Auction System For Travel Packages, Computer Program Product And Method Thereof

Abstract

This invention relates to a method of conducting a travel package auction for clients comprising the steps of: a) informing said clients of the details of a travel package; b) collecting bids from said clients to form data; c) transmitting said data to a travel package provider; d) receiving from said travel package provider the number of bids in said data which are able to be provided by said travel package provider to said clients, and e) advising said clients of whether their bids were successful.

This invention also relates to a travel package auction system having at least one server and a plurality of clients, said system including:

means for informing said clients of a travel package;

means for collecting bids from said clients to form data; transmitting said data to a travel package provider; receiving from said travel package provider the number of bids in said data which are able to be provided by said travel package provider to said clients, and advising said clients of whether their bids are successful.

This invention also relates to a computer program product.
