

ABSTRACT

ACCESSIBLE AIRCRAFT LAVATORY

5 An accessible lavatory unit (103) for an aircraft cabin (102) is disclosed. The lavatory
unit (103) is configurable between an able-bodied configuration and a PRM-
accessible configuration. In the able-bodied configuration the lavatory unit has a first
internal floor space (132) and there is a cabin floor space (130) external to the
lavatory unit (103). The lavatory unit (103) is expandable into the PRM-accessible
10 configuration in which the lavatory unit (103) is expanded to have a second internal
floor space (132), the second internal floor space (132) encompassing a region of the
cabin floor space (130). A sink for an aircraft lavatory unit is also disclosed.
