

wherein, R<sup>1</sup>-R<sup>3</sup> are described in detail below. The compounds of the present disclosure are potent inhibitors of MALT1.

Disclosed is a compound represented by the general formula (I), its tautomeric form, its stereoisomer, its polymorph, its solvate, its pharmaceutically acceptable salt, its combinations with suitable medicament and its pharmaceutical compositions, wherein, R<sup>1</sup>-R<sup>3</sup> are described in detail below.

In one aspect, there is provided 1-(6-(2H-1,2,3-Triazol-2-yl)-5-(trifluoromethyl)pyridin-3-yl)-3-(7-(1-methoxyethyl)-2-methylthiazolo[5,4-b]pyridin-6-yl)urea or a pharmaceutically acceptable salt thereof.

In another aspect, there is provided 1-(6-(2H-1,2,3-Triazol-2-yl)-5-(trifluoromethyl)pyridin-3-yl)-3-(7-(1-methoxyethyl)-2-methylthiazolo[5,4-b]pyridin-6-yl)urea.

The present disclosure provides a pharmaceutical composition, containing the compound of the general formula (I) as defined herein, its tautomeric form, and its stereoisomer, its polymorph, its solvate, its pharmaceutically acceptable salt in combination with the usual pharmaceutically employed carriers, diluents, and the like are useful for the treatment of a disease or disorder mediated through MALT1.

The present disclosure provides a pharmaceutical composition, containing the compound of the general formula (I) as defined herein, its tautomeric form, its stereoisomer, its polymorph, its solvate, and its pharmaceutically acceptable salt in combination with the usual pharmaceutically employed carriers, diluents, and the like are useful for the treatment of a disease or disorder such as cancer, inflammation or inflammatory disease or disorder, or allergic or autoimmune disease or disorder.
