

Embossing Material for Embossing Lithography

Abstract

5 The invention relates to an embossing material that can be hardened and used for embossing lithography, consisting of a mixture of:

- At least one polymerizable main component, and
- At least one secondary component.

10 In addition, this invention relates to a use of an embossing material according to one of the preceding claims for the primary forming of an embossing form (4, 4', 4'', 4''', 4^{IV}).
