402
Receive, by a receiving device of a computing system, a one-time number, wherein the one-time number is comprised of at least an identification value and a remaining value
404
Execute, by a querying module of the computing system, a query on a memory of the computing system to identify a routing number based on at least a portion of the one-time number
406
Generate, by a generation module of the computing system, a data value, wherein the data value includes at least the identified routing number and the remaining value
408
Electronically transmit, by a transmitting device of the computing system, the generated data value to an external system via payment rails associated with a payment network
