Abstract

Tower for loading and unloading a liquefied gas storage tank

The invention relates to a loading and unloading assembly (10) of a liquefied gas storage tank (2), the loading and unloading assembly (10) comprising at least one loading tower (12), an unloading device (14) and at least one cover (16), the loading tower (12) comprising a structure (18) comprising at least three poles (20) and a loading pipe, the unloading device (14) comprising at least one unloading pipe (36), a suction member (38) and a drive assembly (42), the cover (16) being arranged between the suction member (38) and the drive assembly (42), the unloading pipe (36) of the unloading device (14) being separate from the poles (20) of the structure (18) of the loading tower (12) and being arranged outside a perimeter delimited by said structure (18) of the loading tower (12).
