WO 01/43146 A1

(54) Title: NON-SILICONE CONDUCTIVE PASTE FOR THE ELECTRICAL INDUSTRY, AND ITS USE

(57) Abstract: A conductive paste based on an elastomer of the polyoxypolyolefin type or on a member of the polyolefin family is described, provided with an admixture of conductive particles for the production, in the electronics industry, of a sealing element, of a contact element or of a heat-conduction element. This material is particularly suitable for the production of EMI-RFI gaskets, and, compared with materials known hitherto and based on silicone, has improved performance characteristics and environmental properties.
