

MOBILE CARD PAYMENT SYSTEM

Abstract of the Disclosure

Disclosed is a mobile card payment system that allows a customer to pay charges with a card through his/her mobile phone and allows the customer to conveniently select or change mobile card payment service providers. The mobile card payment system includes a mobile card payment terminal, and a mobile card payment service gateway which is connected to the mobile card payment terminal over a wireless network and is connected to a plurality of payment authorization request servers over a leased line or Internet.
