

ABSTRACT

The present invention is a liquid detergent composition for tableware and/or kitchen hard articles containing:

- (a) a nonionic surfactant with an HLB of 10.5 or less;
- (b) a surfactant selected from amine oxide-type surfactants, amphoteric surfactants, and nonionic surfactants with an HLB of 11 or more; and (c) an organic solvent with a logPow of 0 or more and 1.5 or less,

wherein a proportion of component (a) in all surfactants is 30 mass% or more and 85 mass% or less, a mass ratio of the content of (c) to the content of (a), $(c)/(a)$, is 1 or more and 10 or less, and a viscosity at 20° C is 20 mPa · s or less.
