

ABSTRACT

There is provided a technology capable of analyzing business KPIs that make it possible to obtain a plurality of solutions which are harmonized as a whole in consideration of the feasibility. A KPI evaluation system 100 is a system for evaluating a KPI(s) (Key Performance Indicator(s)) related to business of a stakeholder, wherein a computer including at least a processor 101, a memory 102, and a storage device 103: defines a relationship between challenges of respective stakeholders regarding two or more stakeholders including the above-mentioned stakeholder; and associates KPI settings of a stakeholder, which is not the above-mentioned stakeholder, with the challenges of the respective stakeholders based on the defined relationship between the challenges.
