Declarations under Rule 4.17:

- as to applicant's entitlement to apply for and be granted a patent (Rule 4.17(ii))
- as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii))

(54) Title: MODULAR IDENTITY VERIFICATION SYSTEM AND METHOD

100
FIG. 1B

(57) Abstract: A modular identity verification system includes an agent interface module (AIM) that interacts with at least one traveler interface module and one or more processors using computer instructions which when executed by the one or more processors causes the one or more processors to perform the function of arrayed parallel processing of traveler biometric inputs and credential inputs from the at least one traveler interface module and from a second traveler interface module. The traveler interface module can have one or more processors configured for at least biometric capture and recognition and for document scanning of credentials. In some embodiments, the modular identity verification system further includes a visual signaling indicating system that indicates a status to an agent and at least a waiting traveler.
