

A DRAIN PLUG

ABSTRACT

A drain plug 100 comprising a trap holder 102, a cover element 104 and a discharge channel 138 is disclosed herein. The trap holder 102 comprises a holder opening 108, a discharge outlet 132; and a reservoir 134 comprising an inner reservoir portion 130 configured to define the discharge outlet 132, a reservoir base 128 and an outer reservoir portion. The cover element 104 comprises a canopy member 122; and a cover edge 126 extending from the canopy member 122 and into the reservoir 134. The cover element 104 is arranged to direct liquid received from the holder opening 108 to the reservoir 134 for holding liquid. The discharge channel 138 is configured to discharge overflow liquid from the reservoir 134 to the discharge outlet 132, and the discharge channel 138 is disposed further away from the reservoir base 128 than the cover edge 126 of the cover element 104.
