

## ABSTRACT

An air-conditioning control computation unit of an air-conditioning control device of an embodiment performs air-conditioning control computation based on computational data and output air-conditioning control computation resultant data, and a gateway unit refers to conversion definition information used to convert data preliminarily stored in a conversion definition information storage unit, and convert air-conditioning control original data to computational data for the air-conditioning control computation, or convert the air-conditioning control computation resultant data acquired as a result of the air-conditioning control computation to air-conditioning control data used for air-conditioning control at the air-conditioning facility.
