

E-BILL MAIL PROCESSING

ABSTRACT

One or more embodiments of this specification disclose e-bill mail processing methods and apparatuses. The method includes following: To-be-processed identification information used to
5 identify an organization corresponding to a target bill mail is determined; the to-be-processed identification information is matched with identification information corresponding to each organization included in a pre-established bill mail template library; a bill link included in the target bill mail is obtained based on a matching result; and an e-bill corresponding to the target bill mail is obtained based on the bill link.
