

PACKAGING CONTAINER

ABSTRACT

A packaging container (1) includes a housing part
(21) that houses a content, a flange part (22) provided on
5 an outer circumference of an opening of the housing part
(21) integrally with the housing part (21), a sealing
ridge (23) provided on a top face of the flange part (22),
annularly formed over an entire circumference of the
flange part (22) so as to be protruded upward, and having
10 a first protrusion (23a) that protrudes outward in a plane
direction of the flange part (22) at a position
corresponding to an opening start part, and a second
protrusion (24) provided on the top face of the flange
part (22) so as to be protruded upward, and forming a gap
15 along an inner face of the first protrusion (23a) on an
inner circumferential side of the first protrusion (23a)
of the sealing ridge (23).
