodiments.

- 25 Embodiment 126. A method for the enhanced delivery of a therapeutic and/or prophylactic to a target tissue of a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding embodiments.

Embodiment 127. A method of producing a polypeptide of interest in a cell within a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding embodiments.

Embodiment 128. A method of treating a disease or disorder in a subject in need thereof,
5 the method comprising administering to the subject a therapeutically effective amount of the loaded LNP of any one of the preceding embodiments.

Embodiment 129. Use of a loaded LNP of any one of the preceding embodiments, in the manufacture of a medicament for delivering a therapeutic and/or prophylactic agent to a cell within a subject.

10 Embodiment 130. Use of a loaded LNP of any one of the preceding embodiments, in the manufacture of a medicament for specifically delivering a therapeutic and/or prophylactic agent to an organ of a subject.

Embodiment 131. Use of a loaded LNP of any one of the preceding embodiments, in the manufacture of a medicament for the enhanced delivery of a therapeutic and/or prophylactic
15 to a target tissue of a subject.

Embodiment 132. Use of a loaded LNP of any one of the preceding embodiments, in the manufacture of a medicament for producing a polypeptide of interest in a cell within a subject.

Embodiment 133. Use of a loaded LNP of any one of the preceding embodiments, in the
20 manufacture of a medicament for treating a disease or disorder in a subject in need thereof.

Embodiment 134. A loaded LNP of any one of the preceding embodiments, for use in delivering a therapeutic and/or prophylactic agent to a cell within a subject, wherein the delivering comprises administering a therapeutically effective amount of the loaded LNP to the subject.

25 Embodiment 135. A loaded LNP of any one of the preceding embodiments, for use in specifically delivering a therapeutic and/or prophylactic agent to an organ of a subject,

wherein the delivering comprises administering a therapeutically effective amount of the loaded LNP to the subject.

Embodiment 136. A loaded LNP of any one of the preceding embodiments, for use in the enhanced delivery of a therapeutic and/or prophylactic to a target tissue of a subject, wherein
5 the use comprises administering to the subject the loaded LNP of any one of the preceding embodiments.

Embodiment 137. A loaded LNP of any one of the preceding embodiments, for use in producing a polypeptide of interest in a cell within a subject, the use comprises administering to the subject the loaded LNP of any one of the preceding embodiments.

10 Embodiment 138. A loaded LNP of any one of the preceding embodiments, for use in the treatment of a disease or disorder in a subject in need thereof, wherein the treatment comprises administering a therapeutically effective amount of the loaded LNP to a subject.

Embodiment 139. A method of delivering a therapeutic and/or prophylactic agent to a cell within a subject, the method comprising administering to the subject the pharmaceutical
15 composition of any one of the preceding embodiments.

Embodiment 140. A method of specifically delivering a therapeutic and/or prophylactic agent to an organ of a subject, the method comprising administering to the subject the pharmaceutical composition of any one of the preceding embodiments.

Embodiment 141. A method for the enhanced delivery of a therapeutic and/or
20 prophylactic to a target tissue of a subject, the method comprising administering to the subject the pharmaceutical composition of any one of the preceding embodiments.

Embodiment 142. A method of producing a polypeptide of interest in a cell within a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding embodiments.

25 Embodiment 143. A method of treating a disease or disorder in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of the pharmaceutical composition of any one of the preceding embodiments.

Embodiment 144. Use of a pharmaceutical composition of any one of the preceding embodiments, in the manufacture of a medicament for delivering a therapeutic and/or prophylactic agent to a cell within a subject.

5 Embodiment 145. Use of a pharmaceutical composition of any one of the preceding embodiments, in the manufacture of a medicament for specifically delivering a therapeutic and/or prophylactic agent to an organ of a subject.

Embodiment 146. Use of a pharmaceutical composition of any one of the preceding embodiments, in the manufacture of a medicament for the enhanced delivery of a therapeutic and/or prophylactic to a target tissue of a subject, the method comprising administering to
10 the subject the pharmaceutical composition of any one of the preceding embodiments.

Embodiment 147. Use of a pharmaceutical composition of any one of the preceding embodiments, in the manufacture of a medicament for producing a polypeptide of interest in a cell within a subject.

Embodiment 148. Use of a pharmaceutical composition of any one of the preceding
15 embodiments, in the manufacture of a medicament for treating a disease or disorder in a subject in need thereof.

Embodiment 149. A pharmaceutical composition of any one of the preceding embodiments, for use in delivering a therapeutic and/or prophylactic agent to a cell within a subject, wherein the delivering comprises administering a therapeutically effective amount of
20 the pharmaceutical composition to the subject.

Embodiment 150. A pharmaceutical composition of any one of the preceding embodiments, for use in specifically delivering a therapeutic and/or prophylactic agent to an organ of a subject, wherein the delivering comprises administering a therapeutically effective amount of the pharmaceutical composition to the subject.

25 Embodiment 151. A pharmaceutical composition of any one of the preceding embodiments, for use in the enhanced delivery of a therapeutic and/or prophylactic to a target tissue of a subject, wherein the use comprises administering to the subject the pharmaceutical composition of any one of the preceding embodiments.

Embodiment 152. A pharmaceutical composition of any one of the preceding embodiments, for use in producing a polypeptide of interest in a cell within a subject, the use comprises administering to the subject the pharmaceutical composition of any one of the preceding embodiments

- 5 Embodiment 153. A pharmaceutical composition of any one of the preceding embodiments, for use in the treatment of a disease or disorder in a subject in need thereof, wherein the treatment comprises administering a therapeutically effective amount of the pharmaceutical composition to a subject.

- Embodiment 154. The method, use, or loaded LNP or pharmaceutical composition for
10 use, of any one of the preceding embodiments, wherein the organ is selected from the group consisting of liver, kidney, lung, and spleen.

Embodiment 155. The method, use, or loaded LNP or pharmaceutical composition for use, of any one of the preceding embodiments, wherein the target tissue is selected from the group consisting of liver, kidney, lung, and spleen.

- 15 Embodiment 156. The method or loaded LNP or pharmaceutical composition for use of any one of the preceding embodiments, wherein the administering is performed parenterally.

Embodiment 157. The method or loaded LNP or pharmaceutical composition for use wherein the administering is performed intramuscularly, intradermally, subcutaneously, and/or intravenously.

- 20 Embodiment 158. The use of any one of the preceding claims, wherein the medicament is for parenteral administration.

Embodiment 159. The use of any one of the preceding claims, wherein the medicament is for intramuscular, intradermal, subcutaneous, and/or intravenous administration.

- Embodiment 160. The method, use, or loaded LNP or pharmaceutical composition for
25 use, of any one of the preceding embodiments, wherein the subject is human.

Equivalents

- [00343] It is to be understood that while the present disclosure has been described in conjunction with the detailed description thereof, the foregoing description is intended to illustrate and not limit the scope of the present disclosure, which is defined by the scope of
- 5 the appended claims. Other aspects, advantages, and alterations are within the scope of the following claims.

CLAIMS

1. A compound of Formula (A):

(A), or its N-oxide, or a salt or isomer thereof, wherein

m is selected from 5, 6, 7, 8, and 9;

- 5 R^2 and R^3 are each independently selected from the group consisting of H, C₁₋₁₄ alkyl, and C₂₋₁₄ alkenyl;

R^4 is selected from $-(CH_2)_nOH$, wherein n is selected from 1, 2, 3, 4, and 5, and

, wherein n_2 is selected from 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10; and R^{10} is -N(R)₂, wherein each R is independently selected from the group consisting of C₁₋₆ alkyl, C₂₋₃

- 10 alkenyl, and H;

M and M' are each independently selected from $-OC(O)O-$ and $-C(O)O-$;

wherein at least one of M and M' is $-OC(O)O-$;

R'^a is C₁₋₁₈ alkyl or C₂₋₁₈ alkenyl; and

R'' is a C₃-C₁₃ alkyl, optionally substituted with OH.

- 15 2. The compound of claim 1, wherein R'' is selected from

*, and **, where $\frac{*}{\sim}$ denotes a point of attachment with N, and $\frac{**}{\sim}$ denotes a point of attachment with M.

3. The compound of claim 1 or 2, wherein the compound has one of the following

structures:

4. The compound of any one of the preceding claims, wherein R^{α} is :
 wherein  denotes a point of attachment;
 $R^{\alpha\alpha}$, $R^{\alpha\beta}$, and $R^{\alpha\gamma}$ are each independently selected from the group consisting of H, C₁₋₁₂ alkyl, and C₂₋₁₂ alkenyl, wherein at least one of $R^{\alpha\alpha}$, $R^{\alpha\beta}$, and $R^{\alpha\gamma}$ is selected from the group
 5 consisting of C₁₋₁₂ alkyl and C₂₋₁₂ alkenyl; and
 R' is a C₁₋₁₂ alkyl or C₂₋₁₂ alkenyl.
5. The compound of claim 4, wherein $R^{\alpha\beta}$ and $R^{\alpha\gamma}$ are each H and $R^{\alpha\alpha}$ is C₁₋₆ alkyl.
6. The compound of claim 4, wherein $R^{\alpha\alpha}$ and $R^{\alpha\gamma}$ are each H and $R^{\alpha\beta}$ is C₁₋₆ alkyl.
7. The compound of claim 6, wherein $R^{\alpha\beta}$ is C₂ alkyl.
- 10 8. The compound of claim 4, wherein $R^{\alpha\alpha}$ and $R^{\alpha\beta}$ are each H and $R^{\alpha\gamma}$ is C₁₋₆ alkyl.
9. The compound of claim 8, wherein $R^{\alpha\gamma}$ is a C₅ or a C₆ alkyl.
10. The compound of any one of the preceding claims wherein R' is a C₅ or a C₆ alkyl.
11. The compound of any one of the preceding claims, wherein the compound has the

following structure:

- 15 12. The compound of any one of the preceding claims, wherein R^4 is $-(CH_2)_nOH$.
13. The compound of any one of the preceding claims, wherein R^4 is $-(CH_2)_2OH$.

14. The compound of any one of the preceding claims, wherein R^4 is

15. The compound of any one of the preceding claims, wherein R^4 is

16. The compound of any one of the preceding claims, wherein n_2 is 2 or 4.

17. A compound selected from:

18. An empty lipid nanoparticle (empty LNP) comprising a compound of any one of the preceding claims, a phospholipid, a structural lipid, and a PEG lipid.
19. The empty LNP of any one of the preceding claims, comprising about 40 mol % to about 60 mol % said compound, about 0 mol % to about 20 mol % phospholipid, about 30
5 mol % to about 50 mol % structural lipid, and about 0 mol % to about 5 mol % PEG lipid.
20. The empty LNP of any one of the preceding claims, wherein the phospholipid is selected from the group consisting of:
- 1,2-dilinoleoyl-sn-glycero-3-phosphocholine (DLPC),
 - 1,2-dimyristoyl-sn-glycero-phosphocholine (DMPC),
 - 10 1,2-dioleoyl-sn-glycero-3-phosphocholine (DOPC),
 - 1,2-dipalmitoyl-sn-glycero-3-phosphocholine (DPPC),
 - 1,2-distearoyl-sn-glycero-3-phosphocholine (DSPC),
 - 1,2-diundecanoyl-sn-glycero-phosphocholine (DUPC),
 - 1-palmitoyl-2-oleoyl-sn-glycero-3-phosphocholine (POPC),
 - 15 1,2-di-O-octadecenyl-sn-glycero-3-phosphocholine (18:0 Diether PC),
 - 1-oleoyl-2-cholesterylhemisuccinoyl-sn-glycero-3-phosphocholine (OChemPC),
 - 1-hexadecyl-sn-glycero-3-phosphocholine (C16 Lyso PC),
 - 1,2-dilinenoyl-sn-glycero-3-phosphocholine,
 - 1,2-diarachidonoyl-sn-glycero-3-phosphocholine,
 - 20 1,2-didocosahexaenoyl-sn-glycero-3-phosphocholine, 1,2-dioleoyl-sn-glycero-3-phosphoethanolamine (DOPE), 1,2-diphytanoyl-sn-glycero-3-phosphoethanolamine (ME 16.0 PE),
 - 1,2-distearoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-dilinoleoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-dilinenoyl-sn-glycero-3-phosphoethanolamine,
 - 25 1,2-diarachidonoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-didocosahexaenoyl-sn-glycero-3-phosphoethanolamine,
 - 1,2-dioleoyl-sn-glycero-3-phospho-rac-(1-glycerol) sodium salt (DOPG), sphingomyelin, and mixtures thereof.

21. The empty LNP of any one of the preceding claims, wherein the structural lipid is selected from the group consisting of cholesterol, fecosterol, sitosterol, ergosterol, campesterol, stigmasterol, brassicasterol, and mixtures thereof.

22. The empty LNP of any one of the preceding claims, wherein the PEG lipid is selected
 5 from the group consisting of a PEG-modified phosphatidylethanolamine, a PEG-modified phosphatidic acid, a PEG-modified ceramide, a PEG-modified dialkylamine, a PEG-modified diacylglycerol, a PEG-modified dialkylglycerol, and mixtures thereof.

23. The empty LNP of any one of the preceding claims, wherein the PEG lipid is selected

and mixtures thereof.

24. A loaded lipid nanoparticle (loaded LNP), which comprises the empty LNP of any one of the preceding claims and one or more therapeutic and/or prophylactic agents.

25. The loaded LNP of any one of the preceding claims, wherein the one or more
 15 therapeutic and/or prophylactic agents is a nucleic acid.

26. The loaded LNP of any one of the preceding claims, wherein the nucleic acid is an RNA, and wherein the RNA is selected from the group consisting of a short interfering RNA (siRNA), an asymmetrical interfering RNA (aiRNA), a RNA interference (RNAi) molecule, a microRNA (miRNA), an antagomir, an antisense RNA, a ribozyme, a Dicer-substrate RNA
 20 (dsRNA), a small hairpin RNA (shRNA), a messenger RNA (mRNA), and mixtures thereof.

27. The loaded LNP of any one of the preceding claims, wherein the RNA is an mRNA.

28. A pharmaceutical composition comprising the loaded LNP of any one of the preceding claims and a pharmaceutically acceptable carrier.

29. A method of delivering a therapeutic and/or prophylactic agent to a cell within a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding claims.
30. A method of specifically delivering a therapeutic and/or prophylactic agent to an
5 organ of a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding claims.
31. A method of producing a polypeptide of interest in a cell within a subject, the method comprising administering to the subject the loaded LNP of any one of the preceding claims.
32. A method of treating a disease or disorder in a subject in need thereof, the method
10 comprising administering to the subject a therapeutically effective amount of the loaded LNP of any one of the preceding claims.
