

ABSTRACT

Embodiments of the present application provide a video stream playing control method and apparatus, a device, and a storage medium. The method comprises: in a situation that a human-computer interaction entrance invoking triggering condition is satisfied, stopping
5 playing a first video stream, and invoking a human-computer interaction entrance for the first video stream while displaying a playing picture of the first video stream; after target feedback information is obtained by means of the human-computer interaction entrance or an instruction for closing the human-computer interaction entrance is received, closing the human-computer interaction entrance, and playing a second video stream different from the
10 first video stream, the target feedback information comprising feedback information for the first video stream. According to the method, feedback information is obtained by invoking the human-computer interaction entrance for the first video stream when displaying the playing picture of the first video stream, so that the feedback of a user to the currently played first video stream can be obtained more accurately in a targeted manner.
