

ABSTRACT

Embodiments of the present application belong to the technical field of data analysis, and disclose an operation data display method and apparatus, a device, and a storage medium. The method comprises : displaying an operation replay interface, the operation replay interface comprising an operation video replay area and an operation event list, the operation video replay area displaying an operation replay video and a playback progress bar, and the playback progress bar being positioned in association with an operation event in the operation event list; in response to a first trigger operation on the playback progress bar, skipping in the operation playback video to play back a first operation interface, and marking in the operation event list a first operation event corresponding to a first playback time point; and in response to a second trigger operation on a second operation event in the operation event list, marking a second operation event, and positioning the playback progress bar at a second playback time point corresponding to the second operation event. Bidirectional associated positioning between an operation event list and a playback progress bar is achieved, and the operation data display effect is optimized.
