(54) Title: METHODS AND SYSTEMS TO APPLY DIGITAL INTERVENTIONS BASED ON MACHINE LEARNING MODEL OUTPUT

FIG. 1

(57) Abstract: A system and a method for providing a digital intervention relating to user interactions. A system may have at least one processor configured to perform operations comprising: receiving input data from at least one client device; accessing a data model configured to determine, based on historical data, risk levels associated with the user interactions; inserting the input data into the data model; receiving, from the data model, an indication that at least one determined risk level associated with the user interactions exceeds a preset threshold; and providing, in response to the at least one determined risk level exceeding the preset threshold, the digital intervention.
