COMPOSITION & USE FOR REDUCING ADENOSINE LEVELS & TREATING ASTHMA & OTHER DISEASES & CONDITIONS AFFLICTING THE AIRWAYS WITH AN EPIANDROSTERONE, A UBIQUINONE, OR BOTH

ABSTRACT

A pharmaceutical composition comprises an amount of an epiandrosterone, ubiquinone or both that is effective for reducing adenosine levels and treating asthma and airway diseases associated with them. The composition optionally comprises folinic acid or its salts, other therapeutic agents, formulation ingredients and a pharmaceutically or veterinarily acceptable carrier.
