(54) Title: METHODS FOR MAKING LIGHT OLEFINS BY DEHYDROGENATION THAT UTILIZE COMBUSTION ADDITIVES

FIG. 1

(57) Abstract: A method for making light olefins by dehydrogenation may include operating a catalytic dehydrogenation process, monitoring a composition of a combustion gas in the combustor to detect a concentration of one or more hydrocarbons, and selectively adding a combustion additive with the catalyst when the combustion gas comprises one or more hydrocarbons in an amount greater than 5% of a lower flammability level of the combustion gas at a temperature and pressure of the combustor. The combustion additive may comprise from 0.1 wt.% to 10 wt.% of gallium, from 100 parts per million by weight (ppmw) to 10,000 ppmw of manganese, from 0 ppmw to 100 ppmw of noble metals, and at least 85 wt.% support. In other embodiments, the combustion additive may comprise from 0.1 wt.% to 10 wt.% of chromium, from 0 ppmw to 100 ppmw of gallium and noble metals, and at least 85 wt.% support.
