COSMETIC CONTAINER HAVING A COOPERATING  
COSMETIC CARRIER AND INNER SLEEVE

\*G00002\*

Abstract of the Disclosure

A cosmetic container having an inner sleeve and cosmetic carrier which cooperate to provide requisite torque and prevent angular movement therebetween. The cosmetic carrier includes a plurality of radially outwardly extending, vertical ribs and the inner sleeve includes a plurality of radially inwardly extending, vertical ribs. The cosmetic carrier is positioned within the inner sleeve wherein the ribs of one member cooperate with the ribs of the other. When the inner sleeve is rotated so as to extend or retract the cosmetic carrier, the inwardly extending ribs of the inner sleeve engage the outwardly extending ribs of the cosmetic carrier. When the cosmetic carrier is fully extended or fully retracted, the inwardly extending ribs of the inner sleeve and the outwardly extending ribs of the carrier are disengaged.
