

## **CUTTING BLADE**

### **ABSTRACT OF THE DISCLOSURE**

A cutting blade includes an annular hub, and an annular blade. The hub and the blade are joined together between their first surfaces via an adhesive. The blade has a first region including an outer peripheral edge of the blade, and a second region inside the first region. The first region has first recessed portions existing in the first surface of the blade. The second region has, in the first surface of the blade, second recessed portions having a greater width than that of the first recessed portions existing in the first surface. The adhesive is in contact with the second region of the blade.
