

DRAWINGS

Fig.1 Relationship of
frictional resistance increase rate FIR(%) and Rz^2/RSm

Fig.2 Relationship of FIR(%) and Razz

Fig.3

Relationship of
Frictional resistance increase rate FIR(%) and RSm

Fig. 4 Roughness distribution of a coating film of an actual ship bottom (Replica method/Evaluation length 30 mm)

- (1) Sample number 15
 Mean Rz = 60.7 μm
 Mean RSm = 4909 μm
 Estimation FIR = 2.0 (%)

- (2) Sample number 15
 Mean Rz = 80.1 μm
 Mean RSm = 3481 μm
 Estimation FIR = 4.8 (%)

- (3) Sample number 12
 Mean Rz = 87.3 μm
 Mean RSm = 3711 μm
 Estimation FIR = 5.4 (%)

- (4) Sample number 9
 Mean Rz = 79.7 μm
 Mean RSm = 4417 μm
 Estimation FIR = 3.8 (%)

Fig. 5

Example of roughness acquisition of a coating film of an actual ship bottom

Fig.6

Estimation example of frictional resistance increase rate FIR(%)
