(54) Title: RECORDING OF A TRICK PLAY SIGNAL ON A RECORD CARRIER (57) Abstract A recording apparatus for recording a first information signal, comprising packets of information and a trick play signal comprising packets of information comprise a time stamp generator for generating time stamps for the packets. The first digital information signal is meant for a reproduction at a record carrier speed which equals the recording speed and the second digital signal is meant for a reproduction at a speed n_1 times the recording speed. The time stamp generator comprises a first counter for generating subsequent cycles of subsequent first count values so as to supply time stamps for said packets of said first digital information signal and a second counter for generating subsequent cycles of subsequent second count values so as to supply time stamps for said packets in said second digital information signal, said first counter supplying said first count values at a first rate, said second counter supplying said second count values at a second rate, which equals said first rate divided by n_1.
